CURRICULUM AND ASSESSMENT POLICY STATEMENT

GRADES 1-3

MATHEMATICS

DISCLAIMER

In view of the stringent time requirements encountered by the Department of Basic Education to effect the necessary editorial changes and layout to the Curriculum and Assessment Policy Statements and the supplementary policy documents, possible errors may occur in the said documents placed on the official departmental websites.

There may also be vernacular inconsistencies in the language documents at Home-, First and Second Additional Language levels which have been translated in the various African Languages. Please note that the content of the documents translated and versioned in the African Languages are correct as they are based on the English generic language documents at all three language levels to be implemented in all four school phases.

If any editorial, layout or vernacular inconsistencies are detected, the user is kindly requested to bring this to the attention of the Department of Basic Education.

FOREWORD BY THE MINISTER

Our national curriculum is the culmination of our efforts over a period of seventeen years to transform the curriculum bequeathed to us by apartheid. From the start of democracy we have built our curriculum on the values that inspired our Constitution (Act 108 of 1996). The Preamble to the Constitution states that the aims of the Constitution are to:

- heal the divisions of the past and establish a society based on democratic values, social justice and fundamental human rights;
 - improve the quality of life of all citizens and free the potential of each person;
 - lay the foundations for a democratic and open society in which government is based on the will of the people and every citizen is equally protected by law; and
- build a united and democratic South Africa able to take its rightful place as a sovereign state in the family of nations.

Education and the curriculum have an important role to play in realising these aims.

In 1997 we introduced outcomes-based education to overcome the curricular divisions of the past, but the experience of implementation prompted a review in 2000. This led to the first curriculum revision: the *Revised National Curriculum Statement Grades R-9* and the *National Curriculum Statement Grades 10-12* (2002).

Ongoing implementation challenges resulted in another review in 2009 and we revised the *Revised National Curriculum Statement* (2002) to produce this document.

From 2012 the two 2002 curricula, for *Grades R-9* and *Grades 10-12* respectively, are combined in a single document and will simply be known as the *National Curriculum Statement Grades R-12*. The *National Curriculum Statement for Grades R-12* builds on the previous curriculum but also updates it and aims to provide clearer specification of what is to be taught and learnt on a term-by-term basis.

The *National Curriculum Statement Grades R-12* accordingly replaces the Subject Statements, Learning Programme Guidelines and Subject Assessment Guidelines with the

- (a) Curriculum and Assessment Policy Statements (CAPS) for all approved subjects listed in this document;
- (b) *National policy pertaining to the programme and promotion requirements of the National Curriculum Statement Grades R-12*; and
- (c) *National Protocol for Assessment Grades R-12*.

A handwritten signature in black ink, appearing to read 'Angie Motshekga'.

MRS ANGIE MOTSHEKGA, MP
MINISTER OF BASIC EDUCATION

SECTION 1 INTRODUCTION AND BACKGROUND

1.1 BACKGROUND

The *National Curriculum Statement Grades R - 12 (NCS)* stipulates policy on curriculum and assessment in the schooling sector.

To improve implementation, the *National Curriculum Statement* was amended, with the amendments coming into effect in January 2012. A single comprehensive *Curriculum and Assessment Policy* document was developed for each subject to replace *Subject Statements*, *Learning Programme Guidelines* and *Subject Assessment Guidelines* in Grades R - 12.

1.2 OVERVIEW

- (a) The *National Curriculum Statement Grades R - 12 (January 2012)* represents a policy statement for learning and teaching in South African schools and comprises the following:
- (i) National Curriculum and Assessment Policy Statements for each approved school subject;
 - (ii) The policy document, *National policy pertaining to the programme and promotion requirements of the National Curriculum Statement Grades R - 12*; and
 - (iii) The policy document, *National Protocol for Assessment Grades R - 12 (January 2012)*.
- (b) The *National Curriculum Statement Grades R - 12 (January 2012)* replaces the two current national curricula statements, namely the
- (i) *Revised National Curriculum Statement Grades R - 9*, Government Gazette No. 23406 of 31 May 2002, and
 - (ii) *National Curriculum Statement Grades 10 - 12 Government Gazettes*, No. 25545 of 6 October 2003 and No. 27594 of 17 May 2005.
- (c) The national curriculum statements contemplated in subparagraphs (a) and (b) comprise the following policy documents which will be incrementally repealed by the *National Curriculum Statement Grades R - 12 (January 2012)* during the period 2012-2014:
- (i) The Learning Area/Subject Statements, Learning Programme Guidelines and Subject Assessment Guidelines for Grades R - 9 and Grades 10 - 12;
 - (ii) The policy document, National Policy on assessment and qualifications for schools in the General Education and Training Band d, promulgated in Government Notice No. 124 in Government Gazette No. 29626 of 12 February 2007;
 - (iii) The policy document, the National Senior Certificate: A qualification at Level 4 on the National Qualifications Framework (NQF), promulgated in Government Gazette No.27819 of 20 July 2005;
 - (iv) The policy document, An addendum to the policy document, the National Senior Certificate: A qualification at Level 4 on the National Qualifications Framework (NQF), regarding learners with special

needs, published in Government Gazette, No.29466 of 11 December 2006, is incorporated in the policy document, National policy pertaining to the programme and promotion requirements of the National Curriculum Statement Grades R - 12; and

- (v) The policy document, An addendum to the policy document, the National Senior Certificate: A qualification at Level 4 on the National Qualifications Framework (NQF), regarding the National Protocol for Assessment (Grades R - 12), promulgated in Government Notice No.1267 in Government Gazette No. 29467 of 11 December 2006.
- (c) The policy document, National policy pertaining to the programme and promotion requirements of the National Curriculum Statement Grades R - 12, and the sections on the Curriculum and Assessment Policy as contemplated in Chapters 2, 3 and 4 of this document constitute the norms and standards of the National Curriculum Statement Grades R - 12. It will therefore, in terms of section 6A of the South African Schools Act, 1996 (Act No. 84 of 1996,) form the basis for the Minister of Basic Education to determine minimum outcomes and standards, as well as the processes and procedures for the assessment of learner achievement to be applicable to public and independent schools.

1.3 GENERAL AIMS OF THE SOUTH AFRICAN CURRICULUM

- (a) The *National Curriculum Statement Grades R - 12* gives expression to the knowledge, skills and values worth learning in South African schools. This curriculum aims to ensure that children acquire and apply knowledge and skills in ways that are meaningful to their own lives. In this regard, the curriculum promotes knowledge in local contexts, while being sensitive to global imperatives.
- (b) The National Curriculum Statement Grades R - 12 serves the purposes of:
 - equipping learners, irrespective of their socio-economic background, race, gender, physical ability or intellectual ability, with the knowledge, skills and values necessary for self-fulfilment, and meaningful participation in society as citizens of a free country;
 - providing access to higher education;
 - facilitating the transition of learners from education institutions to the workplace; and
 - providing employers with a sufficient profile of a learner's competences.
- (c) The National Curriculum Statement Grades R - 12 is based on the following principles:
 - Social transformation: ensuring that the educational imbalances of the past are redressed, and that equal educational opportunities are provided for all sections of the population;
 - Active and critical learning: encouraging an active and critical approach to learning, rather than rote and uncritical learning of given truths;
 - High knowledge and high skills: the minimum standards of knowledge and skills to be achieved at each grade are specified and set high, achievable standards in all subjects;
 - Progression: content and context of each grade shows progression from simple to complex;
 - Human rights, inclusivity, environmental and social justice: infusing the principles and practices of social and environmental justice and human rights as defined in the Constitution of the Republic of South Africa. The National Curriculum Statement Grades R - 12 is sensitive to issues of diversity such as poverty, inequality, race, gender, language, age, disability and other factors;

- Valuing indigenous knowledge systems: acknowledging the rich history and heritage of this country as important contributors to nurturing the values contained in the Constitution; and
 - Credibility, quality and efficiency: providing an education that is comparable in quality, breadth and depth to those of other countries.
- (d) The National Curriculum Statement Grades R - 12 aims to produce learners that are able to:
- identify and solve problems and make decisions using critical and creative thinking;
 - work effectively as individuals and with others as members of a team;
 - organise and manage themselves and their activities responsibly and effectively;
 - collect, analyse, organise and critically evaluate information;
 - communicate effectively using visual, symbolic and/or language skills in various modes;
 - use science and technology effectively and critically showing responsibility towards the environment and the health of others; and
 - demonstrate an understanding of the world as a set of related systems by recognising that problem solving contexts do not exist in isolation.
- (e) Inclusivity should become a central part of the organisation, planning and teaching at each school. This can only happen if all teachers have a sound understanding of how to recognise and address barriers to learning, and how to plan for diversity.

The key to managing inclusivity is ensuring that barriers are identified and addressed by all the relevant support structures within the school community, including teachers, District-Based Support Teams, Institutional-Level Support Teams, parents and Special Schools as Resource Centres. To address barriers in the classroom, teachers should use various curriculum differentiation strategies such as those included in the Department of Basic Education's *Guidelines for Inclusive Teaching and Learning* (2010).

1.4 TIME ALLOCATION

1.4.1 Foundation Phase

(a) The instructional time in the Foundation Phase is as follows:

SUBJECT	GRADE R (HOURS)	GRADES 1-2 (HOURS)	GRADE 3 (HOURS)
Home Language	10	7/8	7/8
First Additional Language			
Mathematics			
Life Skills	6	6	7
• Beginning Knowledge	(1)	(1)	(2)
• Creative Arts	(2)	(2)	(2)
• Physical Education	(2)	(2)	(2)
• Personal and Social Well-being	(1)	(1)	(1)
TOTAL	23	23	25

(b) Instructional time for Grades R, 1 and 2 is 23 hours and for Grade 3 is 25 hours.

(c) Ten hours are allocated for languages in Grades R-2 and 11 hours in Grade 3. A maximum of 8 hours and a minimum of 7 hours are allocated for Home Language and a minimum of 2 hours and a maximum of 3 hours for Additional Language in Grades R - 2. In Grade 3 a maximum of 8 hours and a minimum of 7 hours are allocated for Home Language and a minimum of 3 hours and a maximum of 4 hours for First Additional Language.

(d) In Life Skills Beginning Knowledge is allocated 1 hour in Grades R - 2 and 2 hours as indicated by the hours in brackets for Grade 3.

1.4.2 Intermediate Phase

(a) The instructional time in the Intermediate Phase is as follows:

SUBJECT	HOURS
Home Language	6
First Additional Language	5
Mathematics	6
Natural Science and Technology	3,5
Social Sciences	3
Life Skills	4
• Creative Arts	(1,5)
• Physical Education	(1)
• Personal and Social Well-being	(1,5)
TOTAL	27,5

1.4.3 Senior Phase

(a) The instructional time in the Senior Phase is as follows:

SUBJECT	HOURS
Home Language	5
First Additional Language	4
Mathematics	4,5
Natural Science	3
Social Sciences	3
Technology	2
Economic Management Sciences	2
Life Orientation	2
Arts and Culture	2
TOTAL	27,5

1.4.4 Grades 10-12

(a) The instructional time in Grades 10-12 is as follows:

Subject	Time allocation per week (hours)
i. Home Language	4.5
ii. First Additional Language	4.5
iii. Mathematics	4.5
iv. Life Orientation	2
v. Group B of the policy document, <i>National policy pertaining to the programme and promotion requirements of the National Curriculum Statement Grades R - 12,</i>	12 (3x4h)

The allocated time per week may be utilised only for the minimum required NCS subjects as specified above, and may not be used for any additional subjects added to the list of minimum subjects. Should a learner wish to offer additional subjects, additional time must be allocated for the offering of these subjects.

SECTION 2: DEFINITION, AIMS, SKILLS & CONTENT

2.1. INTRODUCTION

In Section 2, the Foundation Phase Mathematics Curriculum and Assessment Policy Statement (CAPS) provides teachers with a definition of mathematics, specific aims, specific skills, focus of content areas, weighting of content areas, recommended resources for the Foundation Phase Mathematics lessons, suggested guidelines on supporting learners with barriers to learning Mathematics, mental mathematics and enhancing the teaching of early numeracy skills in Grade R.

2.2. WHAT IS MATHEMATICS?

Mathematics is a language that makes use of symbols and notations for describing numerical, geometric and graphical relationships. It is a human activity that involves observing, representing and investigating patterns and qualitative relationships in physical and social phenomena and between mathematical objects themselves. It helps to develop mental processes that enhance logical and critical thinking, accuracy and problem-solving that will contribute to decision-making.

2.3. SPECIFIC AIMS

The teaching and learning of Mathematics aims to develop the following in the learner:

- critical awareness of how mathematical relationships are used in social, environmental, cultural and economic relations;
- confidence and competence to deal with any mathematical situation without being hindered by a fear of Mathematics;
- a spirit of curiosity and a love of Mathematics;
- appreciation for the beauty and elegance of Mathematics;
- recognition that Mathematics is a creative part of human activity;
- deep conceptual understanding in order to make sense of Mathematics; and
- acquisition of specific knowledge and skills necessary for:
 - the application of Mathematics to physical, social and mathematical problems,;
 - the study of related subject matter (e.g. other subjects); and
 - further study in Mathematics.

2.4. SPECIFIC SKILLS

To develop essential mathematical skills the learner should:

- develop the correct use of the language of Mathematics;
- develop number vocabulary, number concept and calculation and application skills;
- learn to listen, communicate, think, reason logically and apply the mathematical knowledge gained;
- learn to investigate, analyse, represent and interpret information;

- learn to pose and solve problems; and
- build an awareness of the important role that Mathematics plays in real-life situations, including the personal development of the learner.

2.5. FOCUS OF CONTENT AREAS

Mathematics in the Foundation Phase covers five content areas. Each content area contributes to the acquisition of specific skills. The table below shows the general focus of the content areas as well as the specific focus of the content areas for the Foundation Phase.

Table 2.1 Foundation Phase Mathematics Content Focus

MATHEMATICS CONTENT KNOWLEDGE		
Content Area	General Content Focus	Foundation Phase Specific Content Focus
Numbers, Operations and Relationships	<p>Development of number sense that includes:</p> <ul style="list-style-type: none"> • the meaning of different kinds of numbers; • the relationship between different kinds of numbers; • the relative size of different numbers; • representation of numbers in various ways; and • the effect of operating with numbers. 	<p>The number range developed by the end of Grade 3 includes whole numbers to at least 1 000 and common fractions. In this phase, the learners' number concept is developed through working with physical objects to count collections of objects, partition and combine quantities, skip count in various ways, solve contextual (word) problems, and build up and break down numbers.</p> <ul style="list-style-type: none"> • Counting enables learners to develop number concept, mental mathematics, estimation, calculation skills and recognition of patterns. • Number concept development helps learners to learn about properties of numbers and to develop strategies that can make calculations easier. • Solving problems in context enables learners to communicate their own thinking orally and in writing through drawings and symbols. • Learners build an understanding of basic operations of addition, subtraction, multiplication and division. • Learners develop fraction concept through solving problems involving the sharing of physical quantities and by using drawings. Problems should include solutions that result in whole number remainders or fractions. Sharing should involve not only finding parts of wholes, but also finding parts of collections of objects. In this phase, learners are not expected to read or write fraction symbols.
Patterns, Functions and Algebra	<p>Algebra is the language for investigating and communicating most of Mathematics and can be extended to the study of functions and other relationships between variables. A central part of this content area is for the learner to achieve efficient manipulative skills in the use of algebra. It also focuses on the:</p> <ul style="list-style-type: none"> • description of patterns and relationships through the use of symbolic expressions, graphs and tables; and • identification and analysis of regularities and change in patterns, and relationships that enable learners to make predictions and solve problems. 	<p>In this phase, learners work with both</p> <ul style="list-style-type: none"> • number patterns (e.g. skip counting); and • geometric patterns (e.g. pictures). <p>Learners should use physical objects, drawings and symbolic forms to copy, extend, describe and create patterns.</p> <p>Copying the pattern helps learners to see the logic of how the pattern is made.</p> <p>Extending the pattern helps learners to check that they have properly understood the logic of the pattern.</p> <p>Describing the pattern helps learners to develop their language skills.</p> <p>Focussing on the logic of patterns lays the basis for developing algebraic thinking skills.</p> <p>Number patterns support number concept development and operational sense built in Numbers, Operations and Relationships.</p> <p>Geometric patterns include sequences of lines, shapes and objects but also patterns in the world. In geometric patterns learners apply their knowledge of space and shape.</p>

<p>Space and Shape (Geometry)</p>	<p>The study of Space and Shape improves understanding and appreciation of the pattern, precision, achievement and beauty in natural and cultural forms. It focuses on the</p> <ul style="list-style-type: none"> • properties, relationships; • orientations, positions; and • transformations of two-dimensional shapes and three-dimensional objects. 	<p>In this phase learners focus on three-dimensional (3-D) objects, two-dimensional (2-D) shapes, position and directions.</p> <ul style="list-style-type: none"> • Learners explore properties of 3-D objects and 2-D shapes by sorting, classifying, describing and naming them. • Learners draw shapes and build with objects. • Learners recognise and describe shapes and objects in their environment that resemble mathematical objects and shapes. • Learners describe the position of objects, themselves and others using the appropriate vocabulary. • Learners follow and give directions.
<p>Measurement</p>	<p>Measurement focuses on the selection and use of appropriate units, instruments and formulae to quantify characteristics of events, shapes, objects and the environment. It relates directly to the learner’s scientific, technological and economic worlds, enabling the learner to:</p> <ul style="list-style-type: none"> • make sensible estimates; and • be alert to the reasonableness of measurements and results. 	<ul style="list-style-type: none"> • In this phase the learners’ concept of measurement is developed by working practically with different concrete objects and shapes, learning the properties of length, capacity, mass, area and time. • Learners measure the properties of shapes and objects using informal units where appropriate, such as hands, paces, containers, etc. • Learners compare different quantities by using comparative words such as taller/shorter, heavier/lighter etc. • Learners are introduced to standard units such as grams, kilograms; millilitres, litres; centimetres, metres. • Activities related to time should be structured with the awareness that learners’ understanding of the passing of time should be developed before they read about time.

2.6. WEIGHTING OF CONTENT AREAS

The weighting of mathematics content areas serves two primary purposes: firstly the weighting gives guidance on the amount of time needed to address the content within each content area adequately; secondly the weighting gives guidance on the spread of content in assessment. The weighting of the content areas is not the same for each grade in the Foundation Phase.

Table 2.2 Weighting of Content Areas in Foundation Phase

WEIGHTING OF CONTENT AREAS			
Content Area	Grade 1	Grade 2	Grade 3
Numbers, Operations and Relationships*	65%	60%	58%
Patterns, Functions and Algebra	10%	10%	10%
Space and Shape (Geometry)	11%	13%	13%
Measurement	9%	12%	14%
Data Handling (Statistics)	5%	5%	5%
	100%	100%	100%

*In Grade R - 3, it is important that the area of Numbers, Operations and Relationships is the main focus of Mathematics. Learners need to exit the Foundation Phase with a secure number sense and operational fluency. The aim is for learners to be competent and confident with numbers and calculations. For this reason the notional time allocated to Numbers Operations and Relationships has been increased. Most of the work on patterns should focus on number patterns to consolidate learners’ number ability further.

2.7. MATHEMATICS IN THE FOUNDATION PHASE

Foundation Phase Mathematics forges the link between the child’s pre-school life and life outside school on the one hand, and the abstract Mathematics of the later grades on the other hand. In the early grades children should be exposed to mathematical experiences that give them many opportunities “to do, talk and record” their mathematical thinking.

The amount of time spent on Mathematics has a decisive impact on learners' development of mathematical concepts and skills. The activities learners engage in should, however, not be "keep busy" activities, but should be clearly focused on the mathematics as outlined in the curriculum.

2.7.1 Suggested guidelines for classroom management

All the time allocated to Mathematics on a single day should be considered as one period. During the Mathematics period the following should usually happen:

- **Whole class activity**
 - Mental mathematics
 - Consolidation of concepts
 - Classroom management (allocation of independent activities, etc.)
- **Small group teaching**
 - Counting
 - Number concept development (oral and practical activities)
 - Problem-solving (oral and practical activities)
 - Written recording
 - Developing calculating strategies (oral and practical activities)
 - Patterns
 - Space and shape
 - Measurement
 - Data Handling
- **Independent work**

Learners practise and consolidate concepts developed in whole class and small group teaching.

Whole class activity: where the focus will be mainly on mental mathematics, consolidation of concepts and allocation of independent activities for at least 20 minutes per day at the start of the Mathematics lesson. During this time the teacher will also work with the whole class to determine and record (where appropriate) the name of the day, the date, the number of learners present and absent, and the nature of the weather. Mental mathematics will include brisk mental starters such as "the number after/before 8 is; 2 more/less than 8 is; $4+2$; $5+2$, $6+2$ " etc. During this time the teacher can also consolidate concepts that are a little challenging. Also important is that the teacher should assign the class their general class activity as well as independent activities that they do on their own while she gets on with the small group focused sessions.

Small group focused lessons: are most effective when the teacher takes a small group of learners (8 to 12) who have the same ability with her on the floor or at their tables, while the rest of the class is engaged in independent activities. The teacher works **orally** and **practically** with the learners, engaging in such activities as counting, estimation, number concept development and problem-solving activities, as well as activities concerning pattern, space and shape, measurement and data handling, which should be carefully planned for.

In order to reinforce learning, written work (work book, work sheet examples, work cards etc.) should form part of the group session where possible. Learners should have writing materials (class work books, etc.) available for problem-

solving activities. The group sessions should be very interactive and learners should be encouraged to “**do, talk, demonstrate and record**” their mathematical thinking.

Teachers should take care not to underestimate the slower learners; they should also be stretched. It is easier to match the difficulty level of the work to the learners if the group the teacher is working with is of approximately equal ability. However, mixed ability groups can work well for construction, measurement and patterning or sorting activities, or for games.

Independent activities: While the teacher is busy with the small group focused lesson, the rest of the class must be purposefully engaged in a variety of mathematical activities that focus on reinforcing and consolidating concepts and skills that have already been taught during small group focused lessons. These independent activities should be differentiated to cater for different ability levels. Independent activities may include:

- work book activities;
- graded worksheets/work cards for counting, manipulating numbers, simple problems in context (word problems), etc.;
- mathematics games like Ludo, dominoes, jigsaw puzzles; and
- tasks that involve construction, sorting, patterning or measurement.

The Mathematics period should also provide for supporting learners experiencing barriers to learning, enrichment activities for high flyers, assessment activities, etc.

Both independent and small group focused lesson activities must be observed (practical, oral), marked and overseen (written recording) by the teacher as part of her informal and formal assessment activities.

Close tracking of learners’ responses (verbal, oral, practical, written recording) in learning and teaching situations enables the teacher to do continuous assessment, monitor learners’ progress and plan support accordingly for learners experiencing barriers to learning.

2.7.2 Learners with barriers to learning Mathematics

It is important for learners who experience barriers to learning Mathematics to be exposed to activity-based learning. Practical examples using concrete objects together with practical activities should be used for a longer time than with other learners, as moving to abstract work too soon may lead to frustration and regression. These learners may require and should be granted more time for:

- completing assessment activities and tasks; and
- acquiring thinking skills (own strategies)

The number of activities to be completed should be adapted to the learner without compromising the concept and skills that are addressed.

2.7.3 Mental mathematics

Mental mathematics plays a very important role in the curriculum. The number bonds and multiplication table facts that learners are expected to know or recall fairly quickly are listed for each grade. In addition, mental mathematics is used extensively to explore the higher number ranges through skip counting and by doing activities such as “up and down the number ladder”, e.g. the Grade teacher might ask the following “chained” questions: “Start with 796. Make

that 7 more. Yes, it is 803. Make that 5 less. Yes, it is 798. Make that 10 more ... 2 more ... 90 more ... 5 less ...” etc. These activities help learners to construct a mental number line.

Mental mathematics therefore features strongly in both the counting and the number concept development sections relating to the topics Number and Patterns, and may also occur during Measurement and Data Handling activities. When doing mental mathematics, the teacher should never force learners to do mental calculations that they cannot handle — writing materials and/or counters should always be available for those learners who may need them.

2.8 GRADE R

The approach to learning Mathematics should be based on the principles of integration and play-based learning. The teacher should be pro-active, a mediator rather than a facilitator. A mediator makes the most of incidental learning opportunities that arise spontaneously during a range of child-centred activities such as free play in the fantasy corner or block construction site, sand and water play activities as well as teacher-guided activities that focus on mathematical concepts such as counting, number concept development, space and shape, patterns, time and other emergent mathematics activities. Colour is not in itself a mathematical concept, but can be used to promote the acquisition of mathematical concepts in activities such as sorting, grouping and classifying.

All aspects of Grade R, including the classroom environment and teaching and learning practice, should promote the holistic development of the child. Development that is an integral part of emergent numeracy includes cognitive development (problem-solving, logical thought and reasoning), language development (the language of mathematics) and perceptual-motor as well as emotional and social development. All these aspects can be developed through stories, songs, rhymes, finger games and water play, educational toys including board games, construction and exploration activities (mass, time, capacity, measurement, etc.), imaginative play, outdoor play and “playground games”. Many kinds of games and play could include aspects of numeracy, for example measuring during cooking or counting during shopping.

In other words, the acquisition of emergent mathematics and related mathematical concepts should, like all good teaching, adhere to the following learning principles where children move through three stages of learning, namely:

- the kinaesthetic stage (experience concepts with the body and senses);
- the concrete stage (3-D, using a variety of different objects such as blocks, bottle tops, twigs and other objects in the environment); and
- paper and pencil representation (semi-concrete representations using drawings, matching cards etc.)

In the Grade R year the timetable is called **the daily programme** (see Figure 1) and it comprises three main components, namely:

- teacher-guided activities;
- routines; and
- child-initiated activities or free play.

The emphasis throughout should be on using these aspects of the daily programme to promote the acquisition of emergent numeracy in a fun and spontaneous context. For example, teacher-guided numeracy learning opportunities are offered during ring time. Most rings can be given a mathematical focus. The early morning ring when children are greeted and a roll-call is taken provides an opportunity for playing with numbers and, for example, counting. Other rings, such as the Mathematics ring, perceptual-motor rings, movement, music and science rings can also provide a Mathematics focus.

Creative art activities could also have a mathematical emphasis, for example, using geometric shapes such as circles and squares to make a collage or designing a pattern to frame a picture. The weather chart, calendar and birthday rings also provide opportunities for exploring mathematical concepts. It is the teacher's knowledge and initiative that can maximise learning potential.

- *Routines*, where children participate actively, such as snack time, arrival, home time and toilet routines, can also be given a Mathematics focus. Children wearing red, for example, go to the toilet first (colour and ordinal number), each child gets a plate and a sandwich (one-to-one correspondence), Thandi would like a second sandwich, David doesn't want any more. What this amounts to is identifying and utilising a teachable moment, in other words, being a mediator of learning.
- During *free play* the teacher can promote **emergent mathematics** through the appropriate structuring of the free-play area. Outdoor free play such as climbing on a wooden climbing frame or riding on the cycle track might promote the acquisition of key mathematical vocabulary such as up/down, bottom/top, fast/slow, high/low, etc. Sand and water play will also enhance the understanding of concepts such as mass, volume and capacity. All these activities will also promote essential underpinning perceptual-motor skills, which become an inherent part of the successful acquisition in formal school of literacy and numeracy. Examples of these skills are:
 - developing an understanding of your position in space e.g. behind, in front, underneath or next to an object (this can, for example, be linked to place value in mathematics); and
 - directionality and laterality (this can be linked to number and letter formation and reading from left to right).

The practice outlined above is illustrative of a Grade R approach that promotes problem-solving, logical thinking and reasoning, as well as education for citizenship because of its focus on co-operative learning and negotiation. By utilising teachable moments, a teacher can encourage children to reflect on their decisions and predict possibilities, e.g. whether they think a container being used in water play will hold more than another container.

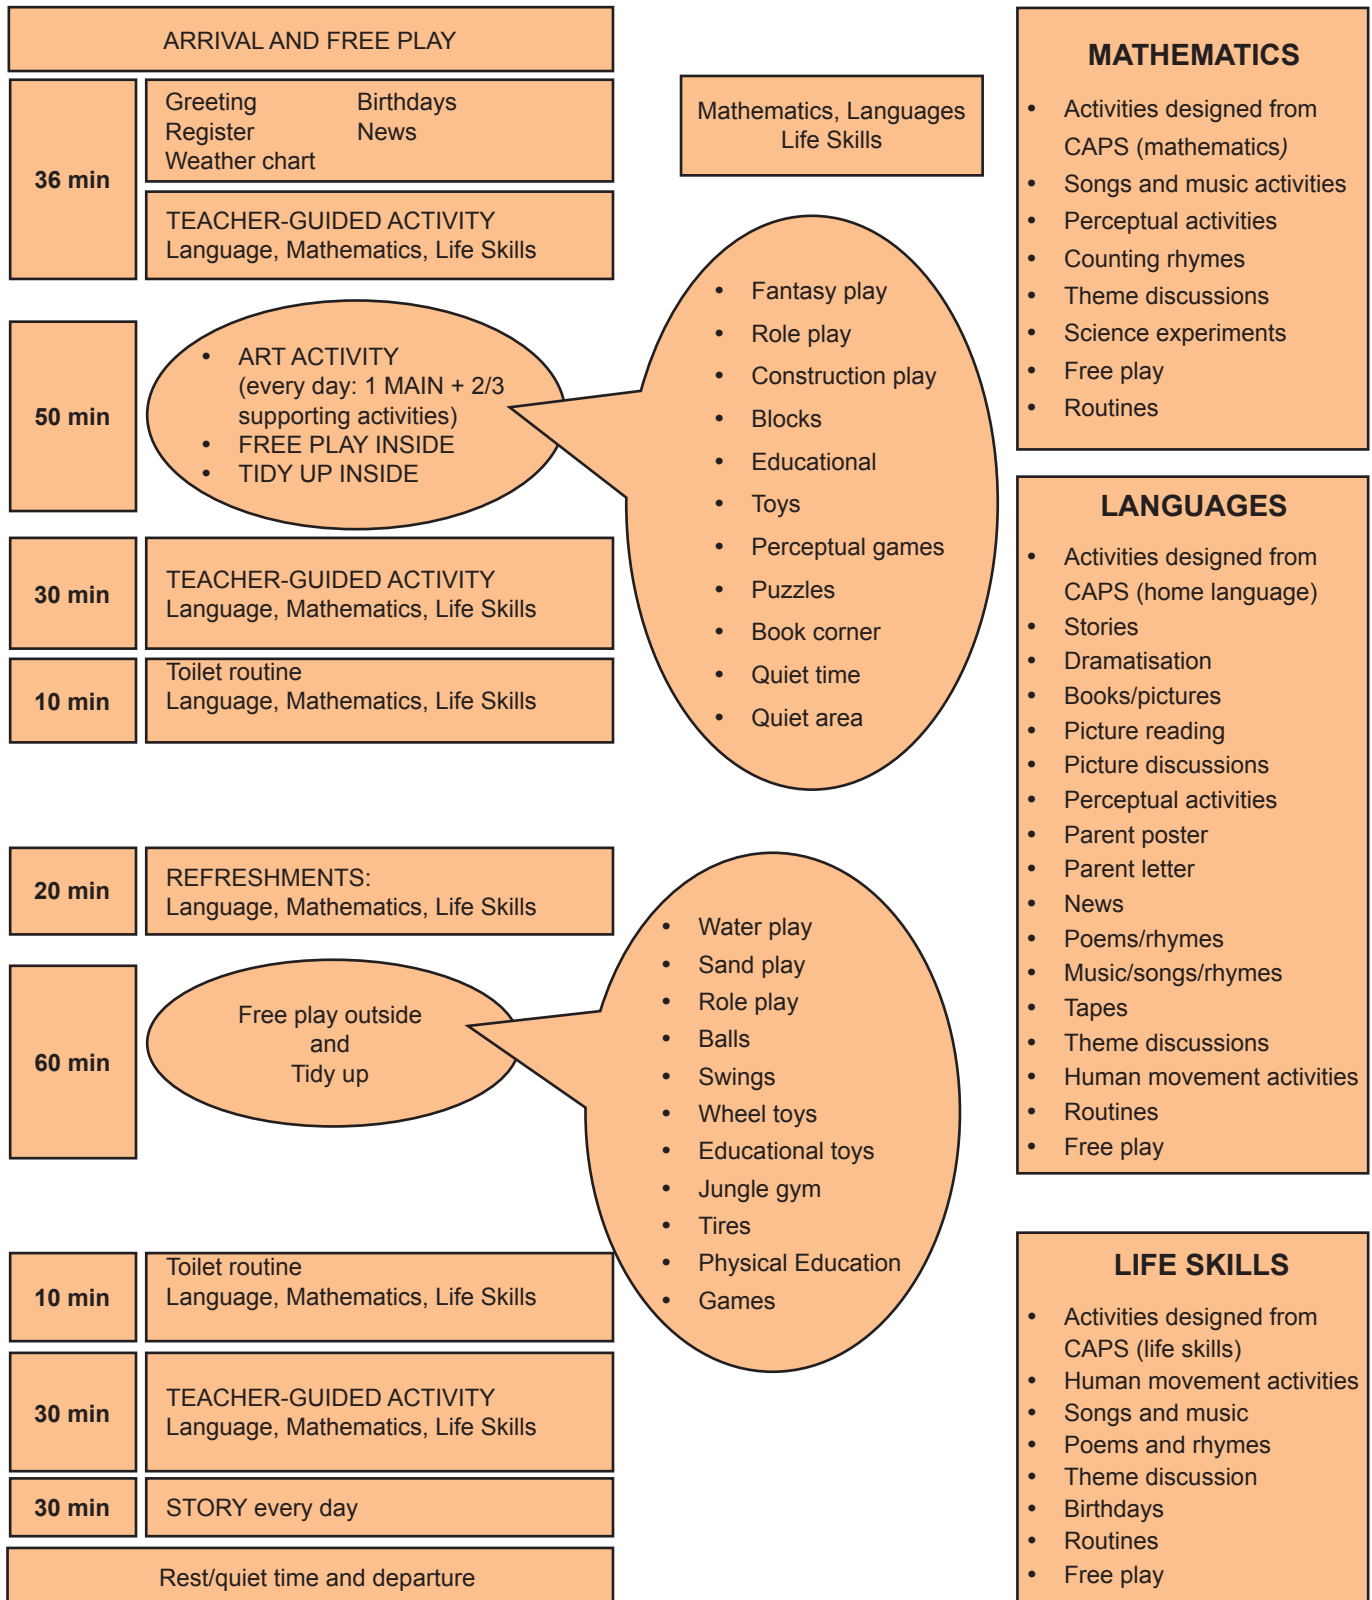

By making helpful suggestions and inviting a child to think about alternative positions and ways of problem-solving, a teacher can encourage children to think more deeply about an issue and find good reasons for the choices they make. In this way not only mathematical but also *holistic development* is addressed and critical premises underpinning CAPS are brought into play.

Assessment practices in Grade R should be informal and children should not be subjected to a 'test' situation. For this reason assessment activities have not been included in the Grade R CAPS. Each activity used for assessment should be carefully planned so that it integrates a variety of skills.

In Grade R most of the assessment takes place through observation, with the teacher recording the results of the assessment using a checklist. Thus, as the year progresses a full picture of each child, complete with challenges and strengths, is gradually built. This allows for challenges to be addressed and strengths to be maximised.

A traditional, formal classroom-based learning programme that is tightly structured and 'basics bound' should be avoided, as it does not optimise numeracy acquisition for the Grade R child. Grade R should not be a 'watered down' Grade 1 class. It has its own unique characteristics based on how children in this age group make sense of their world and acquire the knowledge, skills, values and attitudes that will allow them to maximise the opportunities afforded in the formal learning years.

**Figure 1: Grade R daily programme
(From ± 7:30 - 13:00)**

2.9 RECOMMENDED RESOURCES FOR THE FOUNDATION PHASE MATHEMATICS CLASSROOM

- Counters
- Large dice
- A big counting frame
- A height chart
- Big 1 - 100 and 101 - 200 number grid posters (100 - charts)
- Different number lines (vertical and horizontal)
- A set of Flard cards (expanding cards)
- Play money — coins and notes
- A calendar for the current year
- A large analogue wall clock
- A balance scale
- Building blocks
- Modelling clay
- A variety of boxes of different shapes and sizes brought from home
- A variety of plastic bottles and containers to describe and compare capacities
- Good examples of a sphere (ball), a rectangular prism (box), cube, cone, pyramid and cylinder. The teacher can make this herself.
- A number of plastic or cardboard squares, different rectangles, circles, different triangles all of different sizes
- Mathematical games, e.g. Ludo, Snakes and Ladders, Jigsaw Puzzles, Dominoes, Tangrams etc.
- Essential for Grades R and 1:
 - Areas for sand and water play
 - Apparatus for climbing, balancing, swinging and skipping
 - A play-shop with items to be bought with play-money
 - A variety of appropriate games such as 'what's in a square'?
 - Blocks

SECTION 3 CONTENT SPECIFICATION AND CLARIFICATION

3.1. INTRODUCTION

In the General Education and Training band there are five content areas in Mathematics:

- Numbers, Operations and Relationships
- Patterns, Functions and Algebra
- Space and Shape (Geometry)
- Measurement
- Data Handling

Each content area is broken down into mathematical topics, for example in Space and Shape in the Foundation Phase one topic is two-dimensional shapes. Concepts and skills are specified within each topic. Section 3 of the Foundation Phase Mathematics CAPS specifies and clarifies the Mathematics content required.

3.2 SPECIFICATION OF CONTENT TO SHOW PROGRESSION

The phase overview tables show the specification of concepts and skills and the progression from Grade R to 3. The grade overview tables show the progression of concepts and skills across the four terms of the year.

However, in certain topics the concepts and skills are similar in two or three successive grades. The clarification of content will give guidelines on how progression should be addressed in these cases. The specification of content should therefore be read in conjunction with the clarification of content.

The **Foundation Phase overview** shows progression of content areas: Numbers, Operations and Relationships, Patterns, Functions and Algebra, Space and Shape (Geometry), Measurement and Data Handling across Grades R to 3 as outlined in the following tables:

FOUNDATION PHASE OVERVIEW
1. NUMBERS, OPERATIONS AND RELATIONSHIPS

Progression in Numbers, Operations and Relationships

- The main progression in Numbers, Operations and Relationships happens in three ways:
 - The number range increases.
 - Different kinds of numbers are introduced.
 - The calculation strategies change.
- As the number range for doing calculations increases up to Grade 3, learners should develop more efficient strategies for calculations.
- Contextual problems should take account of the number range for the grade as well as the calculation competencies of learners. . .

TOPICS	GRADE R	GRADE 1	GRADE 2	GRADE 3
NUMBER CONCEPT DEVELOPMENT: Count with whole numbers				
1.1 Count objects	Count concrete objects Estimate and count to at least 10 everyday objects reliably.	Count concrete objects Estimate and count to at least 50 everyday objects reliably. Counting by grouping is encouraged.	Count concrete objects Estimate and count to at least 200 everyday objects reliably. Counting by grouping is encouraged.	Count concrete objects Estimate and counts to at least 1000 everyday objects reliably. Counting by grouping is encouraged.
1.2 Count forwards and backwards	Count forwards and backwards in ones from 1 to 10 Use number rhymes and songs	Count forwards and backwards in ones from any number between 0 and 100. Count forwards in: <ul style="list-style-type: none"> • 10s from any multiple of 10 between 0 and 100 • 5s from any multiple of 5 between 0 and 100 • 2s from any multiple of 2 between 0 and 100 	Count forwards and backwards in: <ul style="list-style-type: none"> • 1s from any number between 0 and 200 • 10s from any multiple of 10 between 0 and 200 • 5s from any multiple of 5 between 0 and 200 • 2s from any multiple of 2 between 0 and 200 • 3s from any multiple of 3 between 0 and 200 • 4s from any multiple of 4 between 0 and 200 	Counts forwards and backwards in: <ul style="list-style-type: none"> • 1s from any number between 0 and 1000 • 10s from any multiple of 10 between 0 and 1000 • 5s from any multiple of 5 between 0 and 1000 • 2s from any multiple of 2 between 0 and 1000 • 3s from any multiple of 3 between 0 and 1000 • 4s from any multiple of 4 between 0 and 1000 • in 20s, 25s, 50s, 100s to at least 1000

TOPICS	GRADE R	GRADE 1	GRADE 2	GRADE 3
NUMBER CONCEPT DEVELOPMENT: Represent whole numbers				
	Say and use number names in familiar context.			
1.3 Number symbols and number names	<p>Recognise, identify and read number symbols</p> <ul style="list-style-type: none"> Recognise, identify and read number symbols 1 to 10 Recognise, identify and read number names 1 to 10 	<p>Recognise, identify and read number symbols</p> <ul style="list-style-type: none"> Recognise, identify and read number symbols 1 to 100 Write number symbols 1 to 20 Recognise, identify and read number names 1 to 10 Write number names 1 to 10 	<p>Recognise, identify and read number symbols</p> <ul style="list-style-type: none"> Recognise, identify and read number symbols 0 to 200 Write number symbols 0 to 200 Recognise, identify and read number names 0 to 100 Write number names 0 to 100 	<p>Recognise, identify and read number symbols</p> <ul style="list-style-type: none"> Recognise, identify and read number symbols 0 to 1 000 Write number symbols 0 to 1 000 Recognise, identify and read number names 0 to 1 000. Write number names 0 to 1 000
NUMBER CONCEPT DEVELOPMENT: Describe, compare and order whole numbers				
1.4 Describe, compare and order numbers	<p>Describe, compare and order collection of objects up to 10.</p> <ul style="list-style-type: none"> Describe whole numbers up to 10 Compare which of two given collection of objects is big, small, smaller than, greater than, more than, less than, equal to, most, least, fewer up 10. Order more than two given collections of objects from smallest to greatest up to 10 	<p>Describe, compare and order objects up to 20</p> <ul style="list-style-type: none"> Describe and compare collections of objects according to most, least, the same as Describe and order collections of objects from most to least and least to most 		

TOPICS	GRADE R	GRADE 1	GRADE 2	GRADE 3
NUMBER CONCEPT DEVELOPMENT: Describe, compare and order whole numbers				
1.4 Describe, compare and order numbers	<p>Describe, compare and order numbers to 20</p> <ul style="list-style-type: none"> Describe and compare whole numbers according to smaller than, greater than and more than, less than, is equal to Describe and order numbers from smallest to greatest and greatest to smallest <p>Use ordinal numbers to show order, place or position</p> <p>Develop an awareness of ordinal numbers e.g. first, second, third up to sixth and last</p>	<p>Describe, compare and order numbers to 20</p> <ul style="list-style-type: none"> Describe and compare whole numbers according to smaller than, greater than, less than, is equal to Describe and order numbers from smallest to greatest and greatest to smallest <p>Use ordinal numbers to show order, place or position</p> <p>Position objects in a line from first to tenth or first to last e.g. first, second, third ... tenth</p>	<p>Describe, compare and order numbers to 99</p> <ul style="list-style-type: none"> Describe and compare whole numbers up to 99 using smaller than, greater than, more than, less than and equal to Describe and order whole numbers up to 99 from smallest to greatest, and greatest to smallest <p>Use ordinal numbers to show order, place or position</p> <p>Position objects in a line from first to twentieth or first to last e.g. first, second, third ... twentieth</p>	<p>Describe, compare and order numbers to 999</p> <ul style="list-style-type: none"> Describe and compare whole numbers up to 999 using smaller than, greater than, more than, less than and equal to Describe and order whole numbers up to 999 from smallest to greatest, and greatest to smallest <p>Use ordinal numbers to show order, place or position</p> <p>Use, read and write ordinal numbers, including abbreviated form (1st, 2nd, 3rd up to 31st)</p>
NUMBER CONCEPT DEVELOPMENT: Place value				
1.5 Place value		<p>Begin to recognise the place value of at least two-digit numbers to 20</p> <ul style="list-style-type: none"> Decompose two-digit numbers into multiples of 10 and ones/units 	<p>Recognise the place value of at least two-digit numbers to 99</p> <ul style="list-style-type: none"> Decompose two-digit numbers up to 99 into multiples of 10 and ones/units Identify and state the value of each digit 	<p>Recognise the place value of three-digit numbers to 999</p> <ul style="list-style-type: none"> Decompose three-digit numbers up to 999 into multiples of 100, multiples of 10 and ones/units Identify and state the value of each digit
SOLVE PROBLEMS IN CONTEXT				
1.6 Problem-solving techniques	<p>Use the following techniques up to 10:</p> <ul style="list-style-type: none"> concrete apparatus e.g. counters physical number ladder 	<p>Use the following techniques when solving problems and explain solutions to problems:</p> <ul style="list-style-type: none"> concrete apparatus e.g. counters pictures to draw the story sum building up and breaking down numbers doubling and halving number lines supported by concrete apparatus 	<p>Use the following techniques when solving problems and explain solutions to problems:</p> <ul style="list-style-type: none"> drawings or concrete apparatus e.g. counters building up and breaking down of numbers doubling and halving number lines 	<p>Use the following techniques when solving problems and explain solutions to problems:</p> <ul style="list-style-type: none"> building up and breaking down numbers doubling and halving number lines rounding off in tens

TOPICS	GRADE R	GRADE 1	GRADE 2	GRADE 3
1.7 Addition and subtraction	Solve word problems (story sums) in context and explain own solution to problems involving addition and subtraction with answers up to 10.	Solve word problems in context and explain own solution to problems involving addition and subtraction with answers up to 20.	Solve word problems in context and explain own solution to problems involving addition and subtraction with answers up to 99.	Solve word problems in context and explain own solution to problems involving addition and subtraction leading answers up to 999.
1.8 Repeated addition leading to multiplication		Solve word problems in context and explain own solution to problems involving repeated addition with answers up to 20	Solve word problems in context and explain own solution to problems using repeated addition and multiplication with answers up to 50.	Solve word problems in context and explain own solution to problems using multiplication with answers up to 100
1.9 Grouping and sharing leading to division	Solve and explain solutions to word problems in context (story sums) that involve equal sharing, grouping with whole numbers up to 10 and answers that may include remainders.	Solve and explain solutions to practical problems involving equal sharing and grouping with whole numbers up to 20 and with answers that may include remainders.	Solves and explain solutions to practical problems that involve equal sharing and grouping up to 50 with answers that may include remainders.	Solve and explain solutions to practical problems that involve equal sharing and grouping up to 100 with answers that may include remainders
SOLVE PROBLEMS IN CONTEXT				
1.10 Sharing leading to fractions			Solve and explain solutions to practical problems that involve equal sharing leading to solutions that include unitary fractions.	Solve and explain solutions to practical problems that involve equal sharing leading to solutions that include unitary and non-unitary fractions.
1.11 Money	Develop an awareness of South African coins and bank notes	<ul style="list-style-type: none"> Recognise and identify the South African coins (5c, 10c, 20c, 50c, R1, R2, R5) and bank notes R10 and R20 Solve money problems involving totals and change to R20 and in cents up to 20c 	<ul style="list-style-type: none"> Recognise and identify the South African coins (5c, 10c, 20c, 50c, R1, R2, R5) and bank notes R10, R20, R50 Solve money problems involving totals and change to R99 and in cents up to 90c 	<ul style="list-style-type: none"> Recognise and identify all the South African coins and bank notes Solve money problems involving totals and change in rands or cents Convert between rands and cents
CONTEXT-FREE CALCULATIONS

Recognise fractions in diagrammatic form Begin to recognise that two halves or three thirds make one whole and that one half and two quarters are equivalent Write fractions as 1 half and 2 thirds.

FOUNDATION PHASE OVERVIEW
2. PATTERNS, FUNCTIONS AND ALGEBRA

Progression in Patterns, Functions and Algebra

- In Patterns, Functions and Algebra, learners get opportunities to:
 - complete and extend patterns represented in different forms ; and
 - identify and describe patterns.
- Describing patterns lays the basis for learners in the Intermediate Phase to describe rules for patterns. This in turn becomes more formalised in algebraic work in the Senior Phase.

TOPICS	GRADE R	GRADE 1	GRADE 2	GRADE 3
2.1 Geometric patterns	<p>Copy and extend Copy and extend simple patterns using physical objects and drawings (e.g. using colours and shapes).</p>	<p>Copy, extend and describe Copy, extend and describe in words</p> <ul style="list-style-type: none"> • simple patterns made with physical objects • simple patterns made with drawings of lines, shapes or objects <p>Create own patterns Create own geometric patterns</p> <ul style="list-style-type: none"> • with physical objects • by drawing lines, shapes or objects <p>Patterns around us Identify, describe in words and copy geometric patterns</p> <ul style="list-style-type: none"> • in nature • from modern everyday life • from our cultural heritage 	<p>Copy, extend and describe Copy, extend and describe in words</p> <ul style="list-style-type: none"> • simple patterns made with physical objects • complex patterns made with drawings of lines, shapes or objects <p>Create and describe own patterns</p> <ul style="list-style-type: none"> • with physical objects • by drawing lines, shapes or objects <p>Patterns around us Identify, describe in words and copy geometric patterns</p> <ul style="list-style-type: none"> • in nature • from modern everyday life • from our cultural heritage 	<p>Copy, extend and describe Copy, extend and describe in words</p> <ul style="list-style-type: none"> • simple patterns made with physical objects • more complex patterns made with drawings of lines, shapes or objects <p>Create and describe own patterns</p> <ul style="list-style-type: none"> • with physical objects • by drawing lines, shapes or objects <p>Patterns around us Identify, describe in words and copy geometric patterns</p> <ul style="list-style-type: none"> • in nature • from modern everyday life • from our cultural heritage

FOUNDATION PHASE OVERVIEW
3. SPACE AND SHAPE (GEOMETRY)

Progression in Space and Shape

The main progression in Space and Shape is achieved by:

- focussing on new properties and features of shapes and objects in each grade; and
- moving from learning the language of position and matching different views of the same objects to reading and following directions on informal maps.

TOPICS	GRADE R	GRADE 1	GRADE 2	GRADE 3
3.1 Position, orientation and views	<p>Language of position</p> <p>Describe the position of one object in relation to another e.g. on top of, in front of, behind, left, right, up, down, next to.</p>	<p>Language of position</p> <p>Describe the position of one object in relation to another e.g. on top of, in front of, behind, left, right, up, down, next to.</p> <p>Position and views</p> <ul style="list-style-type: none"> • Recognise and match different views of the same everyday object 	<p>Language of position</p> <p>Describe the position of one object in relation to another e.g. on top of, in front of, behind, left, right, up, down, next to.</p> <p>Position and views</p> <ul style="list-style-type: none"> • Recognise and match different views of the same everyday object. 	<p>Position and views</p> <ul style="list-style-type: none"> • Recognise and match different views of the same everyday object • Name an everyday object when shown an unusual view of it • Read, interpret and draw informal maps, or top views of a collection of objects • Find objects on maps
	<p>Position and directions</p> <p>Follow directions to move around the classroom</p>	<p>Position and directions</p> <ul style="list-style-type: none"> • Follow directions to move around the classroom • Follow instructions to place one object in relation to another, e.g. put the pencil behind the box 	<p>Position and directions</p> <p>Follow directions to move around the classroom</p>	<p>Position and directions</p> <ul style="list-style-type: none"> • Follow directions to move around the classroom and school • Give directions to move around the classroom and school • Follow directions from one place to another on an informal map

FOUNDATION PHASE OVERVIEW
4. MEASUREMENT

Progression in Measurement

- The main progression in measurement across the grades is achieved by the introduction of:
 - new forms of measuring;
 - new measuring tools, starting with informal tools and moving to formal measuring instruments in Grades 2 and 3;
 - new measuring units, particularly in Grades 2 and 3.
- Calculations and problem-solving with measurement should take cognisance of the number work that has already been covered.

TOPICS	GRADE R	GRADE 1	GRADE 2	GRADE 3

Know that a standard cup is 250 millilitres Know that a standard teaspoon is 5 millilitres (No conversions between millilitres and litres required)
4.5 Perimeter and Area				<p>Perimeter</p> <p>Investigate the distance around 2-D shapes and 3-D objects using direct comparison or informal units.</p> <p>Area</p> <p>Investigate the area using tiling.</p>

FOUNDATION PHASE OVERVIEW
5. DATA HANDLING

Progression in Data Handling		GRADE R	GRADE 1	GRADE 2	GRADE 3
TOPICS		GRADE R	GRADE 1	GRADE 2	GRADE 3
<p>Progression in Data Handling</p> <ul style="list-style-type: none"> The main progression in Data Handling across the grades is achieved by: <ul style="list-style-type: none"> moving from working with objects to working with data; and working with new forms of data representation. Learners should work through the full data cycle at least once a year - this involves collecting and organising data, representing data, analysing, interpreting and reporting data. Some of the above aspects of data handling can also be dealt with as discrete activities. 					
5.1 Collect and sort objects	Collect and organise objects Collect and sort everyday physical objects.	Collect and organise objects Collect and sort everyday physical objects.	Collect and organise objects Collect and sort everyday physical objects.		
5.2 Represent sorted collection of objects	Represent sorted collection of objects Draw a picture of collected objects.	Represent sorted collection of objects Draw a picture of collected objects.	Represent sorted collection of objects Draw a picture of collected objects.		
5.3 Discuss and report on sorted collection of objects	Discuss and report on sorted collection of objects Answer questions about <ul style="list-style-type: none"> how the collection was sorted the drawing of the collection 	Discuss and report on sorted collection of objects Answer questions about <ul style="list-style-type: none"> how the collection was sorted the drawing of the collection 	Discuss and report on sorted collection of objects <ul style="list-style-type: none"> Give reasons for how collection was sorted; Answer questions about <ul style="list-style-type: none"> how the sorting was done (process) what the sorted collection looks like (product) Describe the collection and/drawing Explain how the collection was sorted 		

TOPICS	GRADE R	GRADE 1	GRADE 2	GRADE 3

3.3 Clarification of content

In this content clarification section, teachers are provided with:

- the Grade R to 3 term overview;
- suggested sequencing of topics into terms: not all aspects of all topics are taught in each term; some aspects of some topics need to be taught before other aspects of those topics;
- suggested pacing of topics over the year. Just as some content areas require more time than others, so some topics require more time than others; and
- clarification notes and teaching guidelines with examples where appropriate.

Each content area has been broken down into topics. All content areas must be taught every term. The sequencing of topics into terms gives an idea of how topics can be spread and revised throughout the year. It is not necessary to teach all the topics in Space and Shape, Measurement and Data Handling every term. However, all topics must be taught during the year.

In Section 2 (paragraph 2.6) a weighting of content areas is provided. When this is combined with the hours available in the year one can calculate notional hours for each content area.

Teachers may choose to sequence (or order) and pace the content differently from the recommendations in this chapter. Teachers may also change the suggested amounts of time allocated to topics slightly. However, cognisance should be taken of the relative weighting and notional hours of the content areas for Foundation Phase Mathematics.

- **Grade R** Mathematics is in the form of emergent mathematics and is therefore not broken up into lesson times. The Grade R teacher should weave the mathematics into the learner' daily activities although time should be set aside during the day when the teacher focuses exclusively on a mathematical activity, otherwise the learners will not become aware of and develop the desired mathematical concepts and skills.
- Time for Grades 1 - 3 has been allocated in the following way:
 - **Seven hours are to be used for Mathematics per week** (10 weeks x 4 terms x 7 hours = 280 hours per year)
 - Every Mathematics lesson should be **1hour 24 minutes per day for Grades 1 to 3.**
 - This then means that there are four terms of 10 weeks with five daily (Monday to Friday) lessons per week.
 - Allow a week for orientation and consolidation at the start of each term, since young children tend to forget a lot of content during the holidays and they also get out of the rhythm of schooling. Allow a week at the end of each term for consolidation of concepts. This gives lessons.

3.4 Sequencing and pacing of content

The following tables are provided for each grade in Grade R - 3:

- Pacing of topics for the year (shows the spread of topics across terms and recommends the amount of time to spend on each topic of each Content Area)
- Sequencing of topics for the year (shows how topics have been allocated to the terms and the progression of content and skills across the terms)
- Clarification notes per topic - these tables provide content clarification and teaching guidelines for each topic as sequenced across terms.

Lesson Planning - Topic Allocation per Term

Number is the most important topic in Foundation Phase Mathematics. Most of the time each week, term and year is focused on Numbers, Operations and Relationships. On average three or more Mathematics lessons in each week should focus on Numbers, Operations and Relationships. The remaining time is split among the other content areas.

Space and Shape and Measurement require more time and attention than Data Handling and Patterns, Functions and Algebra. The tables below give an indication of how many lessons to allocate to each content area and topic for each grade in Patterns, Functions and Algebra, Space and Shape, Measurement and Data Handling:

- Grade R allocation of content areas and topics in lessons

As **Grade R** Mathematics is in the form of **emergent mathematics** and therefore the following suggested time allocation provides for both the focused mathematical episodes and the interwoven, informal activities. This is to ensure comprehensive coverage of all the content available. Emergent mathematics activities may be to count the number of plates and mugs to put out for their snack, counting games played outside, indoor games such as dominoes and jigsaw puzzles, etc. The teacher has to organise all the activities according to her learners' needs and the resources available in her classroom.

Shape and Space is an important part of the young learner's mathematical development, and should be spread out over the week, with some focused episodes under the guidance of the teacher, and many opportunities for construction, sand and water play by the learners.

Measurement should be incorporated in counting activities, e.g. estimation and counting when measuring distances with hands, feet and steps.

The attendance register and weather chart give ample opportunity for working with **Data Handling**.

Table 3.1: Time allocation per content area per week

Content Area	Topics	Suggested Time
Numbers, Operations and Relationships	Counting Number Recognition Identify and describe whole numbers Number sense Solving problems	120 minutes
Patterns, Functions and Algebra	Copy, extend and create own patterns	80 minutes
Space and Shape (Geometry)	Recognise, identify and name 2-D shapes/pictures Geometric shapes Build 3-D objects using concrete materials Spatial Relations Directionality	80 minutes
Measurement	Time Length Mass Capacity	80 minutes
Data Handling	Collect, sort, draw, read and represent data	60 minutes
TOTAL		420 minutes (7 hours per week)

- Allocation of content areas and topics in lessons for Grades 1 to 3

On average three lessons (i.e. between 4 and 4½ hours) a week are spent on Numbers, Operations and Relationships in Grades 1, 2 and 3. The remaining two lessons (i.e. between 2½ and 3 hours) are split among the topics of the other content areas in the manner recommended below.

Table 3.2: Recommended number of lessons per content area per term for Grade 1

CONTENT AREA	TOPIC	Number of Lessons				
		Term 1	Term 2	Term 3	Term 4	Total
Numbers, Operations and Relationships	All topics of Numbers, Operations and Relationships	22	30	28	25	105

3.4.1 Grade 1 overview per term

GRADE 1 OVERVIEW				
1. NUMBERS, OPERATIONS AND RELATIONSHIPS				
TOPICS	TERM 1	TERM 2	TERM 3	TERM 4
NUMBER CONCEPT DEVELOPMENT: Count with whole numbers				
1.1 Count objects	Count out concrete objects to 10 Give a reasonable estimate of a number of objects that can be checked by counting.	Count out objects reliably to 20 Give a reasonable estimate of a number of objects that can be checked by counting. Counting by grouping is encouraged	Count out objects reliably to 40 Give a reasonable estimate of a number of objects that can be checked by counting. Counting by grouping is encouraged	Count out objects reliably to 50 Give a reasonable estimate of a number of objects that can be checked by counting Counting by grouping is encouraged.
1.2 Count forwards and backwards	Count forwards and backwards in: • Ones from any number between 1 and 20	Count forwards and backwards in • Ones from any number between 0 and 50 Count forwards in • 10s from any multiple of 10 between 0 and 50 • 5s from any multiple of 5 between 0 and 50 • 2s from any multiple of 2 between 0 and 20	Count forwards and backwards in • Ones from any number between 0 and 80 Count forwards in • 10s from any multiple of 10 between 0 and 80 • 5s from any multiple of 5 between 0 and 80 • 2s from any multiple of 2 between 0 and 80	Count forwards and backwards in • Ones from any number between 0 and 100 Count forwards in • 10s from any multiple of 10 between 0 and 100 • 5s from any multiple of 5 between 0 and 100 • 2s from any multiple of 2 between 0 and 100
NUMBER CONCEPT DEVELOPMENT: Represent whole numbers				
1.3 Number symbols and number names	Recognise, identify and read numbers • Recognise, identify and read number symbols 1 to 20 • Write number symbols 1 to 5 • Recognise, identify and read number names 1 to 5 • Write number names 1 to 5	Recognise, identify and read numbers • Recognise, identify and read number symbols 1 to 50 • Write number symbols 1 to 10 • Recognise, identify and read number names 1 to 10 • Write number names 1 to 10	Recognise, identify and read numbers • Recognise, identify and read number symbols 1 to 80 • Write number symbols 1 to 20 • Recognise, identify and read number names 1 to 10 • Write number names 1 to 10	Recognise, identify and read numbers • Recognise, identify and read number symbols 1 to 100 • Write number symbols 1 to 20 • Recognise, identify and read number names 1 to 10 • Write number names 1 to 10

TOPICS	TERM 1	TERM 2	TERM 3	TERM 4
<p>1.4 Describe, compare and order numbers</p>	<p>Describe, compare and order up to 5 objects</p> <ul style="list-style-type: none"> Compare collection of objects according to many, few; most, least; more than, less than; the same as, just as many as, different Order collection of objects from most to least and least to most <p>Describe, compare and order numbers to 5</p> <ul style="list-style-type: none"> Describe and compare whole numbers according to smaller than, greater than, more than, "less than, is equal to Describe and order numbers: <ul style="list-style-type: none"> from smallest to greatest and greatest to smallest using the number line 1 - 5 	<p>Describe, compare and order up to 10 objects</p> <ul style="list-style-type: none"> Compare collection of objects according to many, few; most, least; more than, less than; the same as, just as many as, different Order collection of objects from most to least and least to most <p>Describe, compare and order numbers to 10</p> <ul style="list-style-type: none"> Describe and compare whole numbers according to smaller than, greater than, more than, "less than, is equal to Describe and order numbers: <ul style="list-style-type: none"> from smallest to greatest and greatest to smallest before, after, in the middle/ between using the number line 0 - 10 	<p>Describe, compare and order up to 15 objects</p> <ul style="list-style-type: none"> Compare collection of objects according to many, few; most, least; more than, less than; the same as, just as many as, different Order collection of objects from most to least and least to most <p>Describe, compare and order numbers to 15</p> <ul style="list-style-type: none"> Describe and compare whole numbers according to smaller than, greater than, more than, "less than, is equal to Describe and order numbers: <ul style="list-style-type: none"> from smallest to greatest and greatest to smallest before, after, in the middle/ between using the number line 0 - 15 	<p>Describe, compare and order up to 20 objects</p> <ul style="list-style-type: none"> Compare collection of objects according to many, few; most, least; more than, less than; the same as, just as many as, different Order collection of objects from most to least and least to most <p>Describe, compare and order numbers to 20</p> <ul style="list-style-type: none"> Describe and compare whole numbers according to smaller than, greater than, more than, "less than, is equal to Describe and order numbers: <ul style="list-style-type: none"> from smallest to greatest and greatest to smallest before, after, in the middle/ between using the number line 0 - 20 <p>Use ordinal numbers to show order, place or position</p> <ul style="list-style-type: none"> Position objects in a line from first to tenth or first to last e.g. first, second, third ... tenth, last Ordinal numbers in the range first to tenth

TOPICS	TERM 1	TERM 2	TERM 3	TERM 4
NUMBER CONCEPT DEVELOPMENT: Place value				
1.5 Place value			Recognise the place value of numbers 11 to 15 <ul style="list-style-type: none"> Decompose two-digit numbers into ten and ones e.g. 12 is 10 and 2 	Recognise the place value of numbers 11 to 19. <ul style="list-style-type: none"> Decompose two-digit numbers into ten and ones e.g. 18 is 10 and 8
SOLVE PROBLEMS IN CONTEXT				
1.6 Problem-solving techniques	Use the following techniques when solving problems and explain solutions to problems: <ul style="list-style-type: none"> concrete apparatus e.g. counters pictures to draw the story sum number lines supported by concrete apparatus e.g. counting beads 	Use the following techniques when solving problems and explain solutions to problems: <ul style="list-style-type: none"> concrete apparatus e.g. counters pictures to draw the story sum building up and breaking down numbers doubling and halving number lines supported by concrete apparatus e.g. counting beads 	Use the following techniques when solving problems and explain solutions to problems: <ul style="list-style-type: none"> concrete apparatus e.g. counters pictures to draw the story sum building up and breaking down numbers doubling and halving number lines supported by concrete apparatus e.g. counting beads 	Use the following techniques when solving problems and explain solutions to problems: <ul style="list-style-type: none"> concrete apparatus e.g. counters pictures to draw the story sum building up and breaking down numbers doubling and halving number lines supported by concrete apparatus e.g. counting beads
1.7 Addition and subtraction	Practically solve word problems in context and explain own solution to problems involving addition, subtraction with answers up to 5.	Solve word problems in context and explain own solution to problems involving addition, subtraction with answers up to 10.	Solve word problems in context and explain own solution to problems involving addition, subtraction with answers up to 15.	Solve word problems in context and explain own solution to problems involving addition, subtraction with answers up to 20.
1.8 Repeated addition leading to multiplication		Solve word problems in context and explain own solution to problems involving repeated addition with answers up to 10.	Solve word problems in context and explain own solution to problems involving repeated addition with answers up to 15.	Solve word problems in context and explain own solution to problems involving repeated addition with answers up to 20.
1.9 Grouping and sharing leading to division	Practically solve word problems in context and explain own solutions to problems involving equal sharing and grouping with whole numbers up to 5 and with answers that may include remainders.	Solve word problems in context and explain own solutions to problems involving equal sharing and grouping with whole numbers up to 10 and with answers that may include remainders	Solve word problems in context and explain own solutions to problems involving equal sharing and grouping with whole numbers up to 15 and with answers that may include remainders	Solve word problems in context and explain own solutions to problems involving equal sharing and grouping with whole numbers up to 20 and with answers that may include remainders.

Problem Types for Grade 1

These are examples of important problem types that the teacher needs to present repeatedly to her class. When the teacher works with a small group, she should pose the problem orally. When the learners can read, she can give them a written version of the problem as well, but she must still pose the problem orally.

Problems in context can be included in worksheets, but should then be short, straightforward and familiar, and the teacher must make sure that all the learners understand them.

Grouping

Grouping, discarding the remainder

Stella sells apples in bags of three apples each. She has 14 apples. How many bags of three apples each can she make up?

Grouping, incorporating the remainder in the answer

Ben wants to take 15 eggs to his grandmother. How many egg boxes that can take six eggs each does he need to pack all the eggs?

Sharing

Sharing, discarding the remainder

Share 14 sweets among three friends so that they all get the same number of sweets.

Repeated addition

How many wheels do four bicycles have?

Addition and subtraction

There are at least three basic types of addition and subtraction problems and each type can be posed in different ways. The basic types are:

Change

Noluthando had five apples. Silo gave her eight apples. How many apples does she have now?

Noluthando had 13 apples. She gave five apples to Silo. How many apples does she have now?

Combine

Nosisi has five green and eight blue marbles. How many marbles does she have?

Nosisi has 13 marbles. Five are green and the rest are blue. How many blue marbles does Nosisi have?

Compare

Nosisi has 13 bananas. Themba has five bananas. How many more bananas does Nosisi have than Themba?

Posing each problem in different ways

Problems have to be posed in different ways. For example, both of these are change problems, but the “unknowns” are in different places in the problem.

Noluthando had some apples. Silo gave her eight more apples. Now she has 13 apples. How many apples did Noluthando have in the beginning?

Noluthando had five apples. Silo gave her some apples. She now has 13 apples. How many apples did Silo give her?

Problem situations with different functional relationships

Heila sells hotdogs at R4 each. Make a table to help her find the amount for large orders.

Number of hotdogs	1	2	3	4	5	6	7
Cost in R	4	8					

Use the table to find the cost of seven hotdogs

These problem types are given to guide the teacher. Learners should not be burdened with type names. Note that learners often use different ways of solving a problem that may not be what the teacher expects.

GRADE 1 OVERVIEW				
2. PATTERNS, FUNCTIONS AND ALGEBRA				
TOPICS	TERM 1	TERM 2	TERM 3	TERM 4
2.1 Geometric patterns	<p>Copy and extend Copy and extend simple patterns using</p> <ul style="list-style-type: none"> • physical objects; • drawings (e.g. using colours and shapes) 	<p>Copy, extend and describe Copy, extend and describe in words</p> <ul style="list-style-type: none"> • simple patterns made with physical objects • simple patterns made by drawings lines, shapes or objects <p>Create and describe own patterns</p> <ul style="list-style-type: none"> • Create own geometric patterns <ul style="list-style-type: none"> - with physical objects - by drawing lines, shapes or objects • Describe own patterns 	<p>Copy, extend and describe Copy, extend and describe in words</p> <ul style="list-style-type: none"> • simple patterns made with physical objects • simple patterns made by drawings lines, shapes or objects <p>Create and describe own patterns</p> <ul style="list-style-type: none"> • Create own geometric patterns <ul style="list-style-type: none"> - with physical objects - by drawing lines, shapes or objects • Describe own patterns 	<p>Patterns around us Identify, describe in words and copy geometric patterns</p> <ul style="list-style-type: none"> • in nature • from modern everyday life • from our cultural heritage <p>Create and describe own patterns</p> <ul style="list-style-type: none"> • Create own geometric patterns <ul style="list-style-type: none"> - with physical objects - by drawing lines, shapes or objects • Describe own patterns
	<p>Suggested sequencing of work Start copying and extending patterns using physical objects and once learners are comfortable with using a crayon or pencil, start copying and extending patterns by drawing them</p>			

TOPICS	TERM 1	TERM 2	TERM 3	TERM 4

<p>5.4 Collect and organise data</p> <p>5.5 Represent data</p> <p>5.6 Analyse and Interpret data</p>			<p>Recommended:</p> <p>Whole data cycle to make class pictograph</p> <ul style="list-style-type: none"> Collect and organise data <ul style="list-style-type: none"> about the class or school answers to questions posed by the teacher <ul style="list-style-type: none"> Represent data in pictograph. Answer questions about data in pictograph 	<p>Analyse data from representations provided. Recommended: At least two pictographs</p>

3.4.2. Grade 2 overview per term

GRADE 2 OVERVIEW				
1. NUMBERS, OPERATIONS AND RELATIONSHIPS				
TOPICS	TERM 1	TERM 2	TERM 3	TERM 4
NUMBER CONCEPT DEVELOPMENT: Count with whole numbers				
1.1 Count objects	<ul style="list-style-type: none"> Count to at least 100 everyday objects reliably Give a reasonable estimate of a number of objects that can be checked by counting Strategy of grouping is encouraged 	<ul style="list-style-type: none"> Count to at least 150 everyday objects reliably Give a reasonable estimate of a number of objects that can be checked by counting Strategy of grouping is encouraged 	<ul style="list-style-type: none"> Count to at least 180 everyday objects reliably Give a reasonable estimate of a number of objects that can be checked by counting Strategy of grouping is encouraged 	<ul style="list-style-type: none"> Count to at least 200 everyday objects reliably Give a reasonable estimate of a number of objects that can be checked by counting Strategy of grouping is encouraged
1.2 Count forwards and backwards	<p>Count forwards and backwards in:</p> <ul style="list-style-type: none"> 1s from any number between 0 and 100 10s from any multiple of 10 between 0 and 100 5s from any multiple of 5 between 0 and 100 2s from any multiple of 2 between 0 and 100 	<p>Count forwards and backwards in:</p> <ul style="list-style-type: none"> 1s from any number between 0 and 150 10s from any multiple of 10 between 0 and 150 5s from any multiple of 5 between 0 and 150 2s from any multiple of 2 between 0 and 150 3s from any multiple of 3 between 0 and 99 4s from any multiple 4 between 0 and 100 	<p>Count forwards and backwards in:</p> <ul style="list-style-type: none"> 1s from any number between 0 and 180 10s from any multiple of 10 between 0 and 180 5s from any multiple of 5 between 0 and 180 2s from any multiple of 2 between 0 and 180 3s from any multiple of 3 and between 0 and 180 4s from any multiple of 4 between 0 and 180 	<p>Count forwards and backwards in:</p> <ul style="list-style-type: none"> 1s, from any number between 0 and 200 10s from any multiple between 0 and 200 5s from any multiple of 5 between 0 and 200 2s from any multiple of 2 between 0 and 200 3s from any multiple of 3 between 0 and 200 4s from any multiple of 4 between 0 and 200

TOPICS	TERM 1	TERM 2	TERM 3	TERM 4
NUMBER CONCEPT DEVELOPMENT: Represent whole numbers				
1.3 Number symbols and number names	<p>Identify, recognise and read numbers</p> <ul style="list-style-type: none"> Identify, recognise and read number symbols 0 to 100 Write number symbols 0 to 100 Identify, recognise and read number names 0 to 25 Write number names 0 to 25 	<p>Identify, recognise and read numbers</p> <ul style="list-style-type: none"> Identify, recognise and read number symbols 0 to 150 Write number symbols 0 to 150 Identify, recognise and read number names 0 to 50 Write number names 0 to 50 	<p>Identify, recognise and read numbers</p> <ul style="list-style-type: none"> Identify, recognise and read number symbols 0 to 180 Write number symbols 0 to 180 Identify, recognise and read number names 0 to 75 Write number names 0 to 75 	<p>Identify, recognise and read numbers</p> <ul style="list-style-type: none"> Identify, recognise and read number symbols 0 to 200 Write number symbols 0 to 200 Identify, recognise and read number names 0 to 100 Write number names 0 to 100
NUMBER CONCEPT DEVELOPMENT: Describe, compare and order whole numbers				
1.4 Describe, compare and order numbers	<p>Describe, compare and order numbers to 25</p> <ul style="list-style-type: none"> Compare whole numbers using smaller than, greater than, more than, less than and is equal to Order whole numbers from smallest to greatest, and greatest to smallest 	<p>Describe, compare and order numbers to 50</p> <ul style="list-style-type: none"> Compare whole numbers using smaller than, greater than, more than, less than and is equal to Order whole numbers from smallest to greatest, and greatest to smallest 	<p>Describe, compare and order numbers to 75</p> <ul style="list-style-type: none"> Compare whole numbers using smaller than, greater than, more than, less than and is equal to Order whole numbers from smallest to greatest, and greatest to smallest 	<p>Describe, compare and order numbers to 99</p> <ul style="list-style-type: none"> Compare whole numbers up to 99 using smaller than, greater than, more than, less than and is equal to Order whole numbers from smallest to greatest, and greatest to smallest
NUMBER CONCEPT DEVELOPMENT: Place value				
1.5 Place value	<p>Recognise place value of numbers 11 to 25</p> <ul style="list-style-type: none"> Decompose two-digit numbers into multiples of tens and ones/ones Identify and state the value of each digit 	<p>Recognise place value of numbers 11 to 50</p> <ul style="list-style-type: none"> Decompose two-digit numbers into multiple of tens and ones/units Identify and state the value of each digit 	<p>Recognise place value of numbers 11 to 75</p> <ul style="list-style-type: none"> Decompose two-digit numbers into multiple of tens and ones/units Identify and state the value of each digit 	<p>Recognise place value of numbers 11 to 99</p> <ul style="list-style-type: none"> Decompose two-digit numbers into multiple of tens and ones/units Identify and state the value of each digit

TOPICS	TERM 1	TERM 2	TERM 3	TERM 4
SOLVE PROBLEMS IN CONTEXT				
1.6 Problem-solving techniques	Use the following techniques when solving problems and explain solutions to problems: <ul style="list-style-type: none"> • drawings or concrete apparatus e.g. counters • building up and breaking down of numbers • doubling and halving • number lines supported by concrete apparatus 	Use the following techniques when solving problem and explain solutions to problems: <ul style="list-style-type: none"> • drawings or concrete apparatus e.g. counters • building up and breaking down of numbers • doubling and halving • number lines 	Use the following techniques when solving problem and explain solutions to problems: <ul style="list-style-type: none"> • drawings or concrete apparatus e.g. counters • building up and breaking down of numbers • doubling and halving • number lines 	Use the following techniques when solving problem and explain solutions to problems: <ul style="list-style-type: none"> • drawings or concrete apparatus e.g. counters • building up and breaking down of numbers • doubling and halving • number lines
1.7 Addition and subtraction	Solve word problems in context and explain own solution to problems involving addition and subtraction with answers up to 20.	Solve word problems in context and explain own solution to problems involving addition and subtraction with answers up to 50.	Solve word problems in context and explain own solution to problems involving addition and subtraction with answers up to 75.	Solve word problems in context and explain own solution to problems involving addition and subtraction with answers up to 99.
1.8 Repeated addition leading to multiplication	Solve word problems in context and explain own solution to problems involving repeated addition leading to multiplication with answers up to 20.	Solve word problems in context and explain own solution to problems involving repeated addition and to multiplication with answers up to 30.	Solve word problems in context and explain own solution to problems involving repeated addition and to multiplication with answers up to 40.	Solve word problems in context and explains own solution to problems involving repeated addition and to multiplication with answers up to 50.
1.9 Grouping and sharing leading to division	Solve word problems in context and explain own solutions to problems that involve equal sharing and grouping up to 20 with answers that may include remainders.	Solve word problems in context and explain own solutions to problems that involve equal sharing and grouping up to 30 with answers that may include remainders.	Solve word problems in context and explain own solutions to problems that involve equal sharing and grouping up to 40 with answers that may include remainders.	Solve word problems in context and explain own solutions to problems that involve equal sharing and grouping up to 50 with answers that can include remainders.
1.10 Sharing leading to fractions	Solve word problems in context and explain own solutions to problems that involve equal sharing leading to solutions that include unitary fractions e.g. $\frac{1}{2}$, $\frac{1}{4}$, $\frac{1}{3}$, $\frac{1}{5}$ etc.	Solve word problems in context and explain own solutions to problems that involve equal sharing leading to solutions that include unitary fractions e.g. $\frac{1}{2}$, $\frac{1}{4}$, $\frac{1}{3}$, $\frac{1}{5}$ etc.	Solve word problems in context and explain own solutions to problems that involve equal sharing leading to solutions that include unitary fractions e.g. $\frac{1}{2}$, $\frac{1}{4}$, $\frac{1}{3}$, $\frac{1}{5}$ etc.	Solve word problems in context and explain own solutions to problems that involve equal sharing leading to solutions that include unitary fractions e.g. $\frac{1}{2}$, $\frac{1}{4}$, $\frac{1}{3}$, $\frac{1}{5}$ etc.
1.11 Money	<ul style="list-style-type: none"> • Recognise and identify the South African coins 5c, 10c, 20c, 50c, R1, R2, R5, and bank notes R10, R20, R50 • Solve money problems involving totals and change in cents up to 50c and rands to R20 	<ul style="list-style-type: none"> • Recognise and identify the South African coins 5c, 10c, 20c, 50c, R1, R2, R5, and bank notes R10, R20, R50 • Solve money problems involving totals and change in cents up to 50c and rands to R50 	<ul style="list-style-type: none"> • Recognise and identify the South African coins 5c, 10c, 20c, 50c, R1, R2, R5, and bank notes R10, R20, R50 • Solve money problems involving totals and change in cents up to 75c and rands to R75 	<ul style="list-style-type: none"> • Recognise and identify the South African coins 5c, 10c, 20c, 50c, R1, R2, R5, and bank notes R10, R20, R50 • Solve money problems involving totals and change in cents up to 90c and rands to R99

Problem Types for Grade 2

These are examples of important problem types that the teacher needs to present repeatedly to her class. When the teacher works with a small group, she should pose the problem orally. When the learners can read, she can give them a written version of the problem as well, but she must still pose the problem orally.

Problems in context can be included in worksheets, but should then be short, straightforward and familiar, and the teacher must make sure that all the learners understand them.

Grouping

Grouping, discarding the remainder

Stella sells apples in bags of 10 apples each. She has 80 apples. How many bags of 10 apples each can she make up?

Grouping, incorporating the remainder in the answer

A farmer has 47 eggs. How many egg boxes that can take six eggs each does he need to pack all the eggs?

Sharing

Sharing, discarding the remainder

Share 54 sweets among seven friends so that they all get the same number of sweets.

Sharing, leading to fractions

Share 11 chocolate bars among four friends so that they all get the same amount of chocolate bar and there is nothing left over.

Fraction of a collection

Grandmother gives Kiki 12 oranges. Kiki makes juice with $\frac{1}{3}$ of the oranges. How many oranges did she use?

This problem type must only be posed after learners have solved four or five problems of the sharing, leading to fractions type and know the names of fractional pieces.

Putting fractions together

The netball coach gives half an orange to each player. There are 14 players. How many oranges does she need?

This problem type must only be posed after learners have solved four or five problems of the sharing, leading to fractions type and know the names of fractional pieces.

Repeated addition

How many wheels do 20 bicycles have?

Rate

Thami walks six blocks a day. How many blocks does he walk in a week?

Grids

Mr Khumalo plants seven rows of cabbages. There are eight cabbages in a row. How many cabbages are there altogether?

Addition and subtraction

There are at least three basic types of addition and subtraction problems and each type can be posed in different ways. The basic types are:

Change

Noluthando had 25 sweets. Silo gave her 18 sweets. How many sweets does she have now?

Noluthando had 53 sweets. She gave 32 sweets to Silo. How many sweets does she have now?

Combine

The Grade 2 class has 37 green triangles and 19 blue triangles. How many triangles do they have?

They have 63 circles; 27 are green and the rest are blue. How many blue circles do they have?

Compare

Nosisi has 13 bananas. Themba has five bananas. How many more bananas does Nosisi have than Themba?

Posing each problem in different ways

Problems have to be posed in different ways. For example, both of these are change problems, but the “unknowns” are in different places in the problem.

Noluthando had some sweets. Silo gave her 18 more sweets. Now she has 43 sweets. How many sweets did Noluthando have in the beginning?

Noluthando had 25 apples. Silo gave her some apples. She now has 43 apples. How many apples did Silo give her?

Problem situations with different functional relationships

Heila sells hotdogs at R4 each. Make a table to help her find the amount for large orders.

Number of hotdogs	1	2	3	4	5	6	7	8	9	10
Cost in R	4	8								

Use the table to find the cost of seven hotdogs and 15 hotdogs.

Sedick babysits. He charges R20 for travel costs, and then R5 per hour for babysitting. Complete this table for him.

Number of hours	1	2	3	4	5	10
Cost in R	25	30				

Note that Heila’s problem and Sedick’s problem work differently.

The above problem types are given to guide the teacher. Learners should not be burdened with type names. Note that learners often use different ways of solving a problem that may not be what the teacher expects. For example, a division problem may be solved by repeated subtraction, addition or multiplication. Learners’ methods will change in the course of the year as their understanding of and familiarity with the problem types grow, and as their number concept develops.

GRADE 2 OVERVIEW
2. PATTERNS, FUNCTIONS AND ALGEBRA

TOPICS	TERM 1	TERM 2	TERM 3	TERM 4
2.1 Geometric patterns	<p>Copy, extend and describe Copy, extend and describe in words</p> <ul style="list-style-type: none"> • simple patterns made with physical objects • simple patterns made with drawings of lines, shapes or objects <p>Range of patterns: Simple patterns in which shapes, or groups of shapes are repeated in exactly the same way</p> <p>Create and describe own patterns</p> <ul style="list-style-type: none"> • Create own geometric patterns - with physical objects - by drawing lines, shapes or objects • Describe own patterns 	<p>Copy, extend and describe Copy, extend and describe in words</p> <ul style="list-style-type: none"> • simple patterns made with physical objects • simple patterns made with drawings of lines, shapes or objects <p>Range of patterns: Simple patterns in which shapes, or groups of shapes are repeated in exactly the same way</p> <p>Patterns in which the number or size of shapes in each stage changes in a predictable way i.e. regularly increasing patterns</p> <p>Create and describe own patterns</p> <ul style="list-style-type: none"> • Create own geometric patterns - with physical objects - by drawing lines, shapes or objects • Describe own patterns 	<p>Copy, extend and describe Copy, extend and describe in words</p> <ul style="list-style-type: none"> • simple patterns made with physical objects • simple patterns made with drawings of lines, shapes or objects <p>Range of patterns: Patterns in which the number or size of shapes in each stage changes in a predictable way i.e. regularly increasing patterns</p> <p>Create and describe own patterns</p> <ul style="list-style-type: none"> • Create own geometric patterns - with physical objects - by drawing lines, shapes or objects • Describe own patterns 	<p>Patterns around us Identify, describe in words and copy geometric patterns</p> <ul style="list-style-type: none"> • in nature • from modern everyday life • from our cultural heritage

TOPICS	TERM 1	TERM 2	TERM 3	TERM 4
<p>2.2 Number patterns</p>	<p>Copy, extend and describe Copy, extend and describe simple number sequences to at least 100. Sequences should show counting forwards and backwards in:</p> <ul style="list-style-type: none"> • 1s from any number between 0 and 100 • 10s from any multiple of 10 between 0 and 100 • 5s from any multiple of 5 between 0 and 100 • 2s from any multiple of 2 between 0 and 100 	<p>Copy, extend and describe Copy, extend and describe simple number sequences to at least 150. Sequences should show counting forwards and backwards in:</p> <ul style="list-style-type: none"> • 1s from any number between 0 and 150 • 10s from any multiple of 10 between 0 and 150 • 5s from any multiple of 5 between 0 and 150 • 2s from any multiple of 2 between 0 and 150 • 3s from any multiple of 3 between 0 and 150 • 4s from any multiple of 4 between 0 and 150 	<p>Copy, extend and describe Copy, extend and describe simple number sequences to at least 180. Sequences should show counting forwards and backwards in:</p> <ul style="list-style-type: none"> • 1s from any number between 0 and 180 • 10s from any multiple of 10 between 0 and 180 • 5s from any multiple of 5 between 0 and 180 • 2s from any multiple of 2 between 0 and 180 • 3s from any multiple of 3 between 0 and 180 • 4s from any multiple of 4 between 0 and 180 	<p>Copy, extend and describe Copy, extend and describe simple number sequences to at least 200. Problem Types for Grade 3

These are examples of important problem types that the teacher needs to present repeatedly to her class. When the teacher works with a small group, she should pose the problem orally. When the learners can read, she can give them a written version of the problem as well, but she must still pose the problem orally.

Problems in context can be included in worksheets, but should then be short, straightforward and familiar, and the teacher must make sure that all the learners understand them.

Grouping

Grouping, discarding the remainder

A bakery sells bread rolls in bags of 12. They have 118 rolls. How many bags of 12 rolls each can they make up?

Grouping, incorporating the remainder in the answer

A farmer has 227 eggs. How many egg boxes that can take six eggs each does he need to pack all the eggs?

Sharing

Sharing, discarding the remainder

Five friends share a box of 84 sweets so that they all get the same number of sweets.

Sharing, leading to fractions

Share 15 chocolate bars among six friends so that they all get the same amount of chocolate bar and there is nothing left over.

Fraction of a collection

Grandmother gives Kiki R12. Kiki wants to save a third of the money. How much money must she save?

This problem type must only be posed after learners have solved four or five problems of the Sharing, leading to fractions type and know the names of fractional pieces.

Putting fractions together

The netball coach gives half an orange to each player. There are 14 players. How many oranges does she need?

This problem type must only be posed after learners have solved four or five problems of the Sharing, leading to fractions type and know the names of fractional pieces.

Proportional sharing

Peter is smaller than Rhulani. When Peter eats one slice of bread, Rhulani needs two slices of bread. When Peter eats two slices, Rhulani needs four slices. After a few days, they have eaten 12 slices of bread. How many slices did Peter eat and how many slices did Rhulani eat?

Sue and Greg do a piece of work together. Sue works for three hours and Greg works for one hour. They are paid R60. How must they share the money?

Repeated addition

How many wheels do 36 cars have?

Rate

Thami saves 35c every week. How much money does he save in 8 weeks?

Grids

Mr Khumalo plants 20 rows of orange trees. There are 12 trees in a row. How many trees are there altogether?

Addition and subtraction

There are at least three basic types of addition and subtraction problems and each type can be posed in different ways. The basic types are:

Change

Noluthando collected 234 stickers. Silo gave her 80 more stickers. How many stickers does she have now?

There were 500 passengers on a train and 176 passengers got off. How many passengers were left on the train?

Combine

Nosisi collects items for the school's recycling projects. She collected 124 plastic bottles and 268 tin cans. How many items did she collect? The shop has 368 packets of chips; 82 are chippos and the rest are Ziksnacks. How many packets or Ziksnacks are there?

Compare

Grade 2 collected R446. Grade 3 collected R729. How much more money did the Grade 3s collect?

Posing each problem in different ways

Problems have to be posed in different ways. For example, both of these are change problems, but the "unknowns" are in different places in the problem.

The shop had packets of mealie meal and ordered 55 more. Now there are 170 packets of mealie meal. How many packets were there in the beginning?

The shop had 500 packets of sugar. After selling some packets, they had 324 packets of sugar left. How many packets did they sell?

Problem situations with different functional relationships

Heila sells hotdogs at R4 each. Make a table to help her find the amount for large orders.

Number of hotdogs	1	2	3	4	5	10	20
Cost in R	4	8					

Use the table to find the cost of seven hotdogs and 23 hotdogs.

Sedick babysits. He charges R20 for travel costs, and then R5 per hour for babysitting. Complete this table for him.

Number of hours	1	2	3	4	5	10
Cost in R	25	30				

Note that Heila’s problem and Sedick’s problem work differently.

The above problem types are given to guide the teacher. Learners should not be burdened with type names. Note that learners often use different ways of solving a problem that may not be what the teacher expects. For example, a division problem may be solved by repeated subtraction, addition or multiplication. Learners’ methods will change in the course of the year as their understanding of and familiarity with the problem types grow, and as their number concept develops.

GRADE 3 OVERVIEW					
2. PATTERNS, FUNCTIONS AND ALGEBRA					
TOPICS	TERM 1	TERM 2	TERM 3	TERM 4

TOPICS	TERM 1	TERM 2	TERM 3	TERM 4
<p>4.2 Length</p>		<p>Informal measuring</p> <ul style="list-style-type: none"> Estimate, measure, compare, order and record length using non-standard measures e.g. hand spans, paces, pencil lengths, counters, etc. Describe the length of objects by counting and stating the length in informal units Use language to talk about the comparison e.g. longer, shorter, taller, wider <p>Introducing formal measuring</p> <ul style="list-style-type: none"> Estimate, measure, order and record length using metres (either metre sticks or metre lengths of string) as the standard unit of length Estimate and measure lengths in centimetres using a ruler <p>(No conversions between metres and centimetres required)</p>	<p>Introducing formal measuring</p> <ul style="list-style-type: none"> Estimate, measure, compare, order and record length using metres (either metre sticks or metre lengths of string) as the standard unit of length Estimate, measure and record lengths in centimetres using a ruler 	

TOPICS	TERM 1	TERM 2	TERM 3	TERM 4
<p>4.3 Mass</p>		<p>Informal measuring</p> <ul style="list-style-type: none"> Estimate, measure, compare, order and record mass using a balancing scale and non-standard measures e.g. blocks, bricks, etc. Use language to talk about the comparison e.g. light, heavy, lighter, heavier <p>Introducing formal measuring</p> <ul style="list-style-type: none"> Compare, order and record the mass of commercially packaged objects which have their mass stated in kilograms e.g. 2 kilograms of rice and 1 kilogram of flour or in grams, e.g. 500 grams of salt Where bathroom scales are available, learners can measure their own mass in kilograms using a bathroom scale. The expectation is that learners only read to the nearest numbered gradation line. They describe their mass as almost/nearly/close to/a bit more than/more or less/or exactly the number (of kilograms) they read off the scale Where balancing scales with mass pieces calibrated in grams are available, learners can measure mass or different objects <p>(No conversions between grams and kilograms required)</p>		<p>Introducing formal measuring</p> <p>Learners do written tasks to consolidate the following, including reading pictures of</p> <ul style="list-style-type: none"> products with mass written on them bathroom scales where the needle points to numbered gradation lines

TOPICS	TERM 1	TERM 2	TERM 3	TERM 4
<p>4.4 Capacity/Volume</p>	<p>Informal measuring</p> <ul style="list-style-type: none"> Estimate, measure, compare and order the capacity of containers (i.e. the amount the container can hold if filled) by using non-standard measures e.g. spoons and cups Describe the capacity of the container by counting and stating how many of the informal units it takes to fill the container e.g. the bottle has the capacity of four cups <p>Introducing formal measuring</p> <ul style="list-style-type: none"> Estimate, measure, compare, order and record the capacity of objects by measuring in litres, half litres and quarter litres <ul style="list-style-type: none"> using bottles with a capacity of 1 litre, or containers whose capacity is stated in millilitres e.g. cool drink cans measuring jugs in which numbered calibration lines show litres, half litres and quarter litres measuring jugs which have numbered calibration lines for millilitres measuring cups and teaspoons which indicate their capacity Compare, order and record the capacity of commercially packaged objects whose capacity is stated in litres e.g. 2 litres of milk, 1 litre of cool drink, 5 litres of paint, or in millilitres e.g. 500 ml of milk, 340 millilitres of cool drink, 750 millilitres of oil Know that a standard cup is 250 millilitres Know that a teaspoon is 5 millilitres (No conversions between millilitres and litres required) 			<p>Introducing formal measuring</p> <p>Written tasks to consolidate the following, including reading pictures of</p> <ul style="list-style-type: none"> products with their capacity written on them in order to sequence in order jugs where the volume is near to a numbered 1 litre or 2 litre gradation line or half litre or quarter litre jugs where the volume is near to a numbered millilitres gradation line. The expectation is that learners only read to the nearest numbered gradation line. They describe their volume as almost/nearly/ close to/ a bit more than/ more or less/ or exactly the number (of litres) they read off the jug <p>(No conversions between millilitres and litres required)</p>

TOPICS	TERM 1	TERM 2	TERM 3	TERM 4
4.5 Perimeter			Perimeter Investigate the distance around 2-D shapes and 3-D objects using direct comparison or informal units.	
4.6 Area				Area Investigate the area using tiling.

GRADE 3 OVERVIEW
5. DATA HANDLING

TOPICS	TERM 1	TERM 2	TERM 3	TERM 4
5.4 Collect and organise data	<p>Recommended: Whole data cycle to make bar graph. Collect data about the class or school to answer questions posed by the teacher.</p> <p>Use tallies to record data in categories provided.</p> <p>Represent data in</p> <ul style="list-style-type: none"> • Tables • Bar graphs <p>Talk about and answer questions about data in tables and bar graphs.</p>	<p>Analyse data from representations provided.</p> <p>Recommended</p> <ul style="list-style-type: none"> • At least one pictograph with one-to-one correspondence • At least one bar graph 	<p>Recommended: Re-organise data provided in a list or tally or table in a bar graph. Represent data on bar graph. Answer questions about data on bar graph</p>	<p>Analyse data from representations provided.</p> <p>Recommended</p> <ul style="list-style-type: none"> • At least one pictograph with one-to-one correspondence • At least one bar graph
5.6 Analyse and Interpret data				

3.5 Clarification notes with teaching guidelines

The tables below provide the teacher with:

- content areas and topics per grade per term;
- concepts and skills suggested focus per term;
- clarification notes with teaching guidelines; and
- the duration of time allocated per topic in lessons given in 1 hour and 24 minutes.

3.5.1 Clarification of Grade 1 content

GRADE 1 TERM 1
1. NUMBERS, OPERATIONS AND RELATIONSHIPS

During the first term time is spent on developing pre-number concepts. Early skills developed in respect of patterns, shape and space, measurement and data form the basis of schooling skills in general and number skills in particular.

Matching

Matching leads to understanding the concept of one-to-one correspondence, which in turn is the basis of comparing the number of objects in a group.

When a learner is able to identify “the same”, it becomes possible to match two sets. Sameness is a prerequisite for conservation. Conservation is an important skill in measurement, number and space and shape.

Sorting

When sorting, learners look for similarities and differences. Learners also develop the ability to describe and identify. Describing means that learners can recognise and name things around them. Identifying means that learners can pick out an object when given a description. Learners identify according to certain attributes. Learners sort objects according to size, colour, shape, length, mass, capacity and volume. Sorting is done with

- everyday objects in data handling;
- geometric shapes and objects in shape and space; and
- the attributes of objects in measurement.

Comparing

When learners compare objects they focus on the difference between objects. Learners can focus on

- big or small;
- heavy or light;
- tall or short;
- hot or cold;
- empty or full;
- many or few; and
- first, last or middle.

Learning to compare is a focus area of

- early measurement activities;
- initial activities in shape and space (including work on position); and
- early activities in patterning.

In number activities, learners match objects in different groups. They learn to identify groups with the same number of objects in them, and to distinguish groups that may have more or fewer objects than other groups.

Ordering

Ordering is fundamental to the number system. Placing and counting objects in order help young learners to make sure that they only count each object once. Placing objects in order when counting lays the basis for understanding how to order numbers.

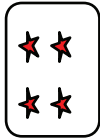

Early work with patterns involving shapes or objects helps to focus learners’ attention on ordering. Later learners use this skill when working with number patterns.

Subitising

Subitising is the instant recognition of the number of objects in a collection without counting them.

Subitising helps learners to see small collections as one unit. This provides learners with an early perceptual basis for working with numbers.

TOPICS	CONCEPTS AND SKILLS REQUIREMENT BY YEAR END	CONCEPTS AND SKILLS FOCUS FOR TERM 1	SOME CLARIFICATION NOTES OR TEACHING GUIDELINES	DURATION (in lessons of 1 hour 24 minutes)
<p>1.1 Count objects</p>	<p>Count out objects reliably to 50. Give a reasonable estimate of a number of objects that can be checked by counting.</p>	<p>Count out objects reliably to 10. Give a reasonable estimate of a number of objects that can be checked by counting.</p>	<p>Counting helps learners to develop an awareness of the size of numbers and lays the basis for calculating with whole numbers. During the first term learners develop the following skills:</p> <ul style="list-style-type: none"> • Counting all • Counting on • The cardinality principle • Working with written texts <p>Counting in Term 1 is focussed on developing learner's counting skills. The development of counting skills allows them to:</p> <ul style="list-style-type: none"> • count grouped and ungrouped objects; • count forward and backwards; • count actions; • count in sequence on a number line; • develop an awareness of the size of numbers by ordering and comparing them; and • estimate and predict. <p>Counting objects</p> <p>Before learners count objects they need opportunities to practise counting orally. Learners need to have an oral list of number names in order: one, two, and three until 20. Encourage learners to say number rhymes and play games that reinforce the oral counting. This ability to count orally or rote count is important to develop the knowledge of number names and also a sense of the rhythm/pattern within numbers.</p> <p>Learners then count each object and match number names to sets of objects. This involves touching and moving the object and saying the number name.</p> <p>It is important that learners understand that the last number named represents the last object counted in the group. They must know and understand that the last number named indicates the amount in the set or the cardinality of the set. Not all learners who can count orally and say the number names in sequence will attach meaning to their counts. They might skip numbers and say that there are four counters when there are actually five counters.</p>	

TOPICS	CONCEPTS AND SKILLS REQUIREMENT BY YEAR END	CONCEPTS AND SKILLS FOCUS FOR TERM 1	SOME CLARIFICATION NOTES OR TEACHING GUIDELINES	DURATION (in lessons of 1 hour 24 minutes)
<p>1.1 Count objects</p>	<p>Count out objects reliably to 50. Give a reasonable estimate of a number of objects that can be checked by counting.</p>	<p>Count out objects reliably to 10. Give a reasonable estimate of a number of objects that can be checked by counting.</p>	<p>It is important that learners count the same number of different objects.</p> <p>Example:</p> <ul style="list-style-type: none"> Count six counters Bring me six pencils Count six buttons <p>Conservation</p> <p>Learners will begin to realise when counting the number of objects, that the number is not affected by their size or position. One could ask: how many stars on each card?</p> <div style="display: flex; justify-content: space-around; align-items: center;"> <div style="border: 1px solid black; padding: 5px; display: inline-block;">  </div> <div style="border: 1px solid black; padding: 5px; display: inline-block;">  </div> </div> <p>The position or arrangement of the stars is different but the number of stars on each card is exactly the same.</p> <p>It is important that when counting concrete objects, learners recognise a small number of objects without counting.</p> <p>Example, recognising</p> <ul style="list-style-type: none"> five, as the number of fingers on one hand three counters, arranged in any way one to six, from the arrangement of dots on a die <p>This is also known as subitising.</p> <p>Therefore:</p> <p>Fundamental number concepts are developed by counting real objects. Learners learn:</p> <ul style="list-style-type: none"> to associate number words with a collection of objects; to build a mental picture of what a number means i.e. how big it is; and that the number name of the last object counted represents the total number of objects in the group. 	

TOPICS	CONCEPTS AND SKILLS REQUIREMENT BY YEAR END	CONCEPTS AND SKILLS FOCUS FOR TERM 1	SOME CLARIFICATION NOTES OR TEACHING GUIDELINES	DURATION (in lessons of 1 hour 24 minutes)
<p>1.1 Count objects</p>	<p>Count out objects reliably to 50. Give a reasonable estimate of a number of objects that can be checked by counting.</p>	<p>Count out objects reliably to 10. Give a reasonable estimate of a number of objects that can be checked by counting.</p>	<p>Instructions and questions to support the counting of objects</p> <ul style="list-style-type: none"> • Count 10 counting sticks. Arrange them in a line. • Rearrange the sticks and count again. Is the number still the same? • Count these bottle tops without touching them. • Is there the same number of each? • How many crayons do you think there are? • Are there more or fewer than you thought? • How do you know that you have that number? • How do you know that you counted every crayon? • How could you check your answer? <p>Moving to written texts</p> <p>Learners need to be given opportunities to count illustrations of objects. Example: How many?</p> <div data-bbox="789 752 943 962" style="text-align: center;"> </div> <p>Counting on</p> <p>Once learners can confidently count all the objects starting from one, they should count on from a collection they already have. Example: Ask learners to count out seven objects and then, starting from the seven objects, count out three more until they have 10 objects.</p> <p>Counting-on is a far more efficient counting strategy than counting all and learners will use counting on when they calculate.</p> <p>Resources: It is useful to build up a collection of different kinds of objects that learners can use as counters.</p> <p>Example:</p> <ul style="list-style-type: none"> • Matchsticks • Ice cream sticks • Peach pips • Beans • Bottle tops 	

TOPICS	CONCEPTS AND SKILLS REQUIREMENT BY YEAR END	CONCEPTS AND SKILLS FOCUS FOR TERM 1	SOME CLARIFICATION NOTES OR TEACHING GUIDELINES	DURATION (in lessons of 1 hour 24 minutes)
<p>1.2 Count forwards and backwards</p>	<p>Count forwards and backwards in ones from any number between 0 and 100</p> <p>Count forwards in</p> <ul style="list-style-type: none"> • 10s from any multiple of 10 between 0 and 100 • 5s from any multiple of 5 between 0 and 100 • 2s from any multiple of 2 between 0 and 100 	<p>Count forwards and backwards in Ones from any number between 1 and 20</p>	<p>Counting forwards in ones</p> <p>Counting orally or doing verbal counting (rote counting) is an important step in reciting the number names in order. If learners are able to do this, it does not mean that they have an understanding of the size of the numbers they are saying. There is no relationship between the number and the quantity or size of the numbers.</p> <p>In Term 1 it is expected that learners only count forwards and backwards in ones till 20.</p> <p>Counting forwards and backwards can be done with the whole class. Make sure that learners are not just chanting meaninglessly. In the focus groups and the independent work the following activities can be done to add meaning to the counting:</p> <ul style="list-style-type: none"> • Start at two and count to eight • Count from four to 10 • Count from two to eight. How many numbers did you count? <p>Counting to ten</p> <p>Initially learners will start counting to ten and practising the number names in sequence. Learners can get bored with verbal counting and they need to do it in different ways, otherwise they are simply chanting. Rote counting needs to be supported by reading number symbols and counting objects.</p> <p>Learners need to be presented with visual images of numbers in sequence. The following visual images can be used:</p> <ul style="list-style-type: none"> • Counting beads • An abacus • A number line <p>Initially a number line with all the numbers represented, and then a number line with some numbers not represented, can be used. This means that learners will have to know the numbers in sequence to fill in the gaps.</p> <p>Counting backwards</p> <p>Counting backwards is a difficult skill for learners and frequent practice is necessary. Start counting backwards from a number when learners are familiar with, 2, and build this up as you focus on each higher number.</p> <p>Counting to 20</p> <p>Counting beyond ten might require the learners to say the counting sequence after the teacher. It is also important to encourage learners to start counting at any number. Starting at 8 is far more demanding than starting at 1. Learners will use this skill when they count on in addition.</p>

<p>1.3 Number symbols and number names</p>	<p>Identify, recognise and read numbers</p> <ul style="list-style-type: none"> Identify, recognise and read number symbols 1 to 100 Write number symbols 1 to 20 Identify, recognise and read number names 1 to 10 Write number names 1 to 10 	<p>Identify, recognise and read numbers</p> <ul style="list-style-type: none"> Identify, recognise and read number symbols 1 to 20 Write number symbols 1 to 5 Identify, recognise and read number names 1 to 5 Write number names 1 to 5 	<p>Reading and writing number symbols and names Learners need to learn how to:</p> <ul style="list-style-type: none"> Write number symbols and names Read number symbols Say the numbers <p>The reading and writing of number symbols and names should be linked with counting activities. Learners should be given opportunities to match the number symbols and number names to collections of objects that they count out. In this way learners link the number symbol, the number name, the representation of the number and the meaning of the number.</p> <p>Further activities</p> <p>Practising writing</p> <p>Learners can practise the writing of number symbols in different ways:</p> <ul style="list-style-type: none"> By tracing over numerals Doing 'joining the dots' activities with outlines of number symbols By writing in sand By writing on chalk boards or on cement By painting Sewing numbers using wool. This activity is particularly useful in emphasising the starting point when writing numbers. By tracing large numerals cut out of sandpaper or fabri <p>Reading numbers</p> <p>This can be done by:</p> <ul style="list-style-type: none"> Pointing to numbers on the number line or on a number grid Reading number cards <p>Matching number symbols to a collection of objects</p> <p>This can be done by:</p> <ul style="list-style-type: none"> Matching the number of objects with numerals Counting out a group of objects and selecting the appropriate number card for the number of objects Counting objects in pictures and writing the number symbol. 	

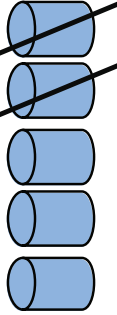

TOPICS	CONCEPTS AND SKILLS REQUIREMENT BY YEAR END	CONCEPTS AND SKILLS FOCUS FOR TERM 1	SOME CLARIFICATION NOTES OR TEACHING GUIDELINES	DURATION (in lessons of 1 hour 24 minutes)
<p>1.4 Describe, compare and order numbers</p>	<p>Describe, compare and order up to 20 objects</p> <ul style="list-style-type: none"> Describe and compare collection of objects according to most, least, the same as Describe and order collection of objects from most to least and least to most. Describe, compare and order numbers to 20. Describe and compare whole numbers according to smaller than, greater than and more than, less than, is equal to Describe and order numbers from smallest to greatest and greatest to smallest 	<p>Describe, compare and order objects up to 5.</p> <ul style="list-style-type: none"> Describe and compare collection of objects according to many, few; most, least; more than, less than; the same as, just as many as, different Describe and order collection of objects from most to least and least to most Range up to five objects Describe, compare and order numbers to 5. Describe and compare whole numbers to 5 using language e.g. according to, smaller than, greater than, more than, less than Describe and order: <ul style="list-style-type: none"> numbers from smallest to greatest and greatest to smallest using language e.g. before, after, in the middle/ between 	<p>Comparing and ordering of numbers help learners to refine their sense of the relative size of numbers. It will help them develop an idea of how much greater or smaller a number is than other numbers. If learners have a good sense of the relative size of numbers, they will find basic operations much easier. In the Foundation Phase this is called numerosity. Counting skills are important for comparing and ordering numbers. The ordering of numbers includes:</p> <ul style="list-style-type: none"> Learning about cardinal numbers which tell the value of a number Using, reading and writing number names and symbols the language to compare numbers <p>Comparing number of objects</p> <p>This is often done by using one-to-one correspondence. Learners count a collection of objects and match number names one-to-one with objects. Comparing a collection of objects depends on learners' counting experience.</p> <p>It is important to focus on the concepts of 'more and less' when comparing amounts. When comparing objects the language of comparing is developed.</p> <p>Example: As many as, the same number as, equal to, more than, less than, fewer than</p> <p>Ordering groups of objects</p> <p>From counting and comparing two sets of objects, learners discover and learn two important relationships:</p> <ul style="list-style-type: none"> Two collections are equal when they share the same number name although the collections might be arranged differently. Counting numbers represents a sequence of consecutive numbers that increases by one every time, e.g. five comes after four, hence a collection of five objects is one more than a collection of four objects or a collection of four objects is one less than a collection of five objects <p>Ordering and comparing numbers</p> <p>When learners order numbers, they might use the distance between numbers to know which number is bigger. For example, they will say that 5 is bigger than 2 because 5 comes after 2. Learners need to link the counting of objects and compare a group of nine objects to a group of two objects. By Grade 2 and 3 learners will be ordering and comparing numbers by explaining the value of the digits. Learners need to order numbers using a variety of images.</p> <p>Learners could also order numbers using the number line.</p>

<p>1.4 Describe, compare and order numbers</p>	<ul style="list-style-type: none"> Describe, compare and order up to 20 objects Describe and compare collection of objects according to most, least, the same as Describe and order collection of objects from most to least and least to most. Describe, compare and order numbers to 20. Describe and compare whole numbers according to smaller than, greater than and more than, less than, is equal to Describe and order numbers from smallest to greatest and greatest to smallest 	<p>Describe, compare and order objects up to 5.</p> <ul style="list-style-type: none"> Describe and compare collection of objects according to many, few; most, least; more than, less than; the same as, just as many as, different Describe and order collection of objects from most to least and least to most Range up to five objects Describe, compare and order numbers to 5. Describe and compare whole numbers to 5 using language e.g. according to, smaller than, greater than, more than, less than Describe and order: <ul style="list-style-type: none"> numbers from smallest to greatest and greatest to smallest using language e.g. before, after, in the middle/ between 	<p>Example:</p> <ul style="list-style-type: none"> Take the number 3 and place it on the number line Choose the number after 4 and place it in its correct position on the number line Choose the number between 3 and 5 and place it in its correct position on the number line Choose the number before 2 and place it in its correct position on the number line Choose the number before 3 and place it in its correct position on the number line <p>Number cards</p> <p>Example: Learners could pack out cards in sequence.</p> <div style="display: flex; justify-content: center; gap: 10px;"> <div style="border: 1px solid black; width: 30px; height: 30px; display: flex; align-items: center; justify-content: center; background-color: #e67e22; color: white; font-weight: bold;">1</div> <div style="border: 1px solid black; width: 30px; height: 30px; display: flex; align-items: center; justify-content: center; background-color: #e67e22; color: white; font-weight: bold;">2</div> <div style="border: 1px solid black; width: 30px; height: 30px; display: flex; align-items: center; justify-content: center; background-color: #e67e22; color: white; font-weight: bold;">3</div> <div style="border: 1px solid black; width: 30px; height: 30px; display: flex; align-items: center; justify-content: center; background-color: #e67e22; color: white; font-weight: bold;">4</div> <div style="border: 1px solid black; width: 30px; height: 30px; display: flex; align-items: center; justify-content: center; background-color: #e67e22; color: white; font-weight: bold;">5</div> </div> <p>Moving to written texts</p> <p>Learners can consolidate their knowledge by completing activities in workbooks. This can be done during independent time.</p> <p>Cardinality and ordinality</p> <p>Cardinality refers to the total number in a set or collection. Ordinality refers to the position of an object within a set of things. The links between cardinal and ordinal numbers need to be made. Learners will realise this when they count a group of objects and know that when they have touched the fifth object they have counted five things so far. Ordinal numbers are only dealt with in Term 4.</p>

<p>1.7 Addition and subtraction</p>	<p>Solve word problems in context and explain own solution to problems involving addition, subtraction with answers up to 20.</p>	<p>Practically solve word problems in context and explain own solution to problems involving addition, subtraction with answers up to five.</p>	<p>Word sums are often used as the entry into operations. Learners start off with solving the problem by using concrete apparatus; which then develops into:</p> <ul style="list-style-type: none"> • drawing pictures; • drawing pictures and writing numbers to describe the operation; and • only using numbers. <p>Example: There are five children on the see-saw. Three of them are on one side. How many are on the other side? During the first term learners can record this word problem in the following way.</p> <p>Calculating strategies Using counting all to solve the see-saw problem</p>  <p>Here learners count each group and the whole collection, so they are counting at least three times. Using counting on to solve the see-saw problem Learners count on from three until they get to five. This is a far more efficient strategy to use. "I know that there are three children and then one child makes four, and another one child makes five children. There are two children on the other side". <i>Doing addition and subtraction using apparatus</i> Learners use concrete apparatus in particular ways to arrive at an answer. Learners use the apparatus to construct a meaning of addition and subtraction using objects that they can touch, hold and move around. How learners use the apparatus is often determined by the structure of the word sum.</p>

<p>1.9 Grouping and sharing leading to division</p>	<p>Solve and explain solutions to practical problems involving equal sharing and grouping with whole numbers up to 20 and with answers that may include remainders.</p>	<p>Solve and explain solutions to practical problems involving equal sharing and grouping with whole numbers up to 5 and with answers that can include remainders.</p>	<p>In Grade 1 the concept of division is introduced through presenting learners with practical problems that involve sharing and grouping. It is only in Grade 3 that the division sign is introduced.</p> <p>Below are examples of types of word problems that can be done.</p> <p>Grouping <i>Grouping, discarding the remainder</i></p> <p>Stella sells squash in bags of two squash each. She has five squash left. How many bags of two squash each can she make up?</p> <p><i>Grouping, incorporating the remainder in the answer</i></p> <p>There are four apples. How many bags of two apples can be filled?</p> <p>Sharing <i>Sharing, discarding the remainder</i></p> <p>Share five sweets among three friends so that they all get the same number of sweets.</p> <p>Recording image for grouping and sharing</p> <p>When illustrating sharing word problems, learners will “share out” one item or object at a time.</p> <p>Grade 1 learners are likely to share out one item at a time and this will be reflected in their recordings.</p>  <p>As the year progresses learners will be able to record using pictures and numbers to show the number shared.</p>	

TOPICS	CONCEPTS AND SKILLS REQUIREMENT BY YEAR END	CONCEPTS AND SKILLS FOCUS FOR TERM 1	SOME CLARIFICATION NOTES OR TEACHING GUIDELINES	DURATION (in lessons of 1 hour 24 minutes)
<p>CONTEXT-FREE CALCULATIONS</p> <p>There are many ways of thinking about organising the teaching and learning of calculations. One way is to think about number ranges. The number range within which learners work will determine the kind of apparatus they use and how they record their solutions.</p> <p>So one way of thinking about the calculations in the Foundation Phase is the representation of calculations. This is done by:</p> <ul style="list-style-type: none"> • using concrete apparatus; • drawing pictures; • using pictures and symbols; • using numbers and arrows; or • using number sentences. <p>Learners move from using concrete apparatus to working abstractly with number symbols and number sentences. Calculations fall within the context of problem-solving situations. Learners develop problem-solving skills in order to operate with numbers. Learners need to do context-free calculations.</p>

<p>1.12 Techniques (methods or strategies)</p>	<p>Use the following techniques when performing calculations:</p> <ul style="list-style-type: none"> • concrete apparatus e.g. counters • draw pictures • building up and breaking down numbers • doubling and halving • number lines 	<p>Use the following techniques when solving problems and explain solutions to problems:</p> <ul style="list-style-type: none"> • concrete apparatus e.g. counters • pictures to draw the story sum • number lines supported by concrete apparatus e.g. counting beads 	<p>In the first term learners will solve number problems using concrete apparatus. It is important that learners use a variety of apparatus that has been selected carefully to support the development of the concept being taught.</p> <p>As learners grow confident in using the apparatus, to show their thinking they can record their calculations by drawing. Expect that their drawings will reflect the concrete apparatus. There might be some learners who will immediately represent their calculations by drawing and not using any concrete apparatus.</p> <p>Number lines supported by concrete apparatus</p> <p>When using number lines as a technique in order to calculate learners first need to have used:</p> <ul style="list-style-type: none"> • other 'line apparatus' e.g. counting beads, number tracks; • the number line to count forwards and backwards; and • the number line in order to position and order numbers. <p>A structured number line must be used (and is best suited for) when learners are doing addition and subtraction. The structured number line must show all the numbers on it.</p> <ul style="list-style-type: none"> • Introduce addition using a number line <p>a) Teacher puts a number line from 0 to 10 on the board. She shows learners how to solve the problem $3 + 2$ using a number line. She puts a picture of a rabbit at.</p> <p>Example: Rabbit jumps from 0 to 5 and then jumps another two jumps. How many jumps did it give altogether?</p>  <p>b) Learners use their fingers to jump on their own desk number lines, as the teacher gives number sentences with answers up to 10.</p> <p>Example: $1 + 2 = 3$.</p>

<p>3.2. 3-D objects</p>	<p>Range of objects Recognise and name 3-D objects in the classroom and in pictures</p> <ul style="list-style-type: none"> • ball shapes (spheres) • box shapes (prisms) <p>Features of objects Describe, sort and compare 3-D objects in terms of:</p> <ul style="list-style-type: none"> • size • colour • objects that roll • objects that slide <p>Focused activities Observe and build given 3-D objects using concrete materials such as building blocks, recycling material, construction kits.</p>	<p>Range of Objects Recognise and name 3-D objects in the classroom and in pictures</p> <ul style="list-style-type: none"> • ball shapes (spheres) • box shapes (prisms) <p>Features of objects Describe, sort and compare 3-D objects in terms of:</p> <ul style="list-style-type: none"> • size • colour <p>Focused activities Observe and build given 3-D objects using concrete materials such as building blocks, recycling, construction kits.</p>	<p>Most of the work on three dimensional objects in grade 1 should be done with concrete/ physical objects. We experience the world in three dimensions, so starting with physical objects helps learners to build on the experience that they bring to school.</p> <p>Many young learners struggle to interpret three dimensional geometric objects from pictures. Working with the physical objects helps learners to interpret pictures of the geometric objects later. When you have a physical object you can turn it around and look at it from all sides. You can see what it looks like from behind and underneath.</p> <p>When you only have a picture, you have to imagine the parts that are not visible in the drawing. This is not always easy for young learners. If learners are only given a definition of an object without seeing it or holding it, it is very difficult to understand the features of the object completely.</p> <p>Building with 3-D objects Learners start with free play with various 3-D objects and building things of their own choice using building blocks or construction kits or recycling. This can be done in independent time.</p> <p>You can then use recycling (such as match boxes) or building blocks or other construction kits to make a model or construction e.g. a tower, a robot, train, taxi, castle etc. Learners can make a copy of the model. This can be done in independent time, but it is important to also discuss with learners why certain kinds of objects are used in the models. This helps to focus learners on the geometric features of the objects. For example, if a tower is built of boxes or blocks, you can ask learners “can you build a tower with only balls?” They should explain their answer.</p> <p>Recognising and Naming balls (spheres) and boxes (prisms) Learners identify and describe ball shapes (spheres) and box shapes (prisms)</p> <p>Learners should describe everyday objects by saying whether they are shaped like a ball or are shaped like a box, e.g. this brick is shaped like a box or this orange is shaped like a ball.</p> <p>It is important for learners to see and work with more than one example of objects shaped like balls and objects shaped like boxes.</p> <p>Learners should be given a range of spherical objects to work with e.g. balls of different sizes, marbles, oranges etc. Learners should also be given a range of objects shaped like prisms to work with e.g. blocks, bricks, and boxes of different sizes.</p> <p>Learners can find and sort objects shaped like a ball (sphere), or shaped like a box (prisms) when given a collection of objects. Learners can find, show and name objects shaped like boxes (prisms) in the classroom. Learners can be instructed to make ball shapes or box shapes from clay or play dough.</p>	<p>3 lessons</p>

<p>4.3 Mass</p>	<p>Informal measuring</p> <ul style="list-style-type: none"> Estimate, measure, compare, order and record mass using non-standard measures and a balance e.g. blocks, bricks etc. Use language to talk about the comparison e.g. light, heavy, lighter, heavier Describe the mass of objects by counting and stating the mass in informal units 	<p>Informal measuring</p> <ul style="list-style-type: none"> Estimate, measure, compare, order and record mass using a balance and non-standard measures and e.g. blocks, bricks etc Use language to talk about the comparison e.g. light, heavy, lighter, heavier 	<p>All measurement in Grade 1 is informal. No formal measurement of mass with standard units or instruments is done.</p> <p>It is recommended that Mathematics lessons focus on mass in at least two terms of the year (Term 1 and Term 4). The focus in Term 1 can be on direct comparisons and in Term 4 learners can work with informal units of measurement. Learners can also practise and consolidate these concepts during independent work time throughout the year.</p> <p>Direct comparisons of the mass of physical objects</p> <ul style="list-style-type: none"> Developing an understanding of mass and the language to talk about it <p>Learners begin to think and talk about mass by comparing heavy and light objects. They pick up a very light object and then try to pick up a very heavy object. This can be consolidated by showing drawings in which very heavy and very light objects are compared.</p> <p>Once learners can talk about mass in terms of opposites, heavy and light, learners can compare two objects and say which is heavier and which is lighter. This can be done holding an object in each hand and comparing which is heavier and which lighter.</p> <p>Learners should record all work either through drawing or matching exercises.</p> <ul style="list-style-type: none"> Comparing mass using a balancing scale <p>Commercial mass balances can be used. If you don't have a commercial balance, you can make one by attaching a pair of one of the following to a coat hanger: a yoghurt cup, the cut-off base of a 2 litre bottle or the cut-off bottom of a 1 litre milk or cold drink box (identical containers are attached to either side of the coat hanger).</p>	<p>2 lessons</p>

TOPICS	CONCEPTS AND SKILLS: REQUIREMENT BY YEAR END	CONCEPTS AND SKILLS: FOCUS FOR TERM 1	SOME CLARIFICATION NOTES OR TEACHING GUIDELINES	DURATION (in lessons of 1 hour 24 minutes)
<p>4.3 Mass</p>	<p>Informal measuring</p> <ul style="list-style-type: none"> Estimate, measure, compare, order and record mass using non-standard measures and a balance e.g. blocks, bricks etc. Use language to talk about the comparison e.g. light, heavy, lighter, heavier Describe the mass of objects by counting and stating the mass in informal units 	<p>Informal measuring</p> <ul style="list-style-type: none"> Estimate, measure, compare, order and record mass using a balance and non-standard measures and e.g. blocks, bricks etc Use language to talk about the comparison e.g. light, heavy, lighter, heavier 	<ul style="list-style-type: none"> Learners can start by placing identical objects on either side of the balance, to see that the “bar” or base of the coat hanger it is horizontal when the two objects have the same mass. Learners compare objects by placing one in each side of the balance, to see which is heavier or lighter. Learners can then compare objects by placing more than one object on one or both sides of the balance to see how many of one object have the same mass as another e.g. 5 crayons has the same mass as 1 pair of scissors. This can be extended to seriation, where learners test the relative mass of pairs of objects until they can sequence three or more objects from lightest to heaviest or heaviest to lightest. <p>Items should be selected to include large light items and small heavy items, e.g. a 250 g packet of salt compared with a 400 g box of cornflakes. This helps learners to understand from the onset that mass is only related to size if the same substance is weighed.</p> <p>Learners develop a sense of mass at the same time as they develop the language to describe mass.</p> <p>Since this does not require any numbers, it can be done early in Term 1 before learners consolidate their number and operation sense to 5.</p> <p>Recording</p> <p>Although measuring is a practical skill, learners should also do written exercises, which can include drawing and colouring, both so that they practise using crayons or pencils and so that they practise recording when measuring.</p>	<p>2 lessons</p>

<p>4.4 Capacity/Volume</p>	<p>Informal measuring</p> <ul style="list-style-type: none"> Compare and order the amount of liquid (volume) in two containers placed next to each other. Learners check by pouring into a third container if necessary Compare and order the amount of liquid that two containers can hold if filled (capacity) Use language to talk about the comparison e.g. more than, less than, full, empty Estimate, measure, compare, order and record the capacity of containers by using non-standard measures e.g. spoons and cups Describe the capacity of the container by counting and stating how many of the informal units it takes to fill the container e.g. the bottle has the capacity of four cups 	<p>Informal measuring</p> <ul style="list-style-type: none"> Compare and order the amount of liquid (volume) in two containers placed next to each other. Learners check by pouring into a third container if necessary Use language to talk about the comparison e.g. more than, less than, full, empty 	<p>What is capacity? What is volume? Capacity is the amount that an object can hold (all the amount of space inside an object). Volume is the amount of space that something takes up. A bottle can have a capacity of four full cups, but at a particular time it may have only one cup of liquid in it. Learners in grade 1 are not expected to know the difference between capacity and volume.</p> <p>All measurement in Grade 1 is informal. No formal measurement of capacity/volume with standard units is done.</p> <p>It is recommended that Mathematics lessons focus on capacity/volume in three terms of the year (Term 1, Term 2 and Term 4). The focus in Term 1 can be on developing language to talk about extremes and comparisons in volume, Term 2 can be on direct comparisons and in Term 3 learners can work with informal units of measurement. Learners can also practise and consolidate these concepts during independent work time throughout the year.</p> <p>Direct comparisons of the volumes in containers</p> <p>Developing an understanding of volume and the language to talk about it</p> <p>Learners begin to think and talk about volume by comparing how much is in identical two containers (or drawings of two identical containers) focus</p> <ul style="list-style-type: none"> full and empty more than/less than the same as <p>Learners can fill and empty containers using either water or sand etc. Since this does not require any numbers, it can be done early in Term 1 before learners consolidate their number and operation sense to 5.</p> <p>Recording</p> <p>Although measuring is a practical skill, learners should also do written exercises, which can include drawing and colouring, so that they practise:</p> <ul style="list-style-type: none"> using crayons or pencils; and recording when measuring. 	<p>1 lesson</p>

GRADE 1 TERM 1 5. DATA HANDLING			
TOPICS	CONCEPTS AND SKILLS REQUIREMENT BY YEAR END	CONCEPTS AND SKILLS FOCUS FOR TERM 1	DURATION (in lessons of 1 hour 24 minutes)
SOME CLARIFICATION NOTES OR TEACHING GUIDELINES			
Working with collections of objects			
5.1 Collect and sort objects	Collect and organise objects Collect and sort everyday physical objects.	Collect and organise objects Collect and sort everyday physical objects.	2 lessons
5.2 Represent sorted collection of objects	Represent sorted collection of objects Draw a picture of collected objects	Represent sorted collection of objects Draw a picture of collected objects.	
5.3 Discuss and report on sorted collection of objects	Discuss and report on sorted collection of objects <ul style="list-style-type: none"> Give reasons for how collection was sorted. Answer questions about <ul style="list-style-type: none"> how the sorting was done (process) what the sorted collection looks like (product) Describe the collection and drawing Explain how the collection was sorted 	Discuss and report on sorted collection of objects <ul style="list-style-type: none"> Give reasons for how collection was sorted Answer questions about <ul style="list-style-type: none"> how the sorting was done (process) what the sorted collection looks like (product) Describe the collection and drawing. Explain how the collection was sorted 	
<p>Sorting, representing and describing the sorted collection are useful skills for learners to develop early on in schooling (see notes on pre-number skills at the start of clarification notes). The process also develops the skills learners will use when doing the data handling cycle.</p> <p>Learners can be given collections of objects and asked to sort them. For example, give groups of the same kinds of counters and ask learner to sort them into colours, give collections of different kinds of counters such as bread tags, peach pips, matches, bottles tops and ask learners to sort them into groups.</p> <p>Learners then draw a picture of the groups that they have made. In this way learners record what they have done. They answers questions about the groups</p> <p>Example</p> <p>“How did you group your counters?” “ I made groups of colours.”</p> <p>“The biggest group of counters was which colour?” “My biggest group was red.”</p> <p>“How many different colours of counters did you have?” “I had five different colours.”</p> <p>Learners could also find their own collections. For example, learners can collect leaves from the school grounds, or bring empty food containers from home.</p>			

GRADE 1 TERM 2			
1. NUMBER, OPERATIONS AND RELATIONSHIPS			
TOPICS	CONCEPTS AND SKILLS REQUIREMENT BY YEAR END	CONCEPTS AND SKILLS FOCUS FOR TERM 1	SOME CLARIFICATION NOTES OR TEACHING GUIDELINES
NUMBER CONCEPT DEVELOPMENT: Count with whole numbers			DURATION (In lessons of 1 hour 24 minutes)
1.1 Count objects	Count out objects reliably to 50. <ul style="list-style-type: none"> Give a reasonable estimate of a number of objects that can be checked by counting. 	Count out objects reliably to 20 <ul style="list-style-type: none"> Give a reasonable estimate of a number of objects that can be checked by counting Counting by grouping is encouraged 	<p>What is different from Term 1?</p> <p>In Term 2, the counting number range is extended. There is still a focus on understanding that the last number named indicates the number of objects in a set. Learners are counting more objects and in Term 2 they should learn how to position the objects when counting so that when they check their count the arrangement helps them to count more easily.</p> <p>Example:</p>  <p>Ungrouped counters</p> <p>Counters arranged in groups counters</p> <p>During this term learners continue extending their counting skills and practising:</p> <ul style="list-style-type: none"> counting all; counting on; the cardinality principle of numbers; and working with written texts. <p>During the second term learners begin to:</p> <ul style="list-style-type: none"> Count objects they cannot touch or hold. <p>Example:</p> <p>We ask learners:</p> <p>How many sections are there in the window pane?</p> <ul style="list-style-type: none"> Count actions

<p>1.2 Count forwards and backwards</p>	<p>Count forwards and backwards in</p> <ul style="list-style-type: none"> ones from any number between <p>Count forwards in</p> <ul style="list-style-type: none"> 10s from any multiple of 10 between 1 and 100 5s from any multiple of 5 between 1 and 100 2s from any multiple of 2 between 1 and 100 	<p>Count forwards and backwards in</p> <ul style="list-style-type: none"> Ones from any number between <p>Count forwards in</p> <ul style="list-style-type: none"> 10s from any multiple of 10 between 1 and 50 5s from any multiple of 5 between 1 and 50 2s from any multiple of 2 between 1 and 20 	<p>What is different from Term 1? In Term, learners now count to in ones. They also count in intervals of and</p> <p>Verbal skip counting Skip counting is another name for counting in groups. It helps to develop an awareness of number patterns. Skip counting encourages learners to count and think in groups, which makes them more efficient. This also helps them develop their estimation skills. Counting in groups makes them aware of the relationships between non-consecutive numbers. It lays the basis for number patterning and for multiplication.</p> <p>Further activities Here are some suggestions for different ways of doing skip counting:</p> <ul style="list-style-type: none"> Start by counting consecutive numbers but emphasising every second one. For example learners can clap, and say every second number more loudly. Then ask the learners to count but to say every second number only in their heads. This can be extended to learners only saying the third, fourth or fifth number. You can divide the class into groups, and each group can take turns to say the next number. If, for example, you divide the class into five groups, each group must count every fifth number. Ask learners to make a physical pattern such as touching their heads on the first count, crossing over their arms and touching their shoulders on the second, and slapping their thighs as they shout out every third number. Beating or clapping time to music can be used in combination with skip counting. <p>Counting objects can develop verbal counting skills. In class, counting activities often develop several different skills. Skip counting is best introduced while practically grouping objects.</p> <p>Further activities Number Grids Ask learners to highlight the numbers they identify as they count in . Ask what they notice about the numbers. Vary the numbers that learners start from.</p>

How much is one more than three? How many counters do you need to make five? Ask, "What can you tell me about number 4?(It's one less than 5.) What can you tell me about number 2? (It's 3 less than 5.) Ordering numbers Learners need to order numbers using a variety of images. <ul style="list-style-type: none"> Grouping images Learners compare a group of 9 objects to a group of 2 objects. <ul style="list-style-type: none"> Line images When learners order numbers they might use the distance between numbers to know which number is bigger. For example, they will say that 9 is bigger than 2 because 9 comes after 2. The ordering of numbers can often be done during independent time. Further activities Ordering numbers Learners order number cards 1 to 13 from smallest to greatest. Learners turn their number cards up-side down. They choose any 4 cards, order these from smallest to greatest and ask a friend to check whether it is correct. If they mastered 4 cards they may choose 5 cards. They place them in the correct order and copy the numbers from smallest to greatest. Written tasks Learners need to consolidate their understanding by completing written tasks. Examples: By the end of the term they should be able to complete similar type sentences: 1 more than 3 is _____ 1 more than 4 is _____ 1 less than 2 is _____ _____ is 1 more than 4 _____ is 1 less than 3

<p>1.6 Problem-solving techniques</p>	<p>Use the following techniques when solving problems and explain solutions to problems:</p> <ul style="list-style-type: none"> • concrete apparatus e.g. counters • pictures to draw the story sum • building up and breaking down numbers • doubling and halving • number lines 	<p>Use the following techniques when solving problems and explain solutions to problems:</p> <ul style="list-style-type: none"> • concrete apparatus e.g. counters • pictures to draw the story sum • building up and breaking down numbers • doubling and halving • number lines supported by concrete apparatus e.g. counting beads 	<p>What is different from Term 1?</p> <p>During this term learners are introduced to doubling and halving for the first time. See the notes under the calculation section.</p> <p>By the end of this term learners are beginning to solve the word problems using the following techniques:</p> <ul style="list-style-type: none"> • drawings or concrete apparatus • building up or breaking down numbers • doubling and halving • number lines <p>Drawings or concrete apparatus</p> <p>Learners will continue to draw pictures and use concrete apparatus to solve problems. It is important that the pictures or drawings contain numbers as well as number sentences.</p> <p>Building up and breaking down</p> <p>This is one of the most important techniques in the Foundation Phase. Using this technique allows learners to split (decompose) and recombine numbers to help make calculations easier.</p> <p>Example</p> $6 + 4 \rightarrow 5 + 1 + 4 \rightarrow 5 + 5 \rightarrow 10$ <p>This technique is also used frequently in the intermediate phase.</p> <p>Doubling and halving</p> <p>This technique is quite sophisticated and requires a strong number sense. Learners who are able to choose this as a technique are quite flexible in the strategies they use.</p> <p>During this term learners start doubling numbers because they are calculating to 10. Before doubling and halving can be used as a calculation strategy the concept needs to be taught.</p> <p>In Grade 2 learners are presented with a number sentence and asked: "How can we use near doubling to work out the answer to $5 + 6 = \square$?" Learners realise that 5 and 6 are close to each other. Concrete apparatus is used to show that: "I am going to make double 5 which is two groups of five. I add the two fives and get 10 and then I have one left which I must still add. The answer is 11." Using their own language or drawings, learners can still use the technique. By Grade 3 learners will be able to apply the technique when calculating with three-digit numbers.</p> <p>During this term learners will use doubling and halving in the following way:</p>

So $5 - 2 = 3$</p>  <p>Written tasks</p> <p>Learners should be presented with a wide variety of images to support the understanding of addition and subtraction.</p> <p>They also need written tasks that ask explicitly to:</p> <ul style="list-style-type: none"> count on; add by counting on from the bigger number; or subtract by crossing out the pictures to show taking away. <p>Concept of doubling</p> <p>The number range learners are working with allows them to start doubling. This can be introduced in many ways and can also be done when learners are counting objects.</p> <p>Example: Learners can make groups of 2 counters, 4 counters, 6 counters, 8 counters and 10 counters. Number sentences should accompany the images.</p> 	

TOPICS	CONCEPTS AND SKILLS REQUIREMENT BY YEAR END	CONCEPTS AND SKILLS FOCUS FOR TERM 1	SOME CLARIFICATION NOTES OR TEACHING GUIDELINES	DURATION (In lessons of 1 hour 24 minutes)
<p>1.14 Repeated addition leading to multiplication</p>	<ul style="list-style-type: none"> Repeated addition (i.e. the same number) to 20 Use appropriate symbols (+, =, □) 	<ul style="list-style-type: none"> Repeated addition (i.e. the same number) to 10 Use appropriate symbols (+, =, □) 	<p>What is different from Term 1? In Term 2, learners start doing repeated addition to 10. Once learners have a really good concept of the numbers 1 to 5, repeated addition will make sense to them.</p> <p>Repeated addition should be introduced to learners as groups of equivalent numbers. Working with grouped objects is important for the understanding of multiplication. Learners should be able</p> <ul style="list-style-type: none"> to make equivalent groups of objects; describe the arrangement; and count the total number of objects. <p>Initially learners will count in ones but as they become fluent in skip counting they need to count the objects arranged in twos, fives or tens.</p> <p>Learners should be exposed to many different images that will support the understanding of repeated addition</p> <p>It might be useful to introduce learners to pictures of everyday equivalent groupings, for example:</p> <p>Groups of 2 - hands, feet, socks, gloves, shoes, ears, bicycle wheels Groups of 3 - tricycle wheels, edges of triangles</p> <p>Example:</p> <p>How many wheels altogether?</p>  <p>How many fingers. Complete the number sentence below. □ + □ + □ = 15</p> <p>Recording images of repeated addition The focus here is on the development of language to support the understanding of multiplication. Learners will record their understanding using pictures. Learners should be given pictures of grouped objects and they draw circles around these to show groups of objects.</p>  <p>The language that can be used is 2 lots of 3 or 2 groups of 3. When learners are confident in describing pictorial representations using language they can describe these in a number sentence. The number sentence: 3 + 3 = 6</p>

Examples of questions and activities that can be asked and done:</p> <ul style="list-style-type: none"> Start with 3 and count forwards in ones to 10. Which is less 8 or 5? Which is more 8 or 4? What is 2 less than 9? What is 2 more than 3? Give me a number between 1 and 3. Give me a number between 6 and 10. Is there only one number? Put these number cards in order from the smallest to the biggest number. 	

GRADE 1 TERM 2			
2. PATTERNS, FUNCTIONS AND ALGEBRA			
TOPICS	CONCEPTS AND SKILLS REQUIREMENT BY YEAR END	CONCEPTS AND SKILLS FOCUS FOR TERM 2	SOME CLARIFICATION NOTES OR TEACHING GUIDELINES
2.1 Geometric patterns	<p>Copy, extend and describe Copy, extend and describe in words</p> <ul style="list-style-type: none"> • simple patterns made with physical objects • simple patterns made with drawings of lines, shapes or objects <p>Create own patterns Create own geometric patterns</p> <ul style="list-style-type: none"> • with physical objects • by drawing lines, shapes or objects <p>Patterns all around us Identify, describe in words and copy geometric patterns</p> <ul style="list-style-type: none"> • in nature • from modern everyday life • from our cultural heritage 	<p>Copy, extend and describe Copy, extend and describe in words</p> <ul style="list-style-type: none"> • simple patterns made with physical objects • simple patterns made with drawings of lines, shapes or objects <p>Create own patterns Create own geometric patterns</p> <ul style="list-style-type: none"> • with physical objects • by drawing lines, shapes or objects 	<p>Copying the pattern helps learners to see the logic of how the pattern is made.</p> <p>Extending the pattern helps learners to check that they have properly understood the logic of the pattern.</p> <p>Describing the pattern helps learners to develop their language and speaking skills. It also helps you to see how learners have interpreted the pattern.</p> <p>In Grade 1 learners can focus on patterns in which objects or groups of objects are repeated in exactly the same way.</p> <p>By Term 2 most learners are comfortable with using a crayon or pencil to draw. Learners can progress to copying and extending patterns made with pictures instead of objects. They should also focus on describing patterns. It is not always easy for learners to describe a pattern. You can help them learn what they are expected to talk about by asking questions such as:</p> <p>“What shapes do you see in this pattern?”</p> <p>“Are they all the same colour?”</p> <p>“Do you see one or more shapes in the pattern?”</p> <p>“Do the objects all face the same way?”</p> <p>“Are there the same number of objects in each group?”</p> <p>“How many objects in each group?”</p> <p>“Are all the shapes the same size?” etc.</p> <p>In Term 2 some of the focus can be on using 2-D geometric shapes and 3-D geometric objects that learners have learned about in Term 1. Learners can make 2-D shapes by cutting out paper or card, or they can draw them. They can make patterns from box shapes and ball shapes that they have made from clay or play dough.</p> <p>Patterns can be made by using one shape but having the colours of the object change in a regular way e.g.</p>  <p>It is useful in Grade 1 to help learners to see what grouping is being repeated, by placing each group on a different piece of paper, or showing it within a block on the page</p>

TOPICS	CONCEPTS AND SKILLS REQUIREMENT BY YEAR END	CONCEPTS AND SKILLS FOCUS FOR TERM 2	SOME CLARIFICATION NOTES OR TEACHING GUIDELINES	DURATION (in lessons of 1 hour 24 minutes)
<p>2.1 Geometric patterns</p>	<p>Copy, extend and describe Copy, extend and describe in words</p> <ul style="list-style-type: none"> • simple patterns made with physical objects • simple patterns made with drawings of lines, shapes or objects <p>Create own patterns Create own geometric patterns</p> <ul style="list-style-type: none"> • with physical objects • by drawing lines, shapes or objects <p>Patterns all around us Identify, describe in words and copy geometric patterns</p> <ul style="list-style-type: none"> • in nature • from modern everyday life • from our cultural heritage 	<p>Copy, extend and describe Copy, extend and describe in words</p> <ul style="list-style-type: none"> • simple patterns made with physical objects • simple patterns made with drawings of lines, shapes or objects <p>Create own patterns Create own geometric patterns</p> <ul style="list-style-type: none"> • with physical objects • by drawing lines, shapes or objects 	<p>Patterns can be made from identical repeating groups, where each group has only one kind of object but the position of the objects in a group changes. Identical groups are repeated e.g.</p>  <p>In some patterns different objects are used to make up a group, but the groups of objects are repeated in exactly the same way e.g.</p>  <p>In some patterns the size of objects in a group alternates, but groups are repeated in exactly the same way</p>  <p>Learners can make patterns by threading beads. Patterning can also be done in the Life Skills lesson.</p>	<p>1 lesson</p>

<p>4.4 Capacity/ Volume</p>	<p>Informal measuring</p> <ul style="list-style-type: none"> Compare and order the amount of liquid (volume) in two containers placed next to each other. Learners check by pouring into a third container if necessary Compare and order the amount of liquid that two containers can hold if filled (capacity) Use language to talk about the comparison e.g. more than, less than, full, empty Estimate and measure, compare and order the capacity of containers by using non-standard measures e.g. spoons and cups 	<p>Informal measuring</p> <ul style="list-style-type: none"> Compare and order the amount of liquid (volume) in two containers placed next to each other. Learners check by pouring into a third container if necessary Compare and order the amount of liquid that two containers can hold if filled (capacity) Use language to talk about the comparison e.g. more than, less than, full, empty Estimate, measure, compare, order and record the capacity of containers by using non-standard measures e.g. spoons and cups 	<p>All measurement in Grade 1 is informal. No formal measurement of length with standard units is done.</p> <p>The recommended focus in Term 1 was on developing language to talk about extremes and comparisons in volume.</p> <p>The focus in Term 2 can be on direct comparisons.</p> <p>The focus in Term 4 can be learners working with informal units of measurement. Learners can also practise and consolidate these concepts during independent work time throughout the year.</p> <p>Direct comparisons of the volumes in containers</p> <ul style="list-style-type: none"> Developing an understanding of volume and the language to talk about it <p>Learners begin to think and talk about volume by comparing how much is in identical two containers (or drawings of two identical containers). The focus is on</p> <ul style="list-style-type: none"> full and empty; more than/less than; and the same as. <p>Learners fill and empty containers</p> <ul style="list-style-type: none"> Compare volumes of two or more, different-looking containers by pouring into a third container. <p>Once learners can talk about the extremes of volume (empty and full etc.) and compare the volumes (that are obviously different at first glance) in two identical containers, they can move on to comparing the volumes in two different-looking containers. Focus especially on wide and narrow containers e.g.</p> <ul style="list-style-type: none"> fill to the same level a 2 litre bottle and 500 ml bottle; and ask learners which bottle containers more. <p>Learners can check by pouring the liquid into a third container and marking off the height.</p> <p>Young learners often do not consider how wide a container is when commenting on the volume; they tend only to look at how far up the container is filled.</p> <p>Learners should be given lots of experience in comparing the volumes in containers with different widths.</p> <p>Recording</p> <p>Learners should record all the work.</p>	<p>2 lessons</p>

GRADE 1 TERM 2 5. DATA HANDLING			
CONCEPTS AND SKILLS REQUIREMENT BY YEAR END		CONCEPTS AND SKILLS FOCUS FOR TERM 2	DURATION (in lessons of 1 hour 24 minutes)
TOPICS	SOME CLARIFICATION NOTES OR TEACHING GUIDELINES		
Working with collections of objects			
5.1 Collect and sort objects	Collect and organise objects Collect and sort everyday physical objects.	Collect and organise objects Collect and sort everyday physical objects.	1 lesson
5.2 Represent sorted collection of objects	Represent sorted collection of objects Draw a picture of collected objects.	Represent sorted collection of objects Draw a picture of collected objects.	
5.3 Discuss and report on sorted collection of objects	Discuss and report on sorted collection of objects <ul style="list-style-type: none"> Give reasons for how collection was sorted Answer questions about <ul style="list-style-type: none"> how the sorting was done (process) what the sorted collection looks like (product) Describe the collection and drawing Explain how the collection was sorted 	Discuss and report on sorted collection of objects <ul style="list-style-type: none"> Give reasons for how collection was sorted. Answer questions about <ul style="list-style-type: none"> how the sorting was done (process) what the sorted collection looks like (product) Describe the collection and drawing Explain how the collection was sorted 	
It is recommended that working the data handling cycle is the focus of Terms 3 and 4.			

GRADE 1 TERM 3			
1. NUMBER, OPERATIONS AND RELATIONSHIPS			
TOPICS	CONCEPTS AND SKILLS REQUIREMENT BY YEAR END	CONCEPTS AND SKILLS FOCUS FOR TERM 1	DURATION (in lessons of 1 hour 24 minutes)
		SOME CLARIFICATION NOTES OR TEACHING GUIDELINES	
NUMBER CONCEPT DEVELOPMENT: Count with whole numbers			
1.1 Count objects	Count out objects reliably to 50. Give a reasonable estimate of a number of objects that can be checked by counting.	Count out objects reliably to 40 Give a reasonable estimate of a number of objects that can be checked by counting.	<p>What is different from Term 2?</p> <p>In Term 3, learners extend the counting range. There is still a focus on understanding the cardinality principle. During this term learners should learn how to position the objects systematically when counting so that when they check their count, the arrangement helps them to count more easily. For example, counters could be placed in rows.</p>  <p>During this term learners continue extending their counting skills and practising:</p> <ul style="list-style-type: none"> • counting all; • counting on.; • the cardinality principle of numbers; and • working with written texts. <p>Subitising</p> <p>Learners continue practising recognising a small collection of objects.</p> <p>Counting in groups</p> <p>In order to help learners count in intervals of two, five and 10, they need to group objects in twos, fives and tens in order to count a collection of objects. Number cards should be displayed at each collection to show the number of objects counted. The counting in groups will prepare learners for understanding multiples.</p> <p>Resources:</p> <p>Careful consideration needs to be given to the kind of apparatus used.</p> <ul style="list-style-type: none"> • Structured apparatus, such as a string of counting beads, can be used. • The abacus can be used to practice counting in groups of ten. • They can make bundles of 2, bundles of 5 and ten with matchsticks or counting sticks and then count all.

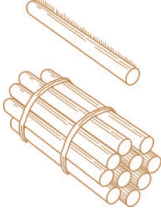

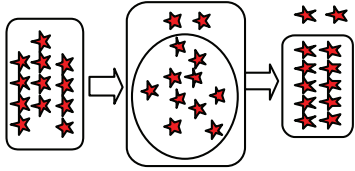

TOPICS	CONCEPTS AND SKILLS REQUIREMENT BY YEAR END	CONCEPTS AND SKILLS FOCUS FOR TERM 2	SOME CLARIFICATION NOTES OR TEACHING GUIDELINES	DURATION (in lessons of 1 hour 24 minutes)
<p>1.2 Count forwards and backwards</p>	<p>Count forwards and backwards in</p> <ul style="list-style-type: none"> 1s from any number between 0-100 <p>Count forwards in</p> <ul style="list-style-type: none"> 10s from any multiple of 10 between 0 and 100 5s from any multiple of 5 between 0 and 100 2s from any multiple of 2 between 0 and 100 	<p>Count forwards and backwards in</p> <ul style="list-style-type: none"> 1s from any number between 0 - 80 <p>Count forwards in</p> <ul style="list-style-type: none"> 10s from any multiple of 10 between 0 and 80 5s from any multiple of 5 between 0 and 80 2s from any multiple of 2 between 0 and 80 	<p>What is different from Term 1?</p> <p>In Term 3, learners now count to 80. They continue to count in multiples of 2, 5 and 10.</p> <p>Further activities:</p> <p>Whole class activities</p> <ul style="list-style-type: none"> Count forwards and backwards up to 80 Learners count forwards and backwards. Teacher points to the numbers on the number grid as learners count to 70. Learners count in fives from 25 to 60. Learners count in tens forwards from 0 to 80. <p>Skip-count using 5s and 10s up to number 80</p> <ul style="list-style-type: none"> Learners count in 10s up to 50 as teacher points to the number chart. Teacher points to a multiple of 5 on a 100 chart and learners count. Learners count forwards and backwards in 10s. <p>Using the 100 chart, they should respond to similar type instructions:</p> <ul style="list-style-type: none"> Count on in tens from 20. Count back in ones from 56. 80, 70, 60: say the next three numbers using your 100 chart. <p>Independent work</p> <p>The skip counting skills need to be applied to written activities. Example:</p> <p>Learner scan:</p> <ul style="list-style-type: none"> Complete simple number sequences; and fill in missing numbers on a number track and number line <p>Write the next two numbers 66, 65, 64, _____, _____.</p>

TOPICS	CONCEPTS AND SKILLS REQUIREMENT BY YEAR END	CONCEPTS AND SKILLS FOCUS FOR TERM 2	SOME CLARIFICATION NOTES OR TEACHING GUIDELINES	DURATION (in lessons of 1 hour 24 minutes)
<p>1.5 Place value</p>	<p>Recognise the place value of at least two-digit numbers to 20</p> <ul style="list-style-type: none"> Partition two-digits numbers into tens and ones to 20 e.g. 12 is 10 and 2 	<p>Recognise the place value of at least 2-digit numbers to 15</p> <ul style="list-style-type: none"> Partition two-digits numbers into tens and ones to 15 e.g. 12 is 10 and 2 	<p>What is different from Term 2?</p> <p>During this term learners begin to break up numbers into tens and ones/units using:</p> <ul style="list-style-type: none"> grouping of objects to tens; and the written form $14 = 10$ and 4. <p>A complete understanding of place value develops across the Foundation and Intermediate Phase. During Grade 1 learners begin to think about groups of ten things or objects as a unit. They begin to make a transition from seeing ten as ten loose ones to now seeing 10 as a single unit or as 1 ten.</p> <p>To begin to understand place value in this term, learners need to:</p> <ul style="list-style-type: none"> know their number names and count in sequence confidently to at least 20; write and read number symbols; do simple addition and subtraction; count physical objects by grouping; and be able to represent the groups. <p>Breaking down numbers into tens and ones/units</p> <p>The focus in Grade 1 is on making groups of tens and loose ones.</p> <p>Before breaking down numbers into tens and ones, learners should have had sufficient practice in breaking down numbers in different ways in Terms 1 and 2. This should have been done practically and in written form.</p> <p>Using concrete apparatus</p> <p>Concrete models are useful in building learners' number sense, representing numbers and the principle of place value. When counting in tens and grouping in tens, learners will begin to understand that multiples of 10 provide bridges when counting e.g. 26, 27, 28, 29, 30, 31. They should begin to be aware that the word and symbol 10 represents a single unit.</p> <p>Working with concrete apparatus by grouping objects to form ten ones and understanding that 10 is one group of ten loose ones. Simply showing learners a group of ten and telling them that 14 is 1 ten and 4 loose ones will not construct the idea that 14 is 1 ten and 4 loose ones. Grouping loose objects to make a group of ten is more meaningful.</p> <p>Using an abacus, learners should be able to show:</p> <ul style="list-style-type: none"> one ten; one ten and 2 ones; one ten and 3 ones; and one ten and 4 ones.

<p>4.2 Length</p>	<p>Informal measuring</p> <ul style="list-style-type: none"> Compare and order the length, height or width of two or more objects, by placing them next to each other Use language to talk about the comparison e.g. longer, shorter, taller, wider Estimate, measure, compare, order and record length using non-standard measures e.g. hand spans, paces, pencil lengths, counters etc. 	<p>Informal measuring</p> <ul style="list-style-type: none"> Estimate, measure, compare, order and record length using non-standard measures e.g. hand spans, paces, pencil lengths, counters etc. 	<p>What is different in Term 3?</p> <p>All measurement in Grade 1 is informal. No formal measurement of length with standard units is done.</p> <p>In Term 1 it was recommended that learners focus on</p> <ul style="list-style-type: none"> direct comparison of the length of objects by placing them next to each other; ordering and comparing the lengths or heights or widths of three or more objects, by placing pairs of objects next to each other, until all objects can be sequenced; and develop the language to talk about differences in length, height, width etc. <p>During independent work time throughout the term, learners can practise and consolidate ordering and comparing the lengths or heights or widths of three or more objects, by placing pairs of objects next to each other, until all objects can be sequenced.</p> <p>All work should be recorded.</p> <p>In Term 3 learners can focus on doing informal measurement with non-standard units of length.</p> <p>Informal measurement of length using non-standard units of length</p> <p>Learners can learn all the principles and practices of measurement using non-standard units. Measuring with non-standard units should not be considered to be inferior to measuring with standard units.</p> <p>Measuring length with non-standard units involves counting how many of the chosen unit are the same length as the object being measured. For example the length of the desk is 8 hand spans.</p> <p>Learners should measure a variety of objects using a range of objects as informal units. There are three ways to use informal units</p> <ul style="list-style-type: none"> Pack out in a row across the object being measured a number of objects of the same length, such as matchboxes, identically shaped bottle tops or counters, new pencils etc. For example, to measure the width of a desk, new pencils can be packed out end to end across the desk. Here it is important that All the objects are the same length. You cannot state that your book is as wide as 12 bottle tops if the bottle tops are of different sizes e.g. 2 litre milk bottle tops, plastic cool drink bottle tops, metal bottle tops etc.; and No gaps are left between the objects: they need to be packed out so that they touch one another. Use two identical objects as the non-standard units. Place the one next to the other, and then move the first to the other side of the second. This is done when measuring with hand spans, foot lengths or paces. Using only one object as the non-standard measure and either flipping it over or marking its end point before sliding it along. 	<p>2 lessons</p>

TOPICS	CONCEPTS AND SKILLS REQUIREMENT BY YEAR END	CONCEPTS AND SKILLS FOCUS FOR TERM 3	SOME CLARIFICATION NOTES or TEACHING GUIDELINES	DURATION (in lessons of 1 hour 24 minutes)
<p>4.2 Length</p>	<p>Informal measuring</p> <ul style="list-style-type: none"> • Compare and order the length, height or width of two or more objects. by placing them next to each other • Use language to talk about the comparison e.g. longer, shorter, taller, wider • Estimate, measure, compare, order and record length using non-standard measures e.g. hand spans, paces, pencil lengths, counters etc. 	<p>Informal measuring</p> <ul style="list-style-type: none"> • Estimate, measure, compare, order and record length using non-standard measures e.g. hand spans, paces, pencil lengths, counters etc. 	<p>Learners should be taught always to state the unit, e.g. the book is 12 bottle tops wide, the classroom is 38 paces long.</p> <p>Once learners have measured with any unit a couple of times, they should estimate about how many of that unit long the object to be measured is. Estimation before measuring is important, but can only be done once learners have done some measuring with that unit.</p> <p>Learners need to be taught that in order to compare lengths, heights or widths the same unit needs to be used. For example, if the width of the doorway measured is 20 hand spans and the width of the desk is 8 pencil lengths, you cannot say whether the doorway is wider than the desk.</p> <p>Learners need to measure with a range of informal units, so that they can</p> <ul style="list-style-type: none"> • begin to understand that the smaller the unit, the larger the number of times it will be used, e.g. the width of the classroom could be 20 paces but 48 foot lengths; and • begin to use units which are appropriate to what they are measuring, e.g. measuring the width of the classroom with bottle tops is a waste of time. <p>Recording measurements</p> <p>Although measuring is a practical skill, learners should record their measurements at all times.</p> <p>Measuring length as a context for solving problems and calculations</p> <p>During time allocated to Numbers, Operations and Relationships learners can solve problems that use the context of informal measurement of length, e.g. The washing powder box has a height of 8 matches. The cereal box has a height of 13 matches. How much higher is the cereal box than the washing powder box?</p> <p>Take account of the number range appropriate for the term, as well as the range of problems types appropriate for the term.</p>	<p>2 lessons</p>

TOPICS	CONCEPTS AND SKILLS REQUIREMENT BY YEAR END	CONCEPTS AND SKILLS FOCUS FOR TERM 3	SOME CLARIFICATION NOTES or TEACHING GUIDELINES	DURATION (in lessons of 1 hour 24 minutes)
<p>4.3 Mass</p>	<p>Informal measuring</p> <ul style="list-style-type: none"> Estimate, measure, compare, order and record mass using non-standard measures and a balance e.g. blocks, bricks etc. Use language to talk about the comparison e.g. light, heavy, lighter, heavier 		<p>All measurement in Grade 1 is informal. No formal measurement of mass with standard units is done.</p> <p>In Term 1 it was recommended that learners focus on</p> <ul style="list-style-type: none"> directly comparing the mass of objects; ordering and comparing the masses of three or more objects, by placing pairs of objects on a balance, until all objects can be sequenced; and develop the language to talk about differences in mass. <p>During Independent Work Time throughout the term, learners can practise and consolidate ordering and comparing the masses of 3 or more objects, by placing pairs of objects on a balance, until all objects can be sequenced</p> <p>All work should be recorded.</p>	
<p>4.4 Capacity/ Volume</p>	<p>Informal measuring</p> <ul style="list-style-type: none"> Compare and order the amount of liquid (volume) in two containers placed next to each other. Learners check by pouring into a third container if necessary Compare and order the amount of liquid that two containers can hold if filled (capacity) Use language to talk about the comparison e.g. more than, less than, full, empty Estimate and measure, compare and order the capacity of containers by using non-standard measures e.g. spoons and cups 		<p>All measurement in Grade 1 is informal. No formal measurement of length with standard units is done.</p> <p>So far during the year the focus in capacity/volume has been on</p> <ul style="list-style-type: none"> developing language to talk capacity/volume; comparing volumes in two identical containers; and comparing volumes in containers with different widths, by pouring into a third container. <p>See notes for Term 2.</p> <p>Learners can also practise and consolidate these concepts during independent work time.</p>	

GRADE 1 TERM 3 5. DATA HANDLING		SOME CLARIFICATION NOTES OR TEACHING GUIDELINES		DURATION (in lessons of 1 hour 24 minutes)
TOPICS	CONCEPTS AND SKILLS REQUIREMENT BY YEAR END	CONCEPTS AND SKILLS FOCUS FOR TERM 1		
Working with collections of objects				
5.1 Collect and sort objects	Collect and organise objects Collect and sort everyday physical object	Sorting collections of objects is no longer a specific focus in the second half of the year. However, it can be given as an occasional activity during independent work time. The recommended focus in Term 3 is the data handling cycle: see below.		
5.2 Represent sorted collection of objects	Represent sorted collection of objects Draw a picture of the collected objects			
5.3 Discuss and report on sorted collection of objects	Discuss and report on sorted collection of objects <ul style="list-style-type: none"> • Give reasons for how the collection was sorted • Answer questions about <ul style="list-style-type: none"> - how the sorting was done (process) - what the sorted collection looks like (product) • Describe the collection and drawing. • Explain how the collection was sorted 			

TOPICS	CONCEPTS AND SKILLS REQUIREMENT BY YEAR END	CONCEPTS AND SKILLS FOCUS FOR TERM 3	SOME CLARIFICATION NOTES or TEACHING GUIDELINES	DURATION (in lessons of 1 hour 24 minutes)
Working with data				
5.4 Collect and organise data	Collect and organise data <ul style="list-style-type: none"> Collect data about the class or school to answer questions posed by the teacher Represent data Represent data in pictograph	Collect and organise data Collect data about the class or school to answer questions posed by the teacher.	Recommended focus: The complete data handling cycle In the data handling cycle <ul style="list-style-type: none"> Learners collect information to answer a question. In the Foundation and Intermediate Phase this question is normally provided by the teacher or textbook; Learners sort and represent the information in ways which make it easier to analyse. The form of representation that learners in Grade 1 practise is a pictograph; and Learners analyse the information in the pictograph by answering questions posed by the teacher. A class pictograph In Grade 1 it is useful to start data handling by making a class picture graph. Working together as a class helps learners to be involved in all the stages of the process without getting lost in the detail of any stage.	3 lessons
5.5 Represent data	Represent data Represent data in pictograph	Represent data <ul style="list-style-type: none"> Represent data in pictograph Analyse and interpret data <ul style="list-style-type: none"> Answer questions about data in pictograph 	Making a allows the teacher to focus the learners on the key aspects of data handling and also on what they need to know about the important features of a pictograph <ul style="list-style-type: none"> where and how to label the graph (graph title) where and how to label the categories the pictograph needs to have a key which explains what each picture means the pictures or the spaces for pictures need to be the same size how to place the pictures evenly in rows how to read the graph Working through the whole data cycle can take several lessons.	
5.6 Analyse and interpret data	Analyse and interpret data <ul style="list-style-type: none"> Answer questions about data in pictograph 		Collect, organise and represent data Teachers in the phase should ensure that different topics are chosen for data collection and analysis in each of the grades. Suitable examples include re-arranging the previous month's daily weather chart to form a pictograph or making a pictograph of learners' birthdays. Analyse data Learners answer questions such as: "What kind of weather was most common this month?" What kind of weather was least common this month?" "How many more sunny days than cloudy days did we have?" Working through the whole data cycle can take several lessons.	

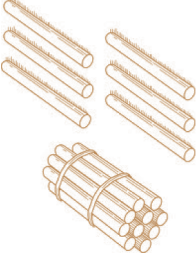

GRADE 1 TERM 4			
1. NUMBERS, OPERATIONS AND RELATIONSHIPS			
TOPICS	CONCEPTS AND SKILLS REQUIREMENT BY YEAR END	CONCEPTS AND SKILLS FOCUS FOR TERM 1	SOME CLARIFICATION NOTES OR TEACHING GUIDELINES
NUMBER CONCEPT DEVELOPMENT: Count with whole numbers			DURATION (in lessons of 1 hour 24 minutes)
1.1 Count objects	Count out objects reliably to 50 Give a reasonable estimate of a number of objects that can be checked by counting.	Count out objects reliably to 50 Give a reasonable estimate of a number of objects that can be checked by counting.	<p>What is different from Term 3?</p> <p>In Term 4, learners extend the counting range. There is still focus on understanding the cardinality principle. During this term learners should learn how to position the objects systematically when counting so that when they check their count, the arrangement helps them to count more easily. Example: Counters could be placed in rows.</p> <p>During this term learners continue extending their counting skills and practising:</p> <ul style="list-style-type: none"> • counting all; • counting on; • the cardinality principle of numbers; and • working with written texts. <p>Learners need to make the link between ordinal and cardinal counting. This is achieved when they realise that stopping the count on reaching the 50th object means that they have counted 50 objects. At the same time they now know that the order in which one counts the objects does not affect the count.</p> <p>Counting in groups</p> <p>In order to help learners count in intervals of two, five and 10 they need to group objects in 2s, 5s and 10s. Number cards should be displayed at each collection to show the number of objects counted. Counting in groups will prepare learners for understanding multiples and calculating. By the end of the term learners should be able to recognise a collection by splitting up the number. Example: "I know that is 10 because I put 4 on one side and 6 on the other side".</p> <p>Resources:</p> <p>Careful consideration needs to be given to the kind of apparatus used.</p> <ul style="list-style-type: none"> • Structured apparatus, such as a string of counting beads, can be used. • The abacus can be used to practise counting in groups of ten. • Learners can make bundles of 2, bundles of 5 and ten and then count all.

TOPICS	CONCEPTS AND SKILLS REQUIREMENT BY YEAR END	CONCEPTS AND SKILLS FOCUS FOR TERM 1	SOME CLARIFICATION NOTES OR TEACHING GUIDELINES	DURATION (in lessons of 1 hour 24 minutes)
<p>1.2 Count forwards and backwards</p>	<p>Count forwards and backwards in</p> <ul style="list-style-type: none"> • 1s from any number between 0 and 100 • Count forwards in • 10s from any multiple of 10 between 0 and 100 • 5s from any multiple of 5 between 0 and 100 • 2s from any multiple of 2 between 0 and 100 	<p>Count forwards and backwards in</p> <ul style="list-style-type: none"> • 1s from any number between 0 and 100 • Count forwards in • 10s from any multiple of 10 between 0 and 100 • 5s from any multiple of between 0 and 100 • 2s from any multiple of 2 between 0 and 100 	<p>What is different from Term 1?</p> <p>In Term 4, learners now count in intervals of and to . The counting in intervals become an important skill that learners will use in Grade 2 and 3 and will help learners when doing their calculations.</p> <p>By the end of the term learners should be able to:</p> <p>Count verbally and respond to questions such as:</p> <ul style="list-style-type: none"> • Start at 52 count on in ones to 72 • Start at 88 and count back in ones to 70 • Start at 38 and count in twos to 50 • Start at 45 and count in fives to 100 • Start at 10 and count in tens to 100 <p>Learners should be able to apply their counting skills to written activities. Example:</p> <ul style="list-style-type: none"> • Copy and extend simple number sequences to at least 100. See section on number patterns

<p>1.13 Addition and Subtraction</p>	<ul style="list-style-type: none"> • Add to 20 • Subtract from 20 • Use appropriate symbols (+, −, =, □) • Practice number bonds to 10 		<p>Doing addition and subtraction within the number range 0 - 20 means that learners will:</p> <ul style="list-style-type: none"> • begin to develop place value concepts of tens and ones; • continue to count in groups; and • start realising that counting on in ones is not an efficient strategy. <p>Learners will continue to:</p> <ul style="list-style-type: none"> • count objects; • recognise, read and write numbers; and • compare and order numbers. <p>In order to work with the symbols of addition and subtraction, learners should have had sufficient experience to:</p> <ul style="list-style-type: none"> • count all; • count on from the larger number; • use and understand the language of addition and subtraction; and • order and compare numbers. <p>Learners continue to build their understanding of addition and subtraction.</p> <p>By the end of the year learners should be able to:</p> <ul style="list-style-type: none"> • use the vocabulary related to addition and subtraction and symbols to describe and record addition and subtraction number sentences; • use practical and informal written methods to do addition and subtraction; • solve addition and subtraction calculations and can record their answers in number sentence and; • understand that subtraction is the inverse of addition and vice versa and use this to derive and record calculations. 	

TOPICS	CONCEPTS AND SKILLS REQUIREMENT BY YEAR END	CONCEPTS AND SKILLS FOCUS FOR TERM 1	SOME CLARIFICATION NOTES OR TEACHING GUIDELINES	DURATION (in lessons of 1 hour 24 minutes)
<p>1.13 Addition and Subtraction</p>	<ul style="list-style-type: none"> • Add to 20 • Subtract from 20 • Use appropriate symbols (+, − =, □) • Practice number bonds to 10 		<p>To understand addition and subtraction learners should be able to:</p> <ul style="list-style-type: none"> • know and use the fact that the order of addition does not matter; • use the +, − and = signs; • know that □ stands for an unknown number; • understand subtraction as ‘taking away’ and ‘finding the difference between’; and • say and write corresponding number facts to a given addition fact and vice versa <p>Example: $8 + 6 = 14$ implies that $14 - 6 = 8$.</p> <p>Recording images of addition and subtraction: While some learners may still want to record and count in 1s, they need to be assisted to start recording and counting in groups. They should be able to: Draw pictures and use numbers, especially showing groups.</p> <p>Breaking down a number into smaller parts to make calculation easier Learners will break up a number into different parts. They will break up a number into parts that are manageable for them. Learners will initially break up the seven into ones. However, once the number facts to 10 are intuitive and learners can work with the numbers at an abstract level, they should break up seven into different parts. Using arrows and numbers to show thinking $11 + 7 = \square$ $11 + 4 + 3$ $11 + 4 \rightarrow 15 + 3 = 18$</p> $11 + 7 = \square$ $11 + 5 + 2$ $11 + 5 \rightarrow 16 + 2 = 18$ $17 - 9 = \square$ $17 - (7 + 2)$ $17 - 7 \rightarrow 10 - 2 = 8$	

TOPICS	CONCEPTS AND SKILLS REQUIREMENT BY YEAR END	CONCEPTS AND SKILLS FOCUS FOR TERM 1	SOME CLARIFICATION NOTES OR TEACHING GUIDELINES	DURATION (in lessons of 1 hour 24 minutes)
<p>1.13 Addition and Subtraction</p>	<ul style="list-style-type: none"> • Add to 20 • Subtract from 20 • Use appropriate symbols (+, −, =, □) • Practice number bonds to 10 		<p>Number bonds In order to practise the number bonds, learners must be given a variety of activities to do. This is ideally done during independent time. The number line can also be used to practise the bonds to 10. Using and applying previous knowledge as techniques The techniques shown below allow learners to formalise their counting and number sense. Practising the techniques below will encourage learners to reflect upon the relationships between numbers and teach learners that they can actually use and apply their knowledge to help calculate. Put the greater number first in order to count on or back. $4 + 12 = \square$ Rearrange $4 + 12$ as $12 + 4$ and count on from 12 Count on from the bigger number Learners should be able to count on from the bigger number. This is a far more efficient strategy than counting in ones to 14 and then count in five more. $14 + 5 = \square$ Learners count from 14, then 15, 16, 17, 18, 19 Identify near doubles $8 + 7$ The learner can explain that the sum can be written as $8 + 8 - 1$ (double 8 minus 1) or $7 + 7 + 1$ (double 7 plus 1). Learners might record their strategies using arrows: $8 + 8 \rightarrow 16 - 1 = 15$ Change a number to ten and then subtract or add ones This strategy can be taught with quite low number ranges and applied to higher numbers. $9 + 6 = \square$ The learners can say to themselves: "I will take one away from the 6 and add it to the 9 to make 10." There $9 + 6$ can be written as $10 + 5 = 15$ $8 + 5 = \square$ The learners can say to themselves: "I will take two away from the 5 and add it to the 8 to make 10." There $8 + 5$ can be written as $10 + 3 = 13$</p>

<p>2.2 Number patterns</p>	<p>Copy, extend and describe Copy, extend and describe simple number sequences to at least 100.</p> <p>Create own patterns Create own number patterns.</p>	<p>Copy, extend and describe Copy, extend and describe simple number sequences to at least 100.</p> <p>Sequences should show</p> <ul style="list-style-type: none"> • counting forwards and backwards in 1s from any number between 1 and 100 • counting forwards in: <ul style="list-style-type: none"> - 10s from any multiple of 10 between 0 and 100 - 5s from any multiple of 5 between 0 and 100 - 2s from any multiple of 2 between 0 and 100 <p>Create own patterns Create own number patterns.</p>	<p>Number sequences can be linked with counting. As learners' counting skills change and develop, the kinds of number sequences learners work with can develop.</p> <p>Sequences should show counting forwards and backwards in:</p> <ul style="list-style-type: none"> • 1s from any number between 1 and 100 • 10s from any multiple of 10 between 0 and 100 • 5s from any multiple of 5 between 0 and 100 • 2s from any multiple of 2 between 0 and 100 <p>Learners can point to numbers on a number line, a number grid, or written sequences as they count.</p> <p>Learners can cover (with counters) or colour or circle numbers on a number line, a number grid, or written sequences as they count</p> <p>Learners can fill in missing numbers in a written sequence, on a number line or on a number grid to practise counting. Remember learners are only writing to 20. See notes for Term 3 for how learners can work with number sequences beyond 20.</p>	<p>3 lessons</p>

GRADE 1 TERM 4			
3. SPACE AND SHAPE (GEOMETRY)			
TOPICS	CONCEPTS AND SKILLS REQUIREMENT BY YEAR END	CONCEPTS AND SKILLS FOCUS FOR TERM 4	SOME CLARIFICATION NOTES OR TEACHING GUIDELINES
3.1 Position, orientation and views	<p>Language of position Describe the position of one object in relation to another e.g. on top of, in front of, behind, left, right, up, down, next to</p> <p>Position and directions</p> <ul style="list-style-type: none"> Follow directions to move around the classroom Follow instructions to place one object in relation to another e.g. put the pencil inside the box <p>Position and views Match different views of the same everyday object</p>	<p>Language of position Describe the position of one object in relation to another e.g. on top of, in front of, behind, left, right, up, down, next to.</p> <p>Position and directions</p> <ul style="list-style-type: none"> Follow directions to move around the classroom Follow instructions to place one object in relation to another e.g. put the pencil inside the box. <p>Position and views Match different views of the same everyday object</p>	<p>Position and directions See notes for Term 1. Any new language of position should be introduced through practical activities that involve learners in physical movement. This can be done during whole class teaching time or focus group time. Directions should be learnt through practical activities in which learners move themselves or objects according to instructions. This can be done during whole class teaching time or focus group time. Work on position and direction can be consolidated through written recording such as drawing, colouring or matching drawings with words. This can be done during independent time.</p> <p>Position and views Learners in the Foundation Phase need to understand that objects look different when one looks at them from different positions. Learners may take for granted that objects such as cars look small when they are far away. As learners work more with books and illustrations in books, they need to understand why something in the foreground is shown larger than something in the background. In focus group time learners can experiment with placing their hand in front of them, to block their view of larger objects that are further away. In Grade 1 learners should be given exercises in which they can match different views (views from the top, views from the side, views from the front) of different everyday objects. This will eventually help learners to interpret drawings of geometric objects done from different perspectives.</p>
			<p>DURATION (in lessons of 1 hour 24 minutes) 1 lesson</p>

Estimation before measuring is important, but can only be done once learners have done some measuring with that unit.</p> <p>Learners need to be taught that in order to compare volumes or capacity the same unit needs to be used. For example if a glass holds 20 teaspoons of water and cup holds 10 tablespoons of water, one cannot say that the glass holds more water.</p> <p>Learners need to measure with a range of informal units, so that they can</p> <ul style="list-style-type: none"> begin to understand that the smaller the unit the more time one will need to use/fill it, e.g. the volume in a bottle could be 20 tablespoons but also 1 cup; and begin to use units which are appropriate to what they are measuring, e.g. measuring a full 2 litre bottle with teaspoons is a waste of time. <p>Recording measurements</p> <p>Although measuring is a practical skill, learners should record their measurements at all times.</p> <p>Measuring capacity as a context for solving problems and calculations</p> <p>During time allocated to Numbers, Operations and Relationships learners can solve problems that use the context of informal measurement of capacity/volume. For example, Gogo uses 2 cups of milk to make a pudding. If she doubles the recipe, how much milk will she need?</p> <p>Take account of the number range appropriate for the term, as well as the range of problems types.</p>	<p>1 lesson</p>

GRADE 1 TERM 4 5. DATA HANDLING				DURATION (in lessons of 1 hour 24 minutes)
TOPICS	CONCEPTS AND SKILLS REQUIREMENT BY YEAR END	CONCEPTS AND SKILLS FOCUS FOR TERM 4	SOME CLARIFICATION NOTES OR TEACHING GUIDELINES	
Working with collections of objects				
5.1 Collect and sort objects	Collect and organise objects Collect and sort everyday physical objects		Sorting collections of objects is no longer a specific focus in the second half of the year. However, it can be given as an occasional activity during independent work time. The recommended focus in Term 4 is on reading and analysing pictographs: see below.	
5.2 Represent sorted collection of objects	Represent sorted collection of objects Draw a picture of collected objects			
5.3 Discuss and report on sorted collection of objects	Discuss and report on sorted collection of objects <ul style="list-style-type: none"> • Give reasons for how the collection was sorted • Answer questions about <ul style="list-style-type: none"> - how the sorting was done (process) - what the sorted collection looks like (product) • Describe the collection and drawing • Explain how the collection was sorted 			

TOPICS	CONCEPTS AND SKILLS REQUIREMENT BY YEAR END	CONCEPTS AND SKILLS FOCUS FOR TERM 4	SOME CLARIFICATION NOTES OR TEACHING GUIDELINES	DURATION (in lessons of 1 hour 24 minutes)
Working with data				
5.4 Collect and organise data	Collect and organise data Collect data about the class or school to answer questions posed by the teacher			
5.5 Represent data	Represent data Represent data in pictograph			
5.6 Analyse and Interpret data	Analyse and interpret data Answer questions about data in pictograph	Analyse data from representations provided.	Once learners have experienced the whole data cycle (recommended in Term 3), they can focus on analysing representations that are given to them. It is recommended that in Term 4 learners analyse (answer questions) on at least 2 pictographs.	2 lessons

3.5.2. Clarification of Grade 2 content

GRADE 2 TERM 1			
1. NUMBERS, OPERATIONS AND RELATIONSHIPS			
TOPICS	CONCEPTS AND SKILLS REQUIREMENT BY YEAR END	CONCEPTS AND SKILLS FOCUS FOR TERM 1	SOME CLARIFICATION NOTES OR TEACHING GUIDELINES
			DURATION (in lessons of 1 hour 24 minutes)
NUMBER CONCEPT DEVELOPMENT: Count with whole numbers			
1.1 Count objects	Counting concrete objects Estimate and count reliably to at least 200 everyday objects. The strategy of grouping is encouraged.	Count reliably to at least 100 everyday objects. Give a reasonable estimate of a number of objects that can be checked by counting.	<p>See notes for Grade 1, Terms 3 and 4</p> <p>Term 1 in Grade 2 is a consolidation of work done in term 4 of Grade 1.</p> <p>Counting in groups</p> <p>The focus in this term is on counting on and counting in groups. Help learners to count large numbers of objects, by encouraging them to group objects in twos, fives and tens.</p> <p>Number cards should be displayed at each collection to show the number of objects counted. The counting in groups will prepare learners for understanding multiples.</p> <p>Learners should be given the opportunity to see that a group of 100 can be composed in different ways, for example:</p> <ul style="list-style-type: none"> • 10 groups of ten; • 100 loose ones; or • 2 groups of 50. <p>Counting on</p> <p>Learners still need the experience of being given a collection of objects and then count on from there.</p> <p>Resources:</p> <p>Careful consideration needs to be given to the kind of apparatus used to encourage learners to count in groups. Suitable types of apparatus include:</p> <ul style="list-style-type: none"> • Structured apparatus, such as a string of counting beads • The abacus to practice counting in groups of ten • Making bundles of 2, bundles of 5 and ten and then counting all with counting sticks or matches • Play money

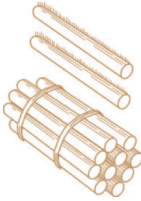

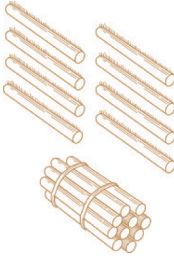

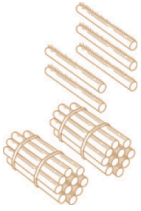

TOPICS	CONCEPTS AND SKILLS REQUIREMENT BY YEAR END	CONCEPTS AND SKILLS FOCUS FOR TERM 1	SOME CLARIFICATION NOTES OR TEACHING GUIDELINES	DURATION (in lessons of 1 hour 24 minutes)
<p>1.1 Count objects</p>	<p>Counting concrete objects Estimate and count reliably to at least 200 everyday objects. The strategy of grouping is encouraged.</p>	<p>Count reliably to at least 100 everyday objects. Give a reasonable estimate of a number of objects that can be checked by counting.</p>	<p>Once learners have seen pre-structured or pre-grouped counting apparatus, encourage them to group objects when counting.</p> <p>Learners need to make the link between ordinal and cardinal counting. This is achieved when they realise that stopping the count on reaching the 50th object means that they have counted 50 objects. By the end of the term learners should be able to:</p> <ul style="list-style-type: none"> • count objects they can touch or hold; • count the counters in groups of fives and tens and • re-arrange them and count again. Learners should be able to answer the question: "Do you still have the same number of counters?" <p>Further activities: Learners should be able to respond to the following kind of instructions and questions:</p> <ul style="list-style-type: none"> • Here are 100 counters. Count them by grouping them in tens. Now check by counting in ones. Before you start, do you think that the total will be the same? • To count all 100 counters, would you prefer to count them in groups of 20 or 25? Why? • Decide what would be the best way to count a collection of pencils. • Here are 80 counters. If we count in twos or tens, will the total number of counters still be the same? • Count 46 counters by grouping them in twos. 	

TOPICS	CONCEPTS AND SKILLS REQUIREMENT BY YEAR END	CONCEPTS AND SKILLS FOCUS FOR TERM 1	SOME CLARIFICATION NOTES OR TEACHING GUIDELINES	DURATION (in lessons of 1 hour 24 minutes)																																																		
<p>1.2 Count forwards and backwards</p>	<p>Count forwards and backwards in:</p> <ul style="list-style-type: none"> • 1s, from any number between 0 and 200 • 10s from any multiple between 0 and 200 • 5s from any multiple of 5 between 0 and 200 • 2s from any multiple of 2 between 0 and 200 • 3s from any multiple of 3 between 0 and 200 • 4s from any multiple of 4 between 0 and 200 	<p>Counts forwards and backwards in:</p> <ul style="list-style-type: none"> • 1s from any number between 0 and 100 • 10s from any multiple of 10 between 0 and 100 • 5s from any multiple of 5 between 0 and 100 • 2s from any multiple of 2 between 0 and 100 	<p>Term 1 in Grade 2 is a consolidation of work done in term in 4 Grade 1. A skip counting remains an important skill that will help learners when calculating. Reciting number sequences remains an important skill needed for counting. Counting should continue to form part of learners' everyday lives and so rhymes, songs and stories should form part of the counting experience.</p> <p>In Grade 1 learners have developed the following concepts related to counting:</p> <ul style="list-style-type: none"> • The concept of conservation • The cardinality principle - naming a collection • Subitising • Matching in a one-to-one correspondence <p>Skip counting</p> <p>Skip counting is another name for counting in groups. It helps to develop an awareness of number patterns. Skip counting encourages learners to count and think in groups, which makes them more efficient. This also helps them develop their estimation skills.</p> <p>Counting in groups makes them aware of the relationships between non-consecutive numbers. It lays the basis for number patterning and for multiplication.</p> <p>Learners should continue to be supported by images to help the skip counting.</p> <p>Example:</p> <table border="1" data-bbox="901 729 1227 1315"> <tbody> <tr><td>2</td><td>4</td><td>6</td><td>8</td><td>10</td></tr> <tr><td>12</td><td>14</td><td>16</td><td>18</td><td>20</td></tr> <tr><td>22</td><td>24</td><td>26</td><td>28</td><td>30</td></tr> <tr><td>32</td><td>34</td><td>36</td><td>38</td><td>40</td></tr> <tr><td>42</td><td>44</td><td>46</td><td>48</td><td>50</td></tr> <tr><td>52</td><td>54</td><td>56</td><td>58</td><td>60</td></tr> <tr><td>62</td><td>64</td><td>66</td><td>68</td><td>70</td></tr> <tr><td>72</td><td>74</td><td>76</td><td>78</td><td>80</td></tr> <tr><td>82</td><td>84</td><td>86</td><td>88</td><td>90</td></tr> <tr><td>92</td><td>94</td><td>96</td><td>98</td><td>100</td></tr> </tbody> </table> <p>Further activities:</p> <p>Counting forwards and backwards to 100 using the large 100 chart: (5 - 7 min per day)</p> <p>Start counting with the WHOLE CLASS together, stop at a certain number e.g. 24. The learners take turns counting on from that number in groups/pairs/individuals as indicated by the teacher, writing the number at each stop.</p> <p>Ask questions such as what pattern do you see? Where does the first pattern stop? (Example: Pattern for counting in 2s: 2; 4; 6; 8; 10)</p>	2	4	6	8	10	12	14	16	18	20	22	24	26	28	30	32	34	36	38	40	42	44	46	48	50	52	54	56	58	60	62	64	66	68	70	72	74	76	78	80	82	84	86	88	90	92	94	96	98	100

TOPICS	CONCEPTS AND SKILLS REQUIREMENT BY YEAR END	CONCEPTS AND SKILLS FOCUS FOR TERM 1	SOME CLARIFICATION NOTES OR TEACHING GUIDELINES	DURATION (in lessons of 1 hour 24 minutes)
<p>1.4 Describe, compare, order numbers</p>	<p>Order and compare numbers to 99</p> <ul style="list-style-type: none"> Order whole numbers up to 99 from smallest to greatest, and greatest to smallest . Compare whole numbers up to 99 using smaller than, greater than, more than, less than and is equal to. <p>Use ordinal numbers to show order, place or position</p> <p>Position objects in a line from first to tenth or first to last e.g. first, second, third ... twentieth.</p>	<p>Order and compare numbers to 25</p> <ul style="list-style-type: none"> Order whole numbers from smallest to greatest, and greatest to smallest . Compare whole numbers using smaller than, greater than, more than, less than and is equal to. <p>Use ordinal numbers to show order, place or position</p> <p>Position objects in a line from first to tenth or first to last e.g. first, second, third ... tenth.</p>	<p>The number range for ordering and comparing matches the calculation number range. This means that in order to calculate to 99, learners' number sense should be well developed to arrive at solutions. If learners can order and compare confidently beyond the requirement then it will only increase their number and operational sense.</p> <p>Learners should continue to use the language of ordering and comparing:</p> <ul style="list-style-type: none"> First, second, third, fourth, fifth, sixth..... How many ... As many as, the same number as... Equal to, more than, less than, fewer than, greater than, smaller than, larger than... First, last, before, after, next, between ... <p>Through ordering and comparing objects and numbers learners have learnt that:</p> <ul style="list-style-type: none"> the cardinal aspect of a number is used to describe the number in a set; the ordinal aspect of a number refers to a number in relation to its position in the set. <p>Example: Colour the third circle yellow.</p> <p>Further activities</p> <ul style="list-style-type: none"> Ordinal Numbers: Discuss the difference between the words 'one' and 'first'; 'two' and 'second' etc. Ask questions such as: 'When would you use the word 'three' and when 'third'? Can we write first, second, third in a shorter way? Divide the class into three to four equal groups. Each learner gets a card on which to write his/her name. The group put their names cards in alphabetical order. Teacher and learners can then ask questions, e.g. who is fourth in your group? 	
<p>1.5 Place value</p>	<p>Recognise the place value of at least two-digit numbers to 99</p> <ul style="list-style-type: none"> Know what each digit represents Decompose two-digit numbers up to 99 into multiples of tens and ones/units Identify and state the value of each digit 	<p>Recognise the place value of at least two-digit numbers to 25</p> <ul style="list-style-type: none"> Know what each digit represents Decompose two-digit numbers into multiples of tens and units/ones Identify and state the value of each digit 	<p>What is different from Grade 1?</p> <p>In Term 1, learners work with a higher number range and continue to:</p> <ul style="list-style-type: none"> count and group to make a group of tens and loose ones; and write $18 = 1 \text{ ten and } 8 \text{ loose ones}$ $13 = 10 \text{ and } 3$. <p>During this term learners have to continue to engage in many experiences to establish ten as a benchmark and a unit. Ten is 1 ten that contains 10 ones. Regular 'ten and one' words (24 is 2 groups of 10 and 4 ones or 2 tens and 4 ones) need to be used regularly to establish a language that symbolises decomposing and composing.</p>	

TOPICS	CONCEPTS AND SKILLS REQUIREMENT BY YEAR END	CONCEPTS AND SKILLS FOCUS FOR TERM 1	SOME CLARIFICATION NOTES OR TEACHING GUIDELINES	DURATION (in lessons of 1 hour 24 minutes)
<p>1.5 Place value</p>	<p>Recognise the place value of at least two-digit numbers to 99</p> <ul style="list-style-type: none"> • Know what each digit represents • Decompose two-digit numbers up to 99 into multiples of tens and ones/units • Identify and state the value of each digit 	<p>Recognise the place value of at least two-digit numbers to 25</p> <ul style="list-style-type: none"> • Know what each digit represents • Decompose two-digit numbers into multiples of tens and units/ones • Identify and state the value of each digit 	<p>Working with concrete apparatus</p> <ul style="list-style-type: none"> • Counting sticks/matches <p>Counting sticks or matches can be grouped to show bundles of tens and loose ones.</p> <p>Example:</p> <div style="display: flex; justify-content: space-around; align-items: center;"> <div style="text-align: center;"> <p>To show 12</p>  </div> <div style="text-align: center;"> <p>To show 18</p>  </div> <div style="text-align: center;"> <p>To show 25</p>  </div> </div> <ul style="list-style-type: none"> • The abacus <p>Learners should continue to manipulate concrete apparatus by grouping to form ten ones and understanding that 10 is one group of ten loose ones.</p> <p>Using an abacus, learners should be able to show:</p> <ul style="list-style-type: none"> - one ten; - one ten and 5 ones; - one ten and 6 ones; - one ten and 7 ones; - one ten and 8 ones; and - one ten and 9 ones. <ul style="list-style-type: none"> • Dienes blocks <p>During this term the resources to teach place value can be widened. Base ten blocks (part of the Dienes blocks) can be introduced to develop the idea of a ten as a single entity and that:</p> <ul style="list-style-type: none"> - 10 ones make 1 ten; - 20 ones make 2 tens; and - 16 ones make 1 ten and 6 loose ones. <p>Although learners still need to count and group in tens, they can also show 18 by placing one base ten block and eight loose blocks to show the number.</p> <p>Learners should also group to show 20.</p>

<p>1.6 Problem-solving techniques</p>	<p>Use the following techniques when solving problem and explain solutions to problems:</p> <ul style="list-style-type: none"> • drawings or concrete apparatus e.g. counters • building up and breaking down of numbers • doubling and halving • number lines 	<p>Use the following techniques when solving problems and explain solutions to problems:</p> <ul style="list-style-type: none"> • drawings or concrete apparatus e.g. counters • building up and breaking down of numbers • doubling and halving • number lines 	<p>Learners are expected to solve the word problems using the following techniques:</p> <ul style="list-style-type: none"> • Building up or breaking down numbers • Doubling and halving • Number lines <p>Drawings or concrete apparatus Learners will continue to draw pictures and use concrete apparatus to solve problems. It is important that the pictures or drawings contain numbers as well as number sentences.</p> <p>Building up and breaking down This is one of the most important techniques in the Foundation Phase. Using this technique allows learners to split (decompose) and recombine numbers to help make calculations easier. They will largely be using this technique in the Intermediate Phase as well.</p> <p>Doubling and halving This technique is quite sophisticated and requires a strong number sense. Learners who are able to choose this a technique are quite flexible in the strategies they use. For example: Word problem: On one day at the clinic 17 children were given flu vaccinations. The next day 16 children were vaccinated. How many children were vaccinated altogether? The problem could be solved by using doubling. A learner might say double 16 plus 1 or double 17 minus 1.</p> <p>Number lines Using number lines in order to help calculate will allow learners a way to record their thinking and to keep track of it. It also allows learners to have a recording image that they can use to explain how they solved the problem. Learners have been using number lines since Grade 1. By now they should be able to construct blank number lines on which they put the starting number and then determine how to get from one to the other. During the term there will be progression in the structuring of the number lines. Example of how learners can use the number line to record calculating techniques: Zonke has 6 fluffy toys. Zia has 6 more than Zonke. How many fluffy toys does Zia have? Learners will construct the following number lines to help them arrive at an answer.</p>  <p>Learners can also break 6 into groups of 2. The number line will then show jumps of 2s from 6.</p>

<p>1.6 Problem-solving techniques</p>	<p>Use the following techniques when solving problem and explain solutions to problems:</p> <ul style="list-style-type: none"> • drawings or concrete apparatus e.g. counters • building up and breaking down of numbers • doubling and halving • number lines 	<p>Use the following techniques when solving problems and explain solutions to problems:</p> <ul style="list-style-type: none"> • drawings or concrete apparatus e.g. counters • building up and breaking down of numbers • doubling and halving • number lines 	<p>Example:</p>  <p>Once learners are confident in counting on from a given number, the number line should start at 6. The way this number line is structured matches the concept of counting on. It is important that learners see number lines starting at different numbers when using it for counting or ordering of numbers. One can break up 6 into groups of 2 and add on from 6</p> <p>Example:</p>  <p>6 can be halved and 2 jumps of 3 are recorded.</p> <p>Example:</p>  <p>Learners should be given lots of opportunity to say how a number can be reached using the number line.</p> <p>One can ask: What are the different jumps we can do to reach 15? In order to jump towards numbers, learners need to know the bonds to 15 or be able to use the number line to arrive at an answer. It is important that learners talk about how 'big' the jump is. Practising this kind of activity prepares learners for working with empty lines.</p> <p>When working with number lines, some learners may need to hold a string of beads above or below the number line to help them count.</p> <p>Allow learners to choose the technique most comfortable for them. However, if learners are using techniques that are not efficient, they need to be guided to use more efficient ones. Learners are practising these strategies. They do not have to be fluent in their use.</p> <p>Note that learners often use different ways of solving a problem that may not be what the teacher expects. For example, a division problem may be solved by repeated subtraction, addition, or multiplication. Learners' methods will change in the course of the year as their understanding of and familiarity with the problem types grow, and as their number concept develops.</p>

3.2 3-D objects	<p>Range of objects Recognise and name 3-D objects in the classroom and in pictures</p> <ul style="list-style-type: none"> ball shapes, (spheres) box shapes (prisms) cylinders <p>Features of objects Describe, sort and compare 3-D objects in terms of:</p> <ul style="list-style-type: none"> size objects that roll objects that slide <p>Focussed activities Observe and build given 3-D objects using concrete materials such as cut-out 2-D shapes, building blocks, recycling material, construction kits, other 3-D geometric objects</p>	<p>Range of objects Recognise and name 3-D objects in the classroom and in pictures</p> <ul style="list-style-type: none"> ball shapes, (spheres) box shapes (prisms) <p>Features of Objects Describe, sort and compare 3-D objects in terms of:</p> <ul style="list-style-type: none"> size objects that roll objects that slide <p>Focussed activities Observe and build given 3-D objects using concrete materials such as cut-out 2-D shapes, building blocks, recycling material, construction kits, other 3-D geometric objects</p>	<p>What is different from Grade 1?</p> <ul style="list-style-type: none"> Cylinders are new to Grade 2 but can be introduced in Term 3. <p>In Term 1, learners can revise and consolidate what they did in Grade 1. Learners can focus on cylinders in Term 3.</p> <p>Most of the work on 3-D objects in Grade 2 should be done with concrete/physical objects. We experience the world in three dimensions, so starting with physical objects helps learners to build on the experience that they bring to school.</p> <p>Many young learners struggle to interpret 3-D geometric objects from pictures. Working with the physical objects helps learners to interpret pictures of the geometric objects later. When you hold a physical object you can turn it around and look at it from all sides. You can see what it looks like from behind and underneath.</p> <p>When you only have a picture, you have to imagine the parts that are not visible in the drawing. This is not always easy for young learners. If learners are only given a definition of an object without seeing it or holding it, it is very difficult to understand the features of an object completely.</p> <p>Building with 3-D objects Learners copy a model of something that you as the teacher provides e.g. a tower, a robot, train, taxi, castle etc. Models or constructions can be made using building blocks, recycling material, construction kits, other 3-D geometric objects, cut-out 2-D shapes. This can be done in independent time. It is important for learners to talk about the models they have made. For example, if a tower is built of boxes or blocks, you can ask learners, "Can you build a tower with only balls?" They should explain their answer.</p> <p>Comparing and describing 3-D objects: size Learners compare the size of similar objects e.g.</p> <ul style="list-style-type: none"> order balls according to size ; and use the language of size to compare objects: "The box is bigger than the ball, because I can put the ball inside the box."
			<p>DURATION (in lessons of 1 hour 24 minutes) 3 lessons</p>

TOPICS	CONCEPTS AND SKILLS REQUIREMENT BY YEAR END	CONCEPTS AND SKILLS FOCUS FOR TERM 1	SOME CLARIFICATION NOTES OR TEACHING GUIDELINES	DURATION (in lessons of 1 hour 24 minutes)
<p>3.2 3-D objects</p>	<p>Range of objects Recognise and name 3-D objects in the classroom and in pictures</p> <ul style="list-style-type: none"> • ball shapes, (spheres) • box shapes (prisms) • cylinders <p>Features of objects Describe, sort and compare 3-D objects in terms of:</p> <ul style="list-style-type: none"> • size • objects that roll • objects that slide <p>Focused activities Observe and build given 3-D objects using concrete materials such as cut-out 2-D shapes, building blocks, recycling material, construction kits, other 3-D geometric objects</p>	<p>Range of objects Recognise and name 3-D objects in the classroom and in pictures</p> <ul style="list-style-type: none"> • ball shapes, (spheres) • box shapes (prisms) <p>Features of Objects Describe, sort and compare 3-D objects in terms of:</p> <ul style="list-style-type: none"> • size • objects that roll • objects that slide <p>Focused activities Observe and build given 3-D objects using concrete materials such as cut-out 2-D shapes, building blocks, recycling material, construction kits, other 3-D geometric objects</p>	<p>Describing 3-D objects: colour Learners talk about the colours of objects and then sort objects according to colour. Identifying and naming objects and their colours, as well as comparing sizes of objects, can be practised during work with patterns.</p> <p>3-D objects in Grade 2 Learners work with</p> <ul style="list-style-type: none"> • balls and objects shaped like balls; and • various boxes and other objects shaped like rectangular prisms or cubes. Learners investigate which of the objects can roll, which slide. <p>Focussing on features of 3-D objects Learners can make a slide or incline by placing a box under one end of a large book. They can then experiment to see whether objects slide or roll. This is a continuation of what they did in Grade 1, but now cylinders are included.</p>  <p>Learners can also investigate whether they can make stacks or towers using only balls, or only boxes.</p> <p>Recognising and naming balls (spheres) and boxes (prisms) Learners should be given a range of objects to work with:</p> <ul style="list-style-type: none"> • shaped like spheres, e.g. balls or different size, marbles, oranges etc.; and • shaped like prisms, such as blocks, bricks, boxes of different sizes, e.g. matchboxes, cereal boxes, tea boxes, toothpaste boxes. <p>Learners can find objects shaped like a ball (sphere), or shaped like a box (prisms) when given a collection of objects. Learners can find or show objects shaped like boxes (prisms) in the classroom. e.g. this brick is shaped like a box or this orange is shaped like a ball.</p>	<p>3 lessons</p>

The language of position can be developed in the Language or Life Skills Lesson time and when learners focus specifically on position. It can be applied or practised when learners work with 3-D objects.</p>	3 lessons

GRADE 2 TERM 1 4. MEASUREMENT		DURATION (in lessons of 1 hour 24 minutes)	
TOPICS	CONCEPTS AND SKILLS REQUIREMENT BY YEAR END	CONCEPTS AND SKILLS FOCUS FOR TERM 1	SOME CLARIFICATION NOTES OR TEACHING GUIDELINES
4.1 Time	<p>Telling the time</p> <ul style="list-style-type: none"> Know days of week Know months of year Place birthdays, religious festivals, public holidays, historical events, school events on a calendar Tell 12-hour time in hours, half hours and quarter hours <p>Calculate length of time and passing of time</p> <p>Use calendars to calculate and describe lengths of time in days or weeks.</p> <p>Use clocks to calculate length of time in hours, half hours or quarter hours.</p>	<p>Telling the time</p> <ul style="list-style-type: none"> Knows days of week Knows months of year Place birthdays, religious festivals, public holidays, historical events, school events on a calendar Tell 12-hour time in hours on analogue clocks 	<p>In Grade 1 learners spoke about</p> <ul style="list-style-type: none"> the sequences of events; and the duration of time. <p>They learned the days of the week and months of the year and used these as well as other language to talk about the sequencing of events from their lives. They spoke about how long things take, using language such as longer or shorter and faster or slower.</p> <p>Learners ordered sequences of pictures such as</p> <ul style="list-style-type: none"> the steps to make a sandwich or a cup of tea; photographs showing a baby grown into an elderly person; life cycle of animals e.g. egg to chicken, or egg to frog or egg to a butterfly; and regular events in the day (waking up, being at school, playing, eating supper, sleeping). <p>They place birthdays on the calendar throughout the year.</p> <p>In Grade 2 learners continue to practise talking about the duration of time and the sequencing of time. During whole class teaching time and focus group time, learners continue to talk about the day of the week, month of the year and the date of the current day, as well as days before and days to come. Learners become familiar with calendars by the continual placing of</p> <ul style="list-style-type: none"> birthdays; religious festivals; historical events; school events; and public holidays <p>on the calendar</p> <p>During independent work time learners continue to sequence events from their daily lives and sequence pictures of events in order.</p>

TOPICS	CONCEPTS AND SKILLS REQUIREMENT BY YEAR END	CONCEPTS AND SKILLS FOCUS FOR TERM 1	SOME CLARIFICATION NOTES OR TEACHING GUIDELINES	DURATION (in lessons of 1 hour 24 minutes)
<p>4.1</p> <p>Time</p>	<p>Telling the time</p> <ul style="list-style-type: none"> Know days of week Know months of year Place birthdays, religious festivals, public holidays, historical events, school events on a calendar Tell 12-hour time in hours, half hours and quarter hours <p>Calculate length of time and passing of time</p> <p>Use calendars to calculate and describe lengths of time in days or weeks.</p> <p>Use clocks to calculate length of time in hours, half hours or quarter hours.</p>	<p>Telling the time</p> <ul style="list-style-type: none"> Knows days of week Knows months of year Place birthdays, religious festivals, public holidays, historical events, school events on a calendar Tell 12-hour time in hours on analogue clocks 	<p>What is different from Grade 1?</p> <p>A focus in Grade 2 is on telling the time, especially reading clocks. In Term 1 learners focus their attention on telling the time in hours, using an analogue clock. However, learners should also tell the time of regular events during the day on a continual basis. For example, learners can be asked to tell the time when school starts, at break time and at home time, or when they change from one lesson to another. Choose times where the clock shows an exact hour. It is useful to have a large working clock displayed in the classroom, so that learners can refer to it. Learners can also make models of clocks. You can then ask them to show various times and include some calculations e.g. Show me 10 o'clock. Show me what the time will be 2 hours after 10.</p>	<p>2 lessons</p>

TOPICS	CONCEPTS AND SKILLS REQUIREMENT BY YEAR END	CONCEPTS AND SKILLS FOCUS FOR TERM 1	SOME CLARIFICATION NOTES OR TEACHING GUIDELINES	DURATION (in lessons of 1 hour 24 minutes)
<p>4.2 Length</p>	<p>Informal measuring</p> <ul style="list-style-type: none"> Estimate, measure, compare, order and record length using non-standard measures e.g. hand spans, paces, pencil lengths, counters etc. Describe the length of objects by counting and stating how many informal units long they are Use language to talk about the comparison e.g. longer, shorter, taller, wider <p>Introducing formal measuring</p> <ul style="list-style-type: none"> Estimate, measure, compare order and record length using metres (either metre sticks or metre lengths of string) as the standard unit of length. 	<p>Informal measuring</p> <ul style="list-style-type: none"> Estimate, measure, compare, order and record length using non-standard measures e.g. hand spans, paces, pencil lengths, counters etc. Describe the length of objects by counting and stating how many informal units long they are Use language to talk about the comparison e.g. longer, shorter, taller, wider <p>Introducing formal measuring</p> <p>Estimate, measure, order and record length using metres (either metre sticks or metre long lengths of string) as the standard unit of length.</p>	<p>What is different from Grade 1?</p> <p>In Grade 1 learners focused on</p> <ul style="list-style-type: none"> placing objects directly next to each to compare lengths, heights and widths; and informal measurement with non-standard units of length. <p>In Term 1 of Grade 2 learners should continue to focus on informal measurement using non-standard units, but can also be introduced to metres as a unit of measurement.</p> <p>Informal measurement of length using non-standard units of length</p> <p>Learners can learn all the principles and practises of measurement using non-standard units. Measuring with non-standard units should not be considered to be inferior to measuring with standard units.</p> <p>Measuring length with non-standard units involves counting how many of the chosen unit are the same length as the object being measured. For example the length of the desk is 8 hand spans.</p> <p>Learners should measure a variety of objects using a range of objects as informal units. There are three ways to use informal units: length, distance and height.</p> <ul style="list-style-type: none"> Pack out in a row across the object being measured, a number of objects of the same length such as matchboxes, identically shaped bottle tops or counters, new pencils etc. For example, to measure the width of a desk, new pencils can be packed out end to end across the desk. <p>Here it is important that</p> <ul style="list-style-type: none"> all the objects are the same length. You cannot state that your book is as wide as 12 bottle tops if the bottle tops are of different sizes e.g. 2 litre milk bottle tops, plastic cool drink bottle tops, metal bottle tops etc no gaps are left between the objects: they need to be packed out so that they touch each other <ul style="list-style-type: none"> Use two identical objects as the non-standard units. Place the one next to the other, and then move the first to the other side of the second. This is done when measuring with hand spans, foot lengths or paces. Use only one object as the non-standard measure, either flipping it over or marking its end point before sliding it along. 	<p>3 lessons</p>

TOPICS	CONCEPTS AND SKILLS REQUIREMENT BY YEAR END	CONCEPTS AND SKILLS FOCUS FOR TERM 1	SOME CLARIFICATION NOTES OR TEACHING GUIDELINES	DURATION (in lessons of 1 hour 24 minutes)
<p>4.2 Length</p>	<p>Informal measuring</p> <ul style="list-style-type: none"> Estimate, measure, compare, order and record length using non-standard measures e.g. hand spans, paces, pencil lengths, counters etc Describe the length of objects by counting and stating how many informal units long they are Use language to talk about the comparison e.g. longer, shorter, taller, wider <p>Introducing formal measuring</p> <ul style="list-style-type: none"> Estimate, measure, compare order and record length using metres (either metre sticks or metre lengths of string) as the standard unit of length. 	<p>Informal measuring</p> <ul style="list-style-type: none"> Estimate, measure, compare, order and record length using non-standard measures e.g. hand spans, paces, pencil lengths, counters etc. Describe the length of objects by counting and stating how many informal units long they are Use language to talk about the comparison e.g. longer, shorter, taller, wider <p>Introducing formal measuring</p> <p>Estimate, measure, order and record length using metres (either metre sticks or metre long lengths of string) as the standard unit of length.</p>	<p>Learners should be taught always to state the unit e.g. the book is 12 bottle tops wide, the classroom is 9 paces long.</p> <p>Once learners have measured with any unit a couple of times, they should estimate about how many of that unit long the object to be measured is. Estimation before measuring is important, but can only be done once learners have done some measuring with that unit.</p> <p>Learners need to be taught that in order to compare lengths, heights or widths the same unit needs to be used. For example, if the width of the doorway measured is 20 hand spans and the width of the desk is 8 pencil lengths, you cannot say whether the doorway is wider than the desk.</p> <p>Learners need to measure with a range of informal units, so that they can</p> <ul style="list-style-type: none"> begin to understand that the smaller the unit, the larger the number of times it will be used, e.g. the width of the classroom could be 20 paces but 48 foot lengths; and begin to use units which are appropriate to what they are measuring, e.g. measuring the width of the classroom with bottle tops is a waste of time. <p>Introducing formal measurement</p> <p>Most of the time spent on measurement in Grade 2 should be on informal measurement. However, you can give learners the opportunity to begin to develop a sense of how long a metre is. This is best done if learners measure with a 1 metre long “instrument” (such as a metre ruler, a stick that is cut to 1 metre long or pieces of string that are 1 metre long). Seeing the 1 metre length helps learners to form an image of how long a metre is. It is possible to measure in metres with a trundle wheel, but the metre length is not as easily seen.</p> <p>Learners can begin by finding things that are exactly 1 metre long. It is useful to have everyday referents as comparisons, e.g. the width of a door and height of a window is often 1 m. This helps learners to use these lengths or widths that they can see to estimate the lengths of other objects they measure.</p> <p>Once learners have some experience of measuring in metres, they should estimate before every measurement</p> <p>Learners can then find things that are either longer or shorter than 1 metre. Finally they can measure a variety of lengths or distances in metres.</p> <p>Recording measurements</p> <p>Although measuring is a practical skill, learners should record their measurements (with both informal units and metres) at all times.</p> <p>Measuring length as a context for solving problems and calculations</p> <p>During time allocated to Numbers, Operations and Relationships learners can solve problems that use the contexts of</p> <ul style="list-style-type: none"> informal measurement of length, e.g. Lebo’s desk is 11 hand spans long. Teacher’s desk is 19 hand spans long. How much longer is the teacher’s desk? measuring lengths in metres <p>Take account of the number range appropriate for the term, as well as the range of problems types appropriate for the term.</p>	<p>3 lessons</p>

5.4 Collect and organise data	<p>Collect and organise data</p> <ul style="list-style-type: none"> Collect data about the class or school to answer questions posed by the teacher 	<p>Collect and organise data</p> <p>Collect data about the class or school to answer questions posed by the teacher</p>	<p>What is different from Grade 1?</p> <ul style="list-style-type: none"> Learners no longer work with collections of objects. Learners continue to work with pictographs - both constructing them as part of the data cycle and analysing pictographs that they are given. <p>The complete data handling cycle</p> <p>In the data handling cycle,</p> <ul style="list-style-type: none"> learners collect information to answer a question. In the Foundation and Intermediate Phase this question is normally provided by the teacher or textbook; learners sort and represent the information in ways which make it easier to analyse. The form of representation that learners in Grade 2 practise is a pictograph; and learners analyse the information in the pictograph by answering questions posed by the teacher. <p>A class pictograph</p> <p>It is recommended that Grade 2 learners work through the complete data cycle to make a class pictograph at least twice in the year (once in Term 1 and once in Term 3). Working together as a class helps learners to be involved in all the stages of the process without getting lost in the detail of any stage, e.g. drawing all the pictures. Making a class graph allows you to focus the learners' attention on the key aspects of data handling and also on what they need to know about the important features of a pictograph.</p> <p>Features of a pictograph that learners need to be taught:</p> <ul style="list-style-type: none"> Where and how to label the graph (graph title) Where and how to label the categories The pictograph needs to have a key which explains what each picture means The pictures or the spaces for pictures need to be the same size How to place the pictures evenly in rows How to read the graph
5.5 Represent data	<p>Represent data</p> <p>Represent data in pictograph</p>	<p>Represent data</p> <p>Represent data in pictograph</p>	
5.6 Analyse and interpret data	<p>Analyse and interpret data</p> <p>Answer questions about data in pictograph</p>	<p>Analyse and Interpret data</p> <p>Answer questions about data in pictograph</p>	

TOPICS	CONCEPTS AND SKILLS REQUIREMENT BY YEAR END	CONCEPTS AND SKILLS FOCUS FOR TERM 1	SOME CLARIFICATION NOTES or TEACHING GUIDELINES	DURATION (in lessons of 1 hour 24 minutes)
			<p>Learners need to know that it is important first to read the graph title, so that they know what the data is about. They also need to read the titles of the horizontal and vertical axes. Learners do not need to know the technical terms used to describe parts of the graph, only that they must read along the “bottom” and “side” to see what the graph is about.</p> <p>We normally read from left to right, but when learners read graphs they need to read from left to right and bottom to top. This needs to be explained to learners. They also need to practise these skills.</p> <p>Choosing a topic and asking questions to collect data</p> <p>In Grade 2 you should pose questions, e.g. “What are our class’s favourite TV programmes?” Teachers in the phase should ensure that different topics are chosen for data collection and analysis in each of the grades.</p> <p>Suitable topics include favourite sports, favourite cool drinks, favourite colours, favourite pass, favourite foods, favourite TV programmes etc.</p> <p>Setting categories to collect information</p> <p>Give learners a range of categories to choose from.</p> <p>Representing data</p> <p>Learners can each get a piece of paper the same size to draw their answer.</p> <p>The drawings are then arranged in rows to make a pictograph. Titles are added to the axes and the graph.</p> <p>Analyse and interpret data</p> <p>Learners answer questions that you pose about the picture graph, e.g.</p> <p>“What TV programme is the most popular in our class?”</p> <p>“What programme is the favourite of the fewest learners in the class?”</p> <p>“Do more learners like of?”</p> <p>“How many more learners prefer to?”</p>	

GRADE 2 TERM 2			
1. NUMBERS, OPERATIONS AND RELATIONSHIPS			
TOPICS	CONCEPTS AND SKILLS REQUIREMENT BY YEAR END	CONCEPTS AND SKILLS FOCUS FOR TERM 2	SOME CLARIFICATION NOTES OR TEACHING GUIDELINES
1.1 Count objects	Counting concrete objects Estimate and count to at least 200 everyday objects reliably. The strategy of grouping is encouraged.	Count to at least 150 everyday objects reliably. Give a reasonable estimate of a number of objects that can be checked by counting.	<p>What is different from Term 1?</p> <p>In Term 2 the number range has increased and learners now count 150 objects. Because this is a large number of objects to count, the focus has to be on counting in groups. This is a skill that learners have been practising since Grade 1 and it is now applied to a higher number range.</p> <p>It is important that by the end of the term learners have seen a collection of 150 objects and they can suggest the most efficient way to count it.</p> <p>Counting objects in this term supports:</p> <ul style="list-style-type: none"> the counting skills necessary for understanding place value; rote counting; the saying of number names; the recognition of number symbols; and the counting skills necessary for calculating. <p>Resources:</p> <p>Careful consideration needs to be given to the kind of apparatus used.</p> <ul style="list-style-type: none"> Structured apparatus, such as a string of counting beads The abacus to practice counting in groups of ten Bundles of 2, bundles of 5 and ten which are then all counted The Dienes blocks, especially the base ten blocks Play money

<p>1.3 Number symbols and number names</p>	<p>Recognise, identify and read numbers</p> <ul style="list-style-type: none"> Recognise, identify and read number symbols 0 - 200. Write number symbols 0 - 200. Recognise, identify and read number names 0 - 100. Write number names 0 - 100. 	<p>Recognise, identify and read numbers</p> <ul style="list-style-type: none"> Recognise, identify and read number symbols 0 - 150. Write number symbols 0 - 150. Recognise, identify and read number names 0 - 50. Write number names 0 - 50. 	<p>What is different from Term 1?</p> <p>Learners continue to read and write number symbols and number names to an increased number range. Learners will be recognising, reading and writing symbols beyond one hundred and write number names to 50.</p> <p>Care should be taken when talking about three-digit numbers, for example one should say “three hundred and twenty-three” rather than “one, two, three”.</p> <p>When writing three-digit numbers between 100 and 110, the digit in the tens position is zero. Some learners find it difficult to write these numbers in symbols when they are given symbols in words. For example, writing 102 might be difficult for some learners. They might write 1002. Place value cards are particularly useful for helping learners to understand how to represent these numbers correctly. Learners should also be given plenty of practice writing these numbers.</p> <p>Examples of written recording:</p> <ul style="list-style-type: none"> Write the number symbols. <table border="1" data-bbox="806 390 897 1320"> <tr> <td>One hundred and thirty-one</td> <td></td> </tr> <tr> <td>One hundred and forty-seven</td> <td></td> </tr> </table> <ul style="list-style-type: none"> Match number names to number symbols Complete number sequence Complete number lines and number tracks 	One hundred and thirty-one		One hundred and forty-seven		
One hundred and thirty-one								
One hundred and forty-seven

<p>1.7 Addition and subtraction</p>	<p>Solve word problems in context and explain own solution to problems involving addition, subtraction with answers up to 99.</p>	<p>Solve word problems in context and explain own solution to problems involving addition, subtraction with answers up to 50.</p>	<p>What is different from Term 1</p> <p>During this term learners continue practising doing word problems and work on using the following techniques when solving problems:</p> <ul style="list-style-type: none"> • Drawings or concrete apparatus e.g. counters • Building up and breaking down of numbers • Doubling and halving • Number lines <p>The focus during this term remains on recording. Learners should be writing down number sentences as a written record for the problem solved. It is important to watch which learners struggle to write a number sentence to deal with particular problems. If learners ask you to show them how to represent a problem with a number sentence after they have solved it, it is a good time to show them.</p> <p>For examples of problems that can be done this term, see Term 2 notes.</p>	
<p>1.8 Repeated addition leading to multiplication</p>	<p>Solve word problems in context and explains own solution to problems using repeated addition or multiplication with answers up to 50.</p>	<p>Solve word problems in context and explains own solution to problems involving multiplication with answers up to 30.</p>	<p>What is different from Term 1</p> <p>The number range for the term has increased to 30.</p> <p>Learners should be encouraged to write number sentences for all the word problems. One can expect learners to use repeated addition number sentences to show the solution. During this term learners should be writing multiplication number sentences for their solutions. They were introduced to the multiplication sign in Term 1 and should use this experience when solving multiplication number problems. Repeated addition and grid/array type problems should show a multiplication number sentence. There will still be learners who will be far more confident in recording their solutions using repeated addition and not multiplication.</p> <p>Examples of problems that can be done this term</p> <p>Repeated addition</p> <ul style="list-style-type: none"> • How many wheels do 8 bicycles have? • How many eyes do 9 children have? <p>Rate</p> <p>Thami drinks 6 glasses of water every day. How many glasses of water does he drink in a week?</p> <p>Grids/ Arrays</p> <p>Mr Khumalo plants 6 rows of cabbage plants. There are 5 plants in a row. How many cabbage plants are there altogether?</p>

<p>1.9 Grouping and sharing leading to division</p>	<p>Solves and explain solutions to practical problems that involve equal sharing and grouping up to 99 with answers that can include remainders.</p>	<p>Solves and explain solutions to practical problems that involve equal sharing and grouping up to 50 with answers that can include remainders.</p>	<p>Examples of problems that can be done this term</p> <p>During this term allow learners to use drawings and concrete apparatus to show their solutions. Number sentences should be used. Learner might use repeated subtraction to show how they arrived at an answer.</p> <p>Array/Grid</p> <p>Mongezi packs out 20 counters into 10 rows. How many counters are in a row?</p> <p>Grouping</p> <p><i>Grouping, discarding the remainder</i></p> <p>Stella sells apples in bags of 6 apples each. She has 40 apples. How many bags of 6 apples each can she make up?</p> <p><i>Grouping, incorporating the remainder in the answer</i></p> <p>Ben wants to take 35 eggs to his grandmother. How many egg boxes that can take 6 eggs each does he need to pack all the eggs?</p> <p>Sharing</p> <p><i>Sharing, discarding the remainder</i></p> <ul style="list-style-type: none"> • Share 45 sweets among 4 friends so that they all get the same number of sweets. • Sue and Greg do a piece of work together. Sue works for 3 hours and Greg works for 1 hour. They get paid R40. How must they share the money? 	
<p>1.10 Sharing leading to fractions</p>	<p>Solve and explain solutions to practical problems that involve equal sharing leading to solutions that include unitary fractions e.g. $\frac{1}{2}$, $\frac{1}{4}$, $\frac{1}{3}$, $\frac{1}{5}$ etc.</p>	<p>Solve and explain solutions to practical problems that involve equal sharing leading to solutions that include unitary fractions e.g. $\frac{1}{2}$, $\frac{1}{4}$, $\frac{1}{3}$, $\frac{1}{5}$ etc.</p>	<p>What is different from Grade 1</p> <p>One of the first goals in the development of fractions should be to help learners construct the idea of fractional parts of the whole - the parts that result when the whole or unit has been partitioned into equally sized portions or fair shares.</p> <p>Learners seem to understand the idea of separating a quantity into two or more parts to be shared fairly among friends. They eventually make connections between the idea of fair shares and fractional parts. Sharing activities are therefore good places to begin the idea of fractions. Our curriculum also introduces the concept of sharing resulting in fractional parts.</p> <p>Sharing activities are generally posed in the form of simple word problems. Initially when learners perform sharing activities (division) they find dividing or sharing leaves left-over pieces. They then share the left-over pieces again. The language of fractions can be introduced verbally. Then one can write out fraction words, e.g. one-half, one-quarter, one-third. When writing about many fractions parts. e.g. 3 halves, 3 quarters, write this as the figure and the word. The expression 3 over 2 or 3 over 4 is meaningless and it is best to leave this symbolism to the Intermediate Phase.</p>	

TOPICS	CONCEPTS AND SKILLS REQUIREMENT BY YEAR END	CONCEPTS AND SKILLS FOCUS FOR TERM 1	SOME CLARIFICATION NOTES or TEACHING GUIDELINES	DURATION (in lessons of 1 hour 24 minutes)
<p>1.10 Sharing leading to fractions</p>	<p>Solve and explain solutions to practical problems that involve equal sharing leading to solutions that include unitary fractions e.g. etc.</p>	<p>Solve and explain solutions to practical problems that involve equal sharing leading to solutions that include unitary fractions e.g. etc.</p>	<p>Sharing</p> <p>In the examples below an equal sharing situation with a remainder that can also be shared is used.</p> <p>Two children share 5 chocolate bars so that each gets the same amount. How much can each child have? Learners will give each child 2 and then halve the remaining chocolate bar</p>  <p>Remainders</p> <p>It is important that learners draw their answers. Initially let learners describe in their own words the 'part' that they have broken up. Expect that when learners cut up the remaining piece. The pieces may be of unequal size. This might not influence how they describe the sharing process. Once learners can share fairly well, fraction names can be given to the parts.</p> <p>Moving from sharing problems with solutions that have remainders to solutions with whole numbers and fractional parts, means that learners are exposed to improper fractions and mixed numbers. Learners are not required to know and use this terminology. For example: 2 and a half piece can be formally written as $2\frac{1}{2}$, which is a mixed number.</p> <p>Sharing tasks and fraction language</p> <p>The discussion of learners' solutions is a good time to introduce the vocabulary of fractional parts. When a chocolate bar has been broken into equal shares, simply say, 'we call these fourths'. The whole biscuit has been cut into four parts. All the parts are the same size. Learners need to be aware of two aspects of fractional parts:</p> <ul style="list-style-type: none"> • The number of parts; and • the equality of the parts. 	

TOPICS	CONCEPTS AND SKILLS REQUIREMENT BY YEAR END	CONCEPTS AND SKILLS FOCUS FOR TERM 1	SOME CLARIFICATION NOTES or TEACHING GUIDELINES	DURATION (in lessons of 1 hour 24 minutes)
<p>1.10 Sharing leading to fractions</p>	<p>Solve and explain solutions to practical problems that involve equal sharing leading to solutions that include unitary fractions e.g. etc.</p>	<p>Solve and explain solutions to practical problems that involve equal sharing leading to solutions that include unitary fractions e.g. etc.</p>	<p>Sharing activities help learners to develop the following concepts:</p> <ul style="list-style-type: none"> When we divide something into 2 equal parts, we call these parts halves. When we divide something into 3 equal parts, we call these parts thirds. When we divide something into 4 equal parts, we call these parts quarters. When we divide something into 5 equal parts, we call these parts fifths. <p>The focus of fraction word problems in this term allows learners to:</p> <ul style="list-style-type: none"> share and group things equally; name fraction parts; find fractions of whole objects; and recognise that a fraction is part of a whole. <p>Examples of problems suitable for Term 2</p> <ul style="list-style-type: none"> Erin, Tawfiq and Thami must share 4 chocolate bars equally. How much chocolate must each child get? Draw a picture to show your answer. Miles, Hannah, Mathew and Ndaweni share 5 fruit bars. How can they share them equally? Draw a picture to show your answer. Serebolo and Jamie share 1 liquorice stick. Jamie says each one must get a half. Is she correct? Draw a picture to show your answer. <p>It is important that when learners draw the solutions they are able to describe how they shared. At the beginning use learners' informal language to describe the fractional parts. Once they are confident and understand the concept of a 'whole and a bit', the fraction name can be introduced. Then one can write out fraction words, e.g. one-half, one quarter, one third. The fraction symbol is not introduced, as the expression 1 over 2 is meaningless and it is best to leave this symbolism to later grades.</p>	
<p>1.11 Money</p>	<ul style="list-style-type: none"> Recognise and identify the South African coins (5c, 10c, 20c, 50c, R1, R2, R5), and bank notes (R10, R20, R50) Solve money problems involving totals and change to R99 and in cents up to 90c 	<ul style="list-style-type: none"> Recognise and identify the South African coins (5c, 10c, 20c, 50c, R1, R2, R5), and bank notes (R10, R20, R50) Solve money problems involving totals and change in cents up to 50c or rands to R50 	<p>What is different from Term 1</p> <p>During this term learners practise recognising money and breaking up money into smaller parts.</p> <p>Examples of problems that can be done this term</p> <ul style="list-style-type: none"> Could you share 50c equally among four children? Explain how. Joe spent 50c on 10c bubblegum sweets. How many bubblegum sweets did he buy? Thenje pays R5 to travel by taxi to school in the morning. She pays with a R20 note. How much change does she receive? How much money will she have left when she returns home by taxi? Zurina's taxi fare is R5,50. How much change does she get from R10? Mia spent R38. She had R50. How much money does she have left?

<p>1.13 Addition and subtraction</p>	<ul style="list-style-type: none"> • Add to 99 • Subtract from 99 • Use appropriate symbols (+, −, =, □) • Practise number bonds to 20 	<ul style="list-style-type: none"> • Add to 50 • Subtract from 50 • Use appropriate symbols (+, −, =, □) • Practise number bonds to 15 	<p>What is different from Term 1?</p> <p>Learners in Grade 2 will continue to use concrete apparatus and other images to help establish number sense and to calculate. The use of these images will become more and more abstract over time. By the end of the year in Grade 3 learners should be calculating up to three-digit numbers without the use of concrete apparatus. Learners in Grade 2 continue to use and refine their own calculating strategies. They need to be supported in making sure that their recording is systematic, so that it can be read by themselves and others. Grade 2s will use a wide variety of recordings and will be more confident in using numbers and symbols as a recording method.</p> <p>Learners should be able to 'think' about the question posed to them and look at the number range of the problem to decide on the best strategy. Through problem-solving learners have started developing their own calculating strategy and their own recording method. In Grade 2 they will refine this. During this term they should become confident in reading their recording methods and explaining how they arrived at the answer.</p> <p>Learners should be able to do the following with addition and subtraction:</p> <p>Although learners are using concrete apparatus and images to support their calculations when it comes to working with numbers, they should be able to calculate on an abstract level.</p> <p>During the term learners need to continue calculating doubling questions in a variety of ways so that they can use near doubling as a calculating strategy.</p> <p>Example:</p> <p>Double 20. Write this as an addition number sentence</p> <p>Copy and complete:</p> <ul style="list-style-type: none"> • $12 + 12 = \square$ • $15 + \square = 30$ • $16 + \square = 32$ • $17 + 17 = \square$ • $36 = 18 + \square$ • $38 = \square + 19$ <p>Possible methods to show addition and subtraction calculations.</p>

4.1 Time	<p>Telling the time</p> <ul style="list-style-type: none"> Know days of week Know months of year Place birthdays, religious festivals, public holidays, historical events, school events on a calendar Tell 12-hour time in hours, half hours and quarter hours <p>Calculate length of time and passing of time</p> <p>Use calendars to calculate and describe lengths of time in days or weeks.</p> <p>Use clocks to calculate length of time in hours, half hours or quarter hours.</p>	<p>Telling the time</p> <ul style="list-style-type: none"> Know days of week Know months of year Place birthdays, religious festivals, public holidays, historical events, school events on a calendar Tell 12-hour time in hours and half hours on analogue clocks <p>Calculate length of time and passing of time</p> <p>Use clocks to calculate length of time in hours or half hours.</p>	<p>Learners continue to practise talking about the duration of time and the sequencing of time.</p> <p>During whole class teaching time and focus group time, learners continue to talk about the day of the week and month of the year and the date of the current day, as well as days before and days to come. Learners become familiar with calendars by the continual placing of</p> <ul style="list-style-type: none"> Birthdays; religious festivals; historical events; school events; and public holidays <p>on the calendar.</p> <p>During Independent work time learners continue to sequence events from their daily lives and sequence pictures of events. Learners also work with exercises related to telling the time in hours.</p> <p>What is different from Term 1?</p> <p>A focus in Term 2 is telling them time in hours and half hours using an analogue clock. This can be the focus of a lesson. It should include talking about the use of a.m. and p.m. with 12-hour time. Telling the time, should then be practised during the term on a continual basis. For example, learners can be asked to tell the time when school starts, at break time and at home time, or when they change from one lesson to another. Choose times where the clock shows an exact hour or a half hour. It is useful to have a large clock displayed in the classroom, so that learners can refer to it. Learners can also make models of clocks. You can then ask them to show various times and include some calculations e.g. "Show me 10 o'clock." "Show me what the time will be half an hour later."</p>

<p>4.3 Mass</p>	<p>Informal measuring</p> <ul style="list-style-type: none"> Estimate, measure, compare, order and record mass using non-standard measures and a balance e.g. blocks, bricks etc Use language to talk about the comparison e.g. light, heavy, lighter, heavier <p>Introducing formal measuring</p> <ul style="list-style-type: none"> Compare, order and record the mass of commercially packaged objects which have their mass stated in kilograms e.g. 2 kilograms of rice and 1 kilogram of flour Measure their own mass in kilograms using a bathroom scale 	<p>Informal measuring</p> <ul style="list-style-type: none"> Estimate, measure, compare, order and record mass using a balance and non-standard measures e.g. blocks, bricks etc Use language to talk about the comparison e.g. light, heavy, lighter, heavier <p>Introducing formal measuring</p> <ul style="list-style-type: none"> Compare, order and record the mass of commercially packaged objects which have their mass stated in kilograms e.g. 2 kilograms of rice and 1 kilogram of flour Where bathroom scales are available, learners can measure their own mass in kilograms using a bathroom scale. The expectation is that learners only read to the nearest whole kilogram. 	<p>What is different in Grade 2?</p> <p>In Grade 1 it was recommended that learners focus on working with a measuring balance to</p> <ul style="list-style-type: none"> directly comparing the mass of objects, ordering and comparing the masses of 3 or more objects, by placing pairs of objects on a balance, until all objects can be sequenced find the mass of objects using informal units of mass <p>Learners also focussed on developing the language to talk about mass. Learners should begin by consolidating what they know about using a balance and informal units to measure mass. Then they can be exposed to mass in kilograms</p> <p>Informal measurement of mass using a balance and non-standard units</p> <p>Learners can learn all the principles and practises of measurement using non-standard units. Measuring with non-standard units should not be considered to be inferior to measuring with standard units.</p> <p>Commercial mass balances can be used. If you don't have a commercial balance, you can make one by attaching a pair of one of the following to a coat hanger: a yoghurt cup, the cut off base of a 2 litre bottle, the cut off bottom of a litre milk or cold drink box (identical containers are attached to either side of the coat hanger).</p> <p>Measuring with mass with non-standard units involves counting how many of the chosen unit have the same mass as the object being measured. For example a ruler has the same mass as 9 blocks.</p> <p>Learners should measure a variety of objects using a range of objects as informal units. Learners should be taught to always state the unit when giving the mass e.g. the book is has the same mass as 34 marbles.</p> <p>Once learners have measured with any unit a couple of times, they should estimate about how many of that unit will have the same mass as the object being measured. Estimation before measuring is important, but can only be done once learners have done some measuring with that unit.</p> <p>Learners need to be taught that in order to compare masses of different objects the same unit needs to be used. For example if a ruler has a mass of 20 blocks and a pair of scissors has the mass of 20 marbles, you cannot say whether they have the same mass or not, or which one is heavier.</p> <p>Recording measurements</p> <p>Although measuring is a practical skill learners should record their measurements at all times.</p>	<p>3 lessons</p>

TOPICS	CONCEPTS AND SKILLS REQUIREMENT BY YEAR END	CONCEPTS AND SKILLS FOCUS FOR TERM 2	SOME CLARIFICATION NOTES OR TEACHING GUIDELINES	DURATION (in lessons of 1 hour 24 minutes)
<p>4.3 Mass</p>	<p>Informal measuring</p> <ul style="list-style-type: none"> Estimate, measure, compare, order and record mass using non-standard measures and a balance e.g. blocks, bricks etc Use language to talk about the comparison e.g. light, heavy, lighter, heavier <p>Introducing formal measuring</p> <ul style="list-style-type: none"> Compare, order and record the mass of commercially packaged objects which have their mass stated in kilograms e.g. 2 kilograms of rice and 1 kilogram of flour Measure their own mass in kilograms using a bathroom scale 	<p>Informal measuring</p> <ul style="list-style-type: none"> Estimate, measure, compare, order and record mass using a balance and non-standard measures e.g. blocks, bricks etc Use language to talk about the comparison e.g. light, heavy, lighter, heavier <p>Introducing formal measuring</p> <ul style="list-style-type: none"> Compare, order and record the mass of commercially packaged objects which have their mass stated in kilograms e.g. 2 kilograms of rice and 1 kilogram of flour Where bathroom scales are available, learners can measure their own mass in kilograms using a bathroom scale. The expectation is that learners only read to the nearest whole kilogram. 	<p>Working with kilograms</p> <p>Learners can begin to be introduced to kilograms by working with groceries that are sold in kilograms, where the number of kilograms is stated on the packaging.</p> <p>For example learners can compare the mass of packages of different substances (such as rice, sugar, mealie meal, flour or washing powder) that are sold in 1 kg amounts. They can place these on a balance to see that although the size of the packages may differ, they have more or less the same mass.</p> <p>Learners can then be given a range of packages of different items to sequence from heaviest to lightest, where they sequence according to the mass stated on the package e.g. 2 kg rice, 1 kg sugar, 5 kg mealie meal, 10 kg samp.</p> <p>Reading bath room scales</p> <p>Where bath room scales are available learners can use these to read their own mass.</p> <p>There are two kinds of mass meters: digital and analogue.</p> <p>Digital scales are easier to read because the mass is written in numbers. If you have a digital bathroom scale check that it states the mass only in whole kilograms. Some scales you can re-set to show only whole kilograms. If you cannot set it to show whole kilograms, teach learners to ignore the parts of kilograms for now.</p> <p>Most analogue bathroom scales have every 10 kg numbered, with a longer line showing the position of 5 kg. The 1kg lines are usually not numbered. This is similar to the way lines and numbers work on a ruler.</p> <p>Let learner start by counting to see that there are 10 spaces before the 10 kg mark, so that each space represents one kilogram, and the longer line represent 5 kg.</p> <p>Learners can read measurement of real bathroom scales as well as pictures of bathroom scales. It is easier to read the mass of a picture of a bathroom scale than off a real scale.</p> <p>Recording measurements</p> <p>Although measuring is a practical skill learners should record their measurements at all times.</p> <p>Measuring mass as a context for solving problems and calculations</p> <p>During time allocated to <i>Numbers, Operations and Relationships</i> learners can solve problems that use the context of</p> <ul style="list-style-type: none"> informal measurement of mass <p>Example: The duster has a mass of 11 marbles. The box of crayons has a mass of 8 marbles. Together they will have a mass of how many marbles?</p> <ul style="list-style-type: none"> measuring mass in kilograms <p>Example: Puleka bought 12 kg of mealie meal, 5 kg of sugar and 2kg of rice. How much did her shopping weigh altogether.</p> <p>Take account of the number range appropriate for the term, as well as the range of problems types appropriate for the term.</p>	<p>3 lessons</p>

TOPICS	CONCEPTS AND SKILLS: REQUIREMENT BY YEAR END	CONCEPTS AND SKILLS: FOCUS FOR TERM 3	SOME CLARIFICATION NOTES OR TEACHING GUIDELINES
3.1 Position, orientation and views	<p>Language of position Describe the position of one object in relation to another e.g. on top of, in front of, behind, left, right, up, down, next to.</p> <p>Position and views Match different views of the same everyday object.</p> <p>Position and directions Follow directions to move around the classroom.</p>	<p>Position and views</p> <ul style="list-style-type: none"> Match different views of the same everyday object <p>Position and directions</p> <ul style="list-style-type: none"> Follow directions to move around the classroom 	<p>Recommended focus for Term 3: Position and views</p> <p>What is different from Grade 1? In Grade 2 learners practise and consolidate what they have learned about matching different views of the same everyday objects.</p> <p>Position and views Learners in the Foundation Phase need to understand that objects look different when you look at them from different positions. Learners may take for granted that objects such as cars look small when they are far away. As learners work more with books and illustrations in books, they need to understand why something in the foreground is show larger than something in the background. In focus group time learners can experiment with placing their hands in front of them, to block their view of larger objects that are further away.</p> <p>In Grade 2 learners should be given exercises in which they can match different views (views from the top, views from the side, views from the front) of different everyday objects.</p> <p>This will eventually help learners to interpret drawings of geometric objects done from different perspectives.</p>
			DURATION (in lessons of 1 hour 24 minutes) 1 lessons

<p>4.4 Capacity/Volume</p>	<p>Informal measuring</p> <ul style="list-style-type: none"> Estimate and measure, compare and order the capacity of containers (i.e. the amount the container can hold if filled) by using non-standard measures e.g. spoons and cups Describe the capacity of the container by counting and stating how many of the informal units it takes to fill the container e.g. the bottle has the capacity of four cups. <p>Introducing formal measuring</p> <ul style="list-style-type: none"> Estimate, measure, compare, order and record the capacity of objects by measuring in litres Compare, order and record the capacity of commercially packaged objects whose capacity is stated in litres e.g. 2 litres of milk, 1 litre of cool drink, 5 litres of paint 	<p>Informal measuring</p> <ul style="list-style-type: none"> Estimate, measure, compare, order and record the capacity of containers (i.e. the amount the container can hold if filled) by using non-standard measures e.g. spoons and cups Describe the capacity of the container by counting and stating how many of the informal units it takes to fill the container e.g. The bottle has the capacity of 4 cups <p>Introducing formal measuring</p> <p>Estimate, measure, compare, order and record the capacity of objects by measuring in litres using</p> <ul style="list-style-type: none"> using bottles with a capacity of 1 litre a measuring jug which has numbered calibration lines in litres Compare, order and record the capacity of commercially packaged objects whose capacity is stated in litres e.g. 2 litres of milk, 1 litre of cool drink, 5 litres of paint 	<p>Learners need to be taught that in order to compare volumes or capacity, the same unit needs to be used. For example, if a glass holds 20 teaspoons of water and a cup holds 10 tablespoons of water, you cannot say that the glass holds more water.</p> <p>Learners need to measure with a range of informal units, so that they can</p> <ul style="list-style-type: none"> begin to understand that the smaller the unit, the more time you will need to use/fill it, e.g. the volume in a bottle could be 20 tablespoonfuls but also 1 cup; begin to use units which are appropriate to what they are measuring, e.g. measuring a full 2 litre bottle with teaspoons is a waste of time. <p>Introducing formal measuring</p> <ul style="list-style-type: none"> Becoming familiar with litres <p>Learners are told that litres are a common standard unit of measuring capacity and volume. They should learn the word and the abbreviation, because on many commercial containers and many measuring jugs the abbreviated form of the word is used.</p> <p>Learners develop a sense of how much a litre is, by filling and pouring from:</p> <ul style="list-style-type: none"> Different-looking 1 litre containers, e.g. cold drink bottles, milk bottles, milk cartons, juice cartons; and measuring jugs which show 1 litre calibration lines. <p>Learners measure in litres using any of the containers mentioned above. They estimate and then measure the capacity of a range of containers such as large yoghurt tubs, ice cream tubs, lunch boxes, large jugs, large bottles, empty paint tins, buckets etc. Items of different capacity should be chosen. Learners describe the capacity as "less than 1 litre, 2 litres, between 1 and 2 litres, 5 litres" etc.</p> <p>Compare, order and record the capacity of commercially packaged objects whose capacity is stated in litres, e.g. 2 litres of milk, 1 litre of cool drink, 5 litres of paint.</p> <p>Recording measurements</p> <p>Although measuring is a practical skill, learners should record their measurements at all times, including all informal and formal measurement.</p> <p>Measuring capacity as a context for solving problems and calculations</p> <p>During time allocated to Numbers, Operations and Relationships learners can solve problems that use the context of</p> <ul style="list-style-type: none"> informal measurement of capacity/volume, e.g. Gogo uses 2 cups of milk to make a pudding. If she doubles the recipe, how much milk will she need? litres <p>Take account of the number range appropriate for the term, as well as the range of problems types.</p>	<p>3 lessons</p>

GRADE 2 TERM 3 5. DATA HANDLING		SOME CLARIFICATION NOTES OR TEACHING GUIDELINES		DURATION (in lessons of 1 hour 24 minutes)
TOPICS	CONCEPTS AND SKILLS REQUIREMENT BY YEAR END	CONCEPTS AND SKILLS SUGGESTED FOCUS FOR TERM 3		
5.4 Collect and organise data	Collect and organise data	Collect and organise data	Organise data It was recommended that learners work through the whole data cycle in Term 1. It is recommended that in Term 3 learners make individual pictographs from data provided in either picture form or tables. Represent data Since learners will be drawing all the pictures that make up the pictograph, it is important to choose topics that have categories that are easy for learners to draw e.g. favourite types of cool drink, since it is fairly easy to draw a simplified can to represent each cool drink; fruit are also fairly easy to draw so favourite fruit is also a possibility. Drawing pictures to show favourite sports, favourite TV programmes etc. may be too difficult for most Grade 2 learners. It is easier for learners to draw graphs if they are given blocked paper. Remind learners about the key features of a pictograph (see Term 1). Analyse and interpret data Learners should answer questions that you ask about the pictograph: See Term 1 for suitable question types.	3 lessons

GRADE 2 TERM 4			
1. NUMBERS, OPERATIONS AND RELATIONSHIPS			
TOPICS	CONCEPTS AND SKILLS REQUIREMENT BY YEAR END	CONCEPTS AND SKILLS FOCUS FOR TERM 4	SOME CLARIFICATION NOTES OR TEACHING GUIDELINES
1.1 Counting objects	Counting concrete objects Estimate and count to at least 200 everyday objects reliably. The strategy of grouping is encouraged.	Counting concrete objects Estimate and count to at least 200 everyday objects reliably. The strategy of grouping is encouraged.	<p>What is different from Term 3?</p> <p>During this term learners count out 200 objects. By the end of this term learners should have seen, touched and moved 200 objects. They should have a sense of the 'muchness' of 200.</p> <p>Continue to focus on grouping objects.</p> <p>By the end of the term they should be able to respond to the following question types and instructions:</p> <ul style="list-style-type: none"> Count the counters in groups of fives, tens. Rearrange and count again. Do you still have the same number of counters? Here are 200 counters. Count them by grouping them in tens. To count all 200 counters, would you prefer to count them in groups of 20 or 25? Why? Decide what would be the best way to count a collection of pencils. Here are 80 counters. If we count in 2s or 10s, will the total number of counters still be the same? Count 46 counters by grouping them in 2s. Is it quicker to count in twos than to count in ones? How many groups of 10 did you count in 120 counters?

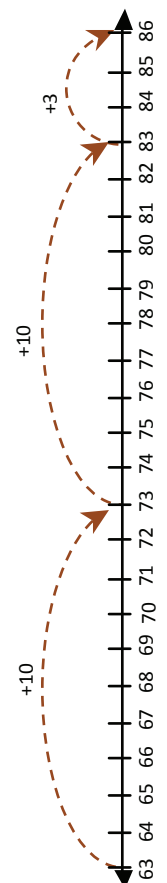

TOPICS	CONCEPTS AND SKILLS REQUIREMENT BY YEAR END	CONCEPTS AND SKILLS FOCUS FOR TERM 4	SOME CLARIFICATION NOTES OR TEACHING GUIDELINES	DURATION (in lessons of 1 hour 24 minutes)
<p>1.2 Count forwards and backwards</p>	<p>Count forwards and backwards in:</p> <ul style="list-style-type: none"> • 1s from any number between 0 and 200 • 10s from any multiple between 0 and 200 • 5s from any multiple of 5 between 0 and 200 • 2s from any multiple of 2 between 0 and 200 • 3s from any multiple of 3 between 0 and 200 • 4s from any multiple of 4 between 0 and 200 	<p>Count forwards and backwards in:</p> <ul style="list-style-type: none"> • 1s from any number between 0 and 200 • 10s from any multiple between 0 and 200 • 5s from any multiple of 5 between 0 and 200 • 2s from any multiple of 2 between 0 and 200 • 3s from any multiple of 3 between 0 and 200 • 4s from any multiple of 4 between 0 and 200 	<p>What is different from Term 3?</p> <p>During this term learners count forwards and backwards to 200. Towards the end of the term learners should consolidate their counting by linking the skip counting to the times tables. Learners should describe what they notice in the times tables and be able to recognise this when doing skip counting. They should begin to apply this skill to predict what numbers would be in the count. Example:</p> <p>Ask learners: When we count in twos, will we use the number 20? Is the number 20 in the 2 times table?</p> <p>By the end of the term they should be able to respond to questions such as:</p> <ul style="list-style-type: none"> • Count in tens from 170 to 200. • Count backwards in tens from 180 to 140. • Count in fives from 115 to 145. • Count backwards in fives from 135 to 110. • Count in threes from 66 to 81. • Count backwards in threes from 190 to 169. • Count in fours from 120 to 140. • Count backwards in fours from 180 to 160. <p>Learners can use number grids, number lines, number tracks, abacus and counting beads to support the counting.</p>

<p>1.6 Problem-solving techniques</p>	<p>Use the following techniques when solving problems and explain solutions to problems:</p> <ul style="list-style-type: none"> • drawings or concrete apparatus e.g. counters • building up and breaking down of numbers • doubling and halving • number lines 		<p>Learners are expected to solve the word problems using the following techniques:</p> <ul style="list-style-type: none"> • Building up or breaking down numbers • Doubling and halving • Number lines <p>See Notes for Terms 1 and 2 for:</p> <ul style="list-style-type: none"> • Drawings or concrete apparatus • Building up and breaking down • Doubling and halving <p>Number lines</p> <p>Using number lines in order to help them calculate will allow learners a way to record their thinking and to keep track of it. It also allows learners to have a recording image that they can use to explain how they solved the problem.</p> <p>Learners have been using number lines since Grade 1. In Term 4 they should be able to construct blank number lines on which they put the starting number and then determine how to get from one to the other.</p> <p>Example of how learners can use the number line:</p> <p>23 children went on an excursion today. There are still 63 children at school. How many children were there to begin with?</p>  <p>The number line starts at 63 and ends at 86. There are tick marks every 1 unit. A dashed arrow starts at 63 and points to 73, labeled '+10'. Another dashed arrow starts at 73 and points to 76, labeled '+3'. A third dashed arrow starts at 76 and points to 86, labeled '+10'.</p> <p>Allow learners to choose the technique most comfortable for them. However if learners are using techniques that are not efficient then they need to be guided to do so.</p> <p>Note that learners often use different ways of solving a problem that may not be what the teacher expects. For example, a division problem may be solved by repeated subtraction, addition, or multiplication. Learners' methods will change in the course of the year as their understanding of and familiarity with the problem types grow, and as their number concept develops.</p>	

TOPICS	CONCEPTS AND SKILLS REQUIREMENT BY YEAR END	CONCEPTS AND SKILLS FOCUS FOR TERM 4	SOME CLARIFICATION NOTES OR TEACHING GUIDELINES	DURATION (in lessons of 1 hour 24 minutes)
<p>1.7 Addition, subtraction</p>	<p>Solve word problems in context and explain own solution to problems involving addition, subtraction with answers up to 99.</p>		<p>Examples of problems that learners should be able to do by the end of the term</p> <p>Addition and subtraction</p> <p>There are at least three basic types of addition and subtraction problems and each type can be posed in different ways. The basic types are:</p> <p>Change</p> <p>Noluthando had 25 sweets. Silo gave her 18 sweets. How many sweets does she have now?</p> <p>Noluthando had 53 sweets. She gave 32 sweets to Silo. How many sweets does she have now?</p> <p>Combine</p> <p>The grade 2 class has 37 green triangles and 19 blue triangles. How many triangles do they have?</p> <p>They have 63 circles; 27 are green and the rest are blue. How many blue circles do they have?</p> <p>Compare</p> <p>Nosisi has 13 bananas. Themba has 5 bananas. How many more bananas does Nosisi have than Themba?</p> <p>Posing each problem in different ways</p> <p>Problems have to be posed in different ways. For example, both of these are change problems, but the “unknowns” are in different places in the problem.</p> <p>Noluthando had some sweets. Silo gave her 18 more sweets. Now she has 43 sweets. How many sweets did Noluthando have in the beginning?</p> <p>Noluthando had 25 apples. Silo gave her some apples. She now has 43 apples. How many apples did Silo give her?</p>

If she doubles the recipe, how much milk will she need? litres <p>Take account of the number range appropriate for the term, as well as the range of problems types.</p>	<p>1 lesson</p>

GRADE 2 TERM 4 5. DATA HANDLING				
TOPICS	CONCEPTS AND SKILLS REQUIREMENT BY YEAR END	CONCEPTS AND SKILLS SUGGESTED FOCUS FOR TERM 4	SOME CLARIFICATION NOTES OR TEACHING GUIDELINES	DURATION (in lessons of 1 hour 24 minutes)
5.4 Collect and organise data	<p>Collect and organise data</p> <ul style="list-style-type: none"> Collect data about the class or school to answer questions posed by the teacher Organise data in tallies 			
5.5 Represent data	<p>Represent data</p> <p>Represent data in pictograph</p>			
5.6 Analyse and interpret data	<p>Analyse and Interpret data</p> <p>Answer questions about data in pictograph</p>	<p>Analyse and Interpret data</p> <p>Analyse data from representations provided</p>	<p>Analyse and Interpret data provided</p> <p>By this stage of the year, learner should be familiar with pictographs. It is recommended that in Term 4 learners focus on analysing data. Give learners data to analyse in at least 1 pictograph</p> <p>Learners should answer questions that you pose to the graph and table: See Term 1 for suitable types of questions</p>	1 lesson

3.5.3 Clarification of Grade 3 content

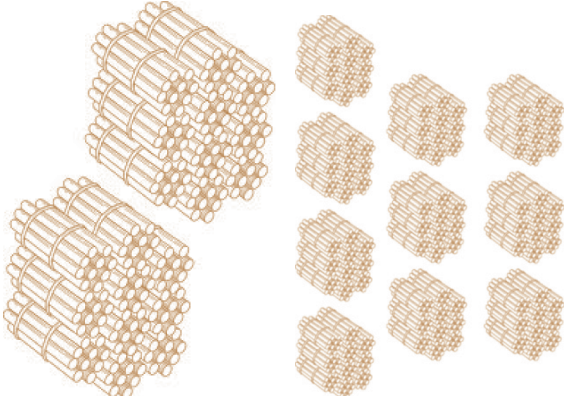

GRADE 3 TERM 1

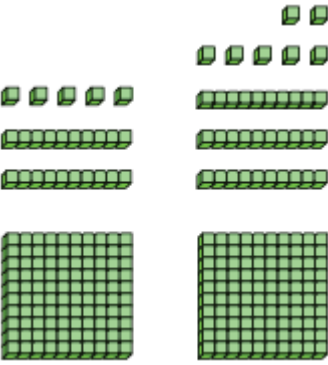

1. NUMBERS, OPERATIONS AND RELATIONSHIPS

Grade 3 learners will now consolidate what they learnt in Grade and use these skills to work with numbers between and

Learners in grade will now

- read and write numbers in symbols and words to
- continue to identify and position numbers;
- use their knowledge of place value to locate the hundreds, tens and ones and to explain their relationship;
- partition three-digit numbers. they will use their knowledge of place value to compare and order numbers and should give reasons for their choice;
- continue counting forwards and backwards, now in intervals of and they will now begin recognising the relationships between counting in s and s;
- know to count large collections of objects by grouping. They now to count systematically, accurately and can give a method on how to check the result;
- add and subtract numbers mentally to ;
- solve different kinds of problems and will learn how to organise their written responses in a systematic way;
- choose the correct operation when doing problem-solving in contexts;
- can record their calculations using the plus (+), minus (-) and equals (=) sign. They can explain their answers and describe their methods;
- work with formal ways to record addition and subtraction calculations, for example they will break up one or two numbers to add and subtract; and
- will be able to choose from a range of strategies to solve the problem. For example to subtract: the learner will know to subtract by counting on or back.
- The curriculum expects that the Grade learners work far less with concrete apparatus to represent addition and subtraction. By the end of the year learners should be able to add and subtract using pencil and paper methods.
- The learner entering Grade should be able to understand the value of numbers and break up the numbers in order to calculate. The learner has begun to understand as ones and as tens and ones. The learner does not need concrete apparatus to help this understanding. In Grade 3 learners will continually need opportunities to practise breaking up numbers in order to understand the value of numbers and to use this knowledge in order to break up numbers to add and subtract.

TOPICS	CONCEPTS AND SKILLS REQUIREMENT BY YEAR END	CONCEPTS AND SKILLS FOCUS FOR TERM 1	SOME CLARIFICATION NOTES OR TEACHING GUIDELINES	DURATION (in lessons of 1 hour 24 minutes)
<p>1.1 Count objects</p>	<p>Counting concrete Objects Estimate and count reliably to at least objects. The strategy of grouping is encouraged.</p>	<ul style="list-style-type: none"> Group to at least objects to estimate and count reliably Give a reasonable estimate of a number of objects that can be checked by counting 	<p>During Grade learners continue to count out everyday objects. The number range will increase to by the end of the year. This means that careful consideration needs to be given to the kind of apparatus used:</p> <ul style="list-style-type: none"> Dienes blocks Place value cards <p>During the first term learners practise and consolidate counting objects to</p> <p>The focus is on grouping the objects. Learners should have a strong sense that it is better, more efficient and quicker to count in groups of tens, twenties, fifties and hundreds than in ones. They start counting in hundreds, forwards and backwards during the first term. To support the rote counting, learners can organise the objects in groups of 100s.</p> <p>Example: Each group shows a hundred.</p> 	

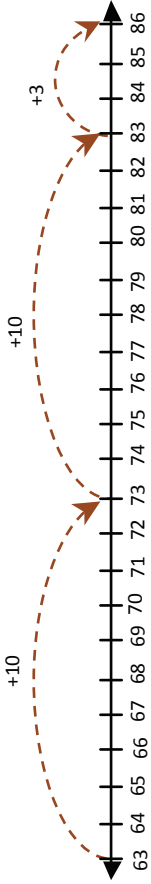

TOPICS	CONCEPTS AND SKILLS REQUIREMENT BY YEAR END	CONCEPTS AND SKILLS FOCUS FOR TERM 4	SOME CLARIFICATION NOTES OR TEACHING GUIDELINES	DURATION (in lessons of 1 hour 24 minutes)
<p>1.1 Count objects</p>	<p>Counting concrete Objects Estimate and count reliably to at least objects. The strategy of grouping is encouraged.</p>	<ul style="list-style-type: none"> Group to at least objects to estimate and count reliably Give a reasonable estimate of a number of objects that can be checked by counting 	<p>During this term and for the rest of the year learners need to be made aware of how the counting of objects will help in calculations.</p> <p>Example: Counting objects by breaking up objects into groups of ten, 20s, 50s or even hundreds will allow learners to break up numbers when adding or subtracting. To add 362 + 527, learners can break up the number into place value parts. i.e.</p> $362 + 527 = (300 + 60 + 2) + (500 + 20 + 7).$ <p>Learners can count the hundreds together because they have done so when counting objects grouped in hundreds. Learners then count the tens (they have done so since Grade 1) and then the ones. Learners need to understand why they are spending their time counting objects. The links need to be made explicit.</p> <p>During this term learners can represent numbers using the Dienes blocks or base ten blocks. Learners used these apparatus in Grade 2.</p>  <p>Learners should be able to complete the following statement: The value of these base blocks are _____</p> <p>Learners can use the place value cards to show the value of each digit.</p> <p>The focus of these kinds of activities is not only on counting objects. At the same time learners are:</p> <ul style="list-style-type: none"> understanding the value of a digit; breaking down and building up numbers; and reading number symbols. 	

TOPICS	CONCEPTS AND SKILLS REQUIREMENT BY YEAR END	CONCEPTS AND SKILLS FOCUS FOR TERM 4	SOME CLARIFICATION NOTES OR TEACHING GUIDELINES	DURATION (in lessons of 1 hour 24 minutes)
<p>1.2 Count forwards and backwards</p>	<p>Count forwards and backwards in:</p> <ul style="list-style-type: none"> the intervals specified in grade 2 with increased number ranges from any given number in 20s, 25s, 50s, 100s to at least 1 000 	<p>Count forwards and backwards in:</p> <ul style="list-style-type: none"> the intervals specified in Grade 2 with increased number ranges 100s to at least 500 	<p>What is different from Grade 2?</p> <p>Learners count in 100s for the first time. They do this to 500. Learners need supporting base ten apparatus such as:</p> <ul style="list-style-type: none"> Counting beads Dienes blocks Number lines Number grids <p>The skip counting needs to be linked to the times tables. Counting in 4s will help learners when they say:</p> <ul style="list-style-type: none"> 1 four is 4 2 fours are 8 3 fours are 12 <p>The skip counting also supports understanding multiplication and will help learners when they complete number sequences.</p>	

TOPICS	CONCEPTS AND SKILLS REQUIREMENT BY YEAR END	CONCEPTS AND SKILLS FOCUS FOR TERM 4	SOME CLARIFICATION NOTES OR TEACHING GUIDELINES	DURATION (in lessons of 1 hour 24 minutes)
<p>1.3 Number symbols and number names</p>	<p>Recognise, identify and read numbers</p> <ul style="list-style-type: none"> Recognise, identify and read number symbols 0 - 1 000 Write number symbols 0 - 1 000 Recognise, identify and read number names 0 - 1 000 Write number names to 0 - 1 000 	<p>Recognise, identify and read numbers</p> <ul style="list-style-type: none"> Recognise, identify and read number symbols 0 - 500 Write number symbols 0 - 500 Recognise, identify and read number names 0 - 250 Write number names 0 - 500 	<p>What is different from Grade 2?</p> <p>During this term learners recognise, read and write number symbols to . They read number names to and write number names to .</p> <p>The reading and writing number symbols is also practised when:</p> <ul style="list-style-type: none"> counting objects; counting forwards and backwards; completing number sequences; and ordering and comparing numbers. <p>Care should be taken to say numbers correctly; one needs to say 323 as “three hundred and twenty-three”, NOT as “323”.</p> <p>When writing three-digit numbers, the numbers between 100 and 110; 200 and 210; 300 and 310, 400 and 410, the digit in the tens position is zero. Some learners find it difficult to write these numbers in symbols when they are given the number in words. For example, it may be difficult for some learners to write ‘three hundred and four’ in symbols. They might write 3004. Place value cards are particularly useful for helping learners to understand how to represent these numbers correctly. Learners should also be given plenty of practice writing these numbers.</p>	
<p>1.4 Describe, compare and order numbers</p>	<p>Describe, compare and order numbers to 999</p> <ul style="list-style-type: none"> Describe and compare whole numbers up to 999 using smaller than, greater than, more than, less than and is equal to Describe and order whole numbers up to 999 from smallest to greatest, and greatest to smallest <p>Use ordinal numbers to show order, place or position</p> <p>Use, read and write ordinal numbers, including abbreviated form up to 31.</p>	<p>Describe, compare and order numbers to 99</p> <ul style="list-style-type: none"> Describe and compare whole numbers up to 99 using smaller than, greater than, more than, less than and is equal to Describe and order whole numbers up to 99 from smallest to greatest, and greatest to smallest <p>Use ordinal numbers to show order, place or position</p> <p>Use, read and write ordinal numbers, including abbreviated form up to 31.</p>	<p>What is different from Grade 2?</p> <p>During this term learners consolidate ordering and comparing numbers to and should be able to give reasons for why one number is bigger than another. Allow learners to use a number line, number track, number grids or even their knowledge of breaking up numbers into tens and ones to illustrate their understanding. When ordering numbers learners must be able to say why a number is bigger than another using the value of the digits to explain themselves.</p> <p>Example: is smaller than because: I know that and, and and . Also is three bundles of ten and is five bundles of ten. There are more bundles of ten in 50 than 30.</p> <p>For working with ordinal numbers the calendar is ideal because it allows the learner to talk about the 23rd or the 31st day of the month. Learners need to practise reading and writing the abbreviated form.</p>	

TOPICS	CONCEPTS AND SKILLS REQUIREMENT BY YEAR END	CONCEPTS AND SKILLS FOCUS FOR TERM 4	SOME CLARIFICATION NOTES OR TEACHING GUIDELINES	DURATION (in lessons of 1 hour 24 minutes)
<p>1.5 Place value</p>	<p>Recognise the place value of three-digit numbers to 999</p> <ul style="list-style-type: none"> Recognise what each digit represents Decompose three-digit numbers up to 999 into multiples of 100, multiple of ten and ones Identify and state the value of each digit 	<p>Recognise the place value of numbers to 99</p> <ul style="list-style-type: none"> Recognise what each digit represents Decompose two-digit numbers up to 99 into multiples of ten and ones Identify and state the value of each digit 	<p>What is different from Grade 2? This term is about consolidating the place value understanding from Grade 2. Learners continue to do similar type activities as in Grade 2, Term 4:</p> <p>Decompose two-digit numbers into multiples of tens and ones Learners can decompose numbers into:</p> <ul style="list-style-type: none"> Multiples of tens and ones e.g. $73 = 70 + 3$ (place value cards are useful to do this) <p>Building up two-digit numbers from their place value parts Example: Write the number:</p> <p>a) 6 tens and 3 ones _____ b) 2 tens and 5 ones _____ c) 12 tens and 8 ones _____ d) 18 tens and 4 ones _____</p> <p>Use apparatus to show the partitioning of numbers:</p> <ul style="list-style-type: none"> Abacus <ol style="list-style-type: none"> Show 4 tens and 5 ones using the abacus. Show 7 tens and 6 ones using the abacus. 	

TOPICS	CONCEPTS AND SKILLS REQUIREMENT BY YEAR END	CONCEPTS AND SKILLS FOCUS FOR TERM 4	SOME CLARIFICATION NOTES OR TEACHING GUIDELINES	DURATION (in lessons of 1 hour 24 minutes)
1.5 Place value	<p>Recognise the place value of three-digit numbers to 999</p> <ul style="list-style-type: none"> Recognise what each digit represents Decompose three-digit numbers up to 999 into multiples of 100, multiple of tens and ones Identify and state the value of each digit 	<p>Recognise the place value of numbers to 99</p> <ul style="list-style-type: none"> Recognise what each digit represents Decompose two-digit numbers up to 99 into multiples of tens and ones Identify and state the value of each digit 	<ul style="list-style-type: none"> Place value cards <p>Learners also use place value cards to show the parts of a number.</p> <p>Example:</p> <p>The following type of questions can be asked:</p> <ul style="list-style-type: none"> Say what the digit 8 in 28 represents? And the 2? Say which number is equivalent or the same as: <ol style="list-style-type: none"> 6 tens Nine tens and three ones Five tens and nine ones 	d)
SOLVE PROBLEMS IN CONTEXT				
1.6 Problem-solving techniques	<p>Use the following techniques when solving problem and explain solutions to problems:</p> <ul style="list-style-type: none"> building up and breaking down numbers doubling and halving number lines rounding off in tens 	<p>Use the following techniques when solving problems:</p> <ul style="list-style-type: none"> building up and breaking down numbers doubling and halving number lines 	<p>What is different from Grade 2?</p> <p>Learners are expected to solve the word problems using the following techniques:</p> <ul style="list-style-type: none"> Building up or breaking down numbers Doubling and halving Number lines <p>Drawing up to 99 objects individually becomes inefficient and should be discouraged. Encourage the inclusion of number symbols in their recordings, including in picture representations. Learners can also be encouraged to write number sentences.</p> <p>Allow learners to choose the technique most comfortable for them. The number range and the type of problem will also determine the technique that is used. However, if learners are using techniques that are not efficient then they need to be guided to use more efficient methods.</p> <p>Building up and breaking down</p> <p>This is one of the most important techniques in the Foundation Phase. Using this technique allows learners to split (decompose) and recombine numbers to help make calculations easier. They will largely be using this technique in the Intermediate Phase as well.</p> <p>Doubling and halving</p> <p>This technique is quite sophisticated and requires a strong number sense. Learners who are able to choose this as a technique are quite flexible in the strategies they use. Knowing how to double will allow learners to use the strategy of near doubles.</p>	

TOPICS	CONCEPTS AND SKILLS REQUIREMENT BY YEAR END	CONCEPTS AND SKILLS FOCUS FOR TERM 4	SOME CLARIFICATION NOTES OR TEACHING GUIDELINES	DURATION (in lessons of 1 hour 24 minutes)
<p>1.6 Problem-solving techniques</p>	<p>Use the following techniques when solving problem and explain solutions to problems:</p> <ul style="list-style-type: none"> • building up and breaking down numbers • doubling and halving • number lines • rounding off in tens 	<p>Use the following techniques when solving problems:</p> <ul style="list-style-type: none"> • building up and breaking down numbers • doubling and halving • number lines 	<p>Example:</p> <p>Word problem: On one day at the clinic 45 children were given flu vaccinations. The next day 46 children were vaccinated. How many children were vaccinated altogether?</p> <p>The problem could be solved by using doubling. A learner might say double 45 plus 1 or double 46 minus 1.</p> <p>Number lines</p> <p>Using number lines in order to help them calculate will give learners a way to record their thinking and to keep track of it. It also allows learners to have a recording image that they can use to explain how they solved the problem.</p> <p>Learners have been using number lines since Grade 1. Learners should be able to construct blank number lines on which they put the starting number and then determine how to get from one to the other.</p> <p>Example of how learners can use the number line:</p> <p>23 children went on an excursion today. There are still 63 children at school. How many children were there to begin with?</p>  <p>The number line starts at 63 and ends at 86. Dashed arrows show a jump of +10 from 63 to 73, and another jump of +3 from 73 to 76. The numbers 63, 64, 65, 66, 67, 68, 69, 70, 71, 72, 73, 74, 75, 76, 77, 78, 79, 80, 81, 82, 83, 84, 85, 86 are marked along the line.</p>	
<p>1.7 Addition and subtraction</p>	<p>Solve word problems in context and explain own solution to problems involving addition, subtraction leading answers up to 999.</p>	<p>Solve word problems in context and explain own solution to problems involving addition, subtraction leading answers up to 99.</p>	<p>Examples of problems that can be done this term</p> <p>In this term, learners consolidate work done in Grade 2. See notes on problem-solving types in Grade 2, Section 2.</p>	

TOPICS	CONCEPTS AND SKILLS REQUIREMENT BY YEAR END	CONCEPTS AND SKILLS FOCUS FOR TERM 4	SOME CLARIFICATION NOTES OR TEACHING GUIDELINES	DURATION (in lessons of 1 hour 24 minutes)
<p>1.8 Repeated addition leading to multiplication</p>	<p>Solve word problems in context and explain own solution to problems using multiplication with answers up to 99.</p>	<p>Solve number problems in context and explain own solution to problems involving multiplication with answers up to 50.</p>	<p>Examples of problems that can be done this term</p> <ul style="list-style-type: none"> • A builder needs to lay 6 rows of paving bricks, with 8 bricks in each row. How many bricks will he need? • Marlene has 4 bags of sweets. Each bag contains 6 sweets. How many sweets are there altogether? • Mom wants to bake 12 cakes. If each cake needs 2 eggs, how many eggs must Mom buy? • If each learner reads 3 books during July, how many books would a class of 20 read? <p>Problem type: Array</p> <ul style="list-style-type: none"> • A vegetable garden has 12 rows of plants. Each row has 7 plants. How many plants are there in the garden? • A vegetable garden has 12 rows of plants. Every row has the same number of plants. If there are a total of 48 plants, how many plants are in each row? • A vegetable garden has 48 plants that are planted in rows. There are 7 plants in each row. How many rows are there? <p>Using doubling to solve problems</p> <ul style="list-style-type: none"> • Justin is 8 years old. • His older brother is twice as old as Justin. • His father is four times as old as Justin. • His grandfather is twice as old as his father. • What are each of their ages? • Shepi's book is 48 pages long. He is on page 26; has he read more than half the book? <p>In Grade 3 learners are expected to recognise a multiplication word sum. Learners should be encouraged to use numbers even with pictures, rather than only using apparatus or pictures on their own.</p>

<p>1.10 Fractions</p>	<p>Solve and explain solutions to practical problems that involve equal sharing leading to solutions that include unitary and non-unitary fractions e.g. $1/2, 1/4, 3/4, 2/5$. etc.</p>	<p>Solve and explain solutions to practical problems that involve equal sharing leading to solutions that include unitary and non-unitary fractions e.g. $1/2, 1/4, 3/4$, etc.</p>	<p>In Grade 2 learners were introduced to fractions and:</p> <ul style="list-style-type: none"> shared and grouped things equally; named fraction parts; identified fractions in different contexts; wrote fraction names as 1 third, 1 fifth; found fractions of whole objects; and found fractions of a collection of objects. <p>What is different from Grade 2?</p> <p>During this term, learners continue to work with unitary fractions such as 1 half, 1 third, 1 quarter, 1 fifth.</p> <p>Learners are also introduced to non-unitary fractions e.g. 3 quarters or 2 thirds.</p> <p>Learners are not required to use the terms <i>unitary</i> and <i>non-unitary</i>.</p> <p>Examples of problems that can be done this term</p> <ul style="list-style-type: none"> Sharing, leading to fractions <p>Share 8 chocolate bars among 3 friends so that they all get the same amount of chocolate bar and there is nothing left over.</p> <ul style="list-style-type: none"> Fraction of a collection <p>a) Find 1 quarter of 16 sweets. b) 8 sweets are which fraction of 24 sweets? c) Grandmother gives Kiki R12. Kiki wants to save a third of the money. How much money must she save? d) This problem type must only be posed after learners have solved four or five problems of the “sharing, leading to fractions” type and know the names of fractional pieces.</p> <p>Writing fractions</p> <p>Learners are not required to write the fraction symbol. Learners have learned how to label fraction parts as 1 fifth, 3 quarters or 3 sixths. This helps them firstly to understand that the fraction names describe how many equal parts the whole has been divided into, for example, halves, thirds, quarters, etc and secondly how many of those parts are being considered, e.g. 2 thirds.</p> <p>Representing fractions word problems</p> <ul style="list-style-type: none"> Learners must draw their answers to prove that they understand the problem. Expect that some learners may draw the fraction correctly but misname the fraction part. Assist these learners to name fractions parts correctly (see notes relating to naming fractions under context-free calculations) Learners must name the parts that have been shared by writing them as 2 thirds.

4.1 Time	<p>Telling the time</p> <ul style="list-style-type: none"> • Read dates on calendars • Place birthdays, religious festivals, public holidays, historical events, school events on a calendar • Tell 12-hour time in <ul style="list-style-type: none"> - hours - half hours - quarter hours - minutes <p>on analogue clocks and digital clocks and other digital instruments that show time e.g. cell phones</p> <p>Calculate length of time and passing of time</p> <p>Use calendars to calculate and describe lengths of time in days or weeks or months including</p> <ul style="list-style-type: none"> • converting between days and weeks • converting between weeks and months <p>Use clocks to calculate length of time in hours or half hours.</p>	<p>Telling the time</p> <ul style="list-style-type: none"> • Read dates on calendars • Place birthdays, religious festivals, public holidays, historical events, school events on a calendar • Tell 12-hour time in <ul style="list-style-type: none"> - hours - half hours - quarter hours - minutes <p>on analogue clocks and digital clocks and other digital instruments that show time e.g. cell phones</p>	<p>What is different from Grade 2?</p> <p>Digital instruments are introduced.</p> <p>In Grade 2 learners read time in hours, half hours and quarter hours on analogue clocks.</p> <p>In Grade 3 learners work with digital instruments for the first time. They still keep to the 12-hour format and use a.m. and p.m. where necessary.</p> <p>Learners continue to practise talking about the duration of time and the sequencing of time.</p> <p>During whole class teaching time and focus group time, learners continue to talk about the day of the week, month of the year and the date of the current day, as well as days before and days to come. Learners continue to place the following on a calendar as the events arise</p> <ul style="list-style-type: none"> • birthdays • religious festivals • historical events • school events • public holidays <p>Continue to ask learners to tell the time in hours, half hours and quarter hours using analogue clocks at regular intervals on an almost daily basis. For example, learners can be asked to tell the time when school starts, at break time and at home time, or when they change from one lesson to another. Choose times where the clock shows an exact hour or half hour or quarter hour. It is useful to have a large, working clock displayed in the classroom, so that learners can refer to it. Learners can also make models of clocks. You can then ask learners to show various times and include some calculations e.g. "Show me 10 o'clock. What was the time a quarter of an hour before 10?"</p> <p>During independent work time learners continue to do exercises related to telling the time in hours, half hours and quarter hours on analogue clocks. Learners can do calculations with weeks or days if provided with a calendar or section of a calendar, e.g. finding dates and calculating the time differences between them.</p>	3 lessons

TOPICS	CONCEPTS AND SKILLS REQUIREMENT BY YEAR END	CONCEPTS AND SKILLS FOCUS FOR TERM 1	SOME CLARIFICATION NOTES OR TEACHING GUIDELINES	DURATION (in lessons of 1 hour 24 minutes)
<p>4.1 Time</p>	<p>Telling the time</p> <ul style="list-style-type: none"> Read dates on calendars Place birthdays, religious festivals, public holidays, historical events, school events on a calendar Tell 12-hour time in <ul style="list-style-type: none"> hours half hours quarter hours minutes <p>on analogue clocks and digital clocks and other digital instruments that show time e.g. cell phones</p> <p>Calculate length of time and passing of time</p> <p>Use calendars to calculate and describe lengths of time in days or weeks or months including</p> <ul style="list-style-type: none"> converting between days and weeks converting between weeks and months <p>Use clocks to calculate length of time in hours or half hours.</p>	<p>Telling the time</p> <ul style="list-style-type: none"> Read dates on calendars Place birthdays, religious festivals, public holidays, historical events, school events on a calendar Tell 12-hour time in <ul style="list-style-type: none"> hours half hours quarter hours minutes <p>on analogue clocks and digital clocks and other digital instruments that show time e.g. cell phones</p>	<p>Digital time</p> <ul style="list-style-type: none"> Time is shown in digital 12 hour format on many domestic appliances e.g. cell phones, microwaves, CD and DVD-players etc. Learners may well be more familiar with this form of time than analogue clocks. Spend about 3 lessons familiarising learners with digital 12-hour time format. Remind learners about the meanings of a.m. and p.m. Show learners which digits refer to hours and which digits refer to minutes in digital time. Explain that there are 60 minutes in an hour; so there are 30 minutes in a half hour and 15 minutes in a quarter of an hour. This will help learners to connect minutes with reading in hours, half hours and quarter hours on analogue clocks, which is what they did in Grade 2. Give learners plenty of practice in reading digital time in 12 hour format. Have a working digital clock on display in the classroom. Ask learners to give the time regularly during the day over the entire year. Let learners make model clocks, which they can use for telling the time and calculating time differences. 	<p>3 lessons</p>

Explain that millilitres are a smaller unit than litres. They should learn the word and the abbreviation, because on many commercial containers and many measuring jugs the abbreviated form of the word is used.</p> <p>Learners should compare, order and record the capacity of commercially packaged objects whose capacity is stated in millilitres, e.g. 500 ml of milk, 750 ml vinegar, 330 ml cold drink, 200 ml cold drink, 400 ml floor polish etc.</p> <p>Learners should measure regularly enough with:</p> <ul style="list-style-type: none"> standard measuring cups to begin to get a sense of how much 250 ml is; measuring teaspoons to begin to get a sense of how much 5 ml is; measuring jugs calibrated in millilitres - here the expectation is that learners only read at the numbered calibration lines - they will focus on reading unnumbered calibration lines in the Intermediate Phase. <p>Following recipes, including baking, is a useful context in which learners can practise measuring.</p> <p>Learners are NOT expected</p> <ul style="list-style-type: none"> to know that 1 000 ml = 1 litre, to do conversions between millilitres and litres, or read unnumbered calibration lines on measuring jugs (this is done from Grade 4). <p>Recording measurements</p> <p>Although measuring is a practical skill, learners should record their measurements at all times, including all informal and formal measurement.</p> <p>Measuring capacity/volume as a context for solving problems and calculations</p> <p>During time allocated to Numbers, Operations and Relationships learners can solve problems that use the context of</p> <ul style="list-style-type: none"> informal measurement of capacity/volume e.g. Gogo uses 2 cups of milk to make a pudding. If she doubles the recipe, how much milk will she need? litres millilitres <p>Take account of the number range appropriate for the term, as well as the range of problems types.</p>	<p>2 lessons</p>

GRADE 3 TERM 1 5. DATA HANDLING				DURATION (in lessons of 1 hour 24 minutes)
SOME CLARIFICATION NOTES OR TEACHING GUIDELINES				
TOPICS	CONCEPTS AND SKILLS REQUIREMENT BY YEAR END	CONCEPTS AND SKILLS FOCUS FOR TERM 1		
5.4 Collect and organise data	<p>Collect and organise data</p> <ul style="list-style-type: none"> Collect data about the class or school to answer questions posed by the teacher Organise data supplied by teacher or book Organise data in <ul style="list-style-type: none"> lists tallies tables 	<p>Collect and organise data</p> <p>Collect data about the class or school to answer questions posed by the teacher.</p> <p>Use tallies to record data in categories provided.</p> <p>Represent data</p> <p>Represent data in</p> <ul style="list-style-type: none"> Table Bar graph <p>Analyse and Interpret data</p> <p>Answer questions about data in bar</p>	<p>What is different from Grade 2?</p> <ul style="list-style-type: none"> Learners organise data into lists, tallies, tables Learners are introduced to bar graphs Learners continue to work with pictographs - both constructing them as part of the data cycle and analysing pictographs that they are given <p>The complete data cycle</p> <p>In the data handling cycle,</p> <ul style="list-style-type: none"> learners collect information to answer a question. In the Foundation and Intermediate Phase this question is normally provided by the teacher or text book; learners sort and represent the information in ways which make it easier to analyse. The form of representation that learners in Grade 3 deal with are lists, tallies, tables, pictographs and bar graphs; and learners analyse the information by answering questions posed by the teacher. <p>A class bar graph</p> <p>It is recommended that Grade 3 learners work through the whole data cycle at least once in the year: Working together as a class helps learners to be involved in all the stages of the process without getting lost in the detail of any stage. Making a class bar graph allows you to focus the learners on the key aspects of data handling and to introduce learners to the key features of a bar graph</p> <ul style="list-style-type: none"> where and how to label the graph (graph title) where and how to label the axes (axes titles) how to draw the bars <ul style="list-style-type: none"> draw the bars the correct length to show the data make the bars the same width leave a space between bars label each bar clearly how to read the graph 	3 lessons
5.5 Represent data	<p>Represent data</p> <p>Represent data in</p> <ul style="list-style-type: none"> pictograph bar graphs 			
5.6 Analyse and interpret data	<p>Analyse and Interpret data</p> <p>Answer questions about data presented in</p> <ul style="list-style-type: none"> pictographs bar graphs 			

TOPICS	CONCEPTS AND SKILLS REQUIREMENT BY YEAR END	CONCEPTS AND SKILLS FOCUS FOR TERM 1	SOME CLARIFICATION NOTES OR TEACHING GUIDELINES	DURATION (in lessons of 1 hour 24 minutes)
<p>5.6 Analyse and interpret data</p>	<p>Analyse and Interpret data Answer questions about data presented in</p> <ul style="list-style-type: none"> • pictographs • bar graphs 		<p>Learners need to know that it is important to read the graph title first, so that they know what the data is about. They also need to read the titles of the horizontal and vertical axes. Learners do not need to know the technical terms used to describe parts of the graph, only that they must read along the “bottom” and “side” to see what the graph is about.</p> <p>We normally read from left to right, but when learners read graphs they need to read left to right and bottom to top. This needs to be explained to learners. They also need to practice these skills.</p> <p>Working through the whole data cycle can take 3 lessons.</p> <p>Collect and organise data</p> <p>In Grade 3 you should pose the questions that allow learners to collect data e.g. “What are our class’s favourite colours?” Teachers in the phase should ensure that different topics are chosen for data collection and analysis in each of the grades.</p> <p>Suitable topics include favourite sports, favourite cool drinks, favourite colours, favourite pass times, favourite foods, favourite TV programmes etc.</p> <p>Learners can start by calling out options. Once you get an idea of the range of answers, you should set categories for learners to choose from. Let learners practise all the “non-graph” forms of representation i.e. lists, tallies and tables e.g.</p> <ul style="list-style-type: none"> - list the names of each learners under the category they have chosen as favourite; - show learners how to make a tally table from the list (teaching learners how to tally can take a whole lesson); and - make a table with numbers from the tally table. <p>Once the data is in a table, show learners how to draw the bar graph (see guidelines above).</p> <p>Analyse and interpret data</p> <p>Learners answer questions that you pose about the picture graph</p> <p>Example:</p> <ol style="list-style-type: none"> a) “What colour is the most popular in our class?” b) “What colour is the favourite of the fewest learners in the class?” c) “Do more learners like or?” d) “How many more learners prefer ... than?” 	

GRADE 3 TERM 2				
1. NUMBERS, OPERATIONS AND RELATIONSHIPS				
TOPICS	CONCEPTS AND SKILLS REQUIREMENT BY YEAR END	CONCEPTS AND SKILLS FOCUS FOR TERM 2	SOME CLARIFICATION NOTES OR TEACHING GUIDELINES	DURATION (in lessons of 1 hour 24 minutes)
1.1 Counting objects	Counting concrete objects Estimate and count reliably to at least 1000 everyday objects. The strategy of grouping is encouraged.	Group to at least 500 everyday objects to estimate and count reliably. Give a reasonable estimate of a number of objects that can be checked by counting	What is different from Term 1? The number range increases to 500. The increase in the number range assumes that learners can: <ul style="list-style-type: none"> • group objects in order to count; • count in tens to 500 and say the number names in sequence; and • match the symbol to the amount counted by writing the number or showing the number with place value cards. See notes for Term 1.	
1.2 Count forwards and backwards	Count forwards and backwards in: <ul style="list-style-type: none"> • 1s from any number between 0 and 1000 • 10s from any multiple between 0 and 1000 • 5s from any multiple of 5 between 0 and 1000 • 2s from any multiple of 2 between 0 and 1000 • 3s from any multiple of 3 between 0 and 1000 • 4s from any multiple of 4 between 0 and 1000 • in 20s, 25s, 50s, 100s to at least 1 000 	<ul style="list-style-type: none"> • 1s from any number between 0 and 500 • 10s from any multiple between 0 and 500 • 5s from any multiple of 5 between 0 and 500 • 2s from any multiple of 2 between 0 and 500 • 3s from any multiple of 3 between 0 and 500 • 4s from any multiple of 4 between 0 and 500 • 50s, 100s to at least 1000 	What is different from Term 1? During this term learners start counting in 50s. The number range now increases to 1 000. During this term learners continue to apply skip counting to the multiplication tables and to number sequences. See notes for Term 1.	

TOPICS	CONCEPTS AND SKILLS REQUIREMENT BY YEAR END	CONCEPTS AND SKILLS FOCUS FOR TERM 2	SOME CLARIFICATION NOTES OR TEACHING GUIDELINES	DURATION (in lessons of 1 hour 24 minutes)
<p>1.3 Number symbols and number names</p>	<ul style="list-style-type: none"> Recognise, identify and read numbers Recognise, identify and read number symbols 0 - 1 000 Write number symbols 0 - 1 000 Recognise, identify and read number names 0 - 1 000 Write number names 0 - 1 000 	<ul style="list-style-type: none"> Recognise, identify and read numbers Recognise, identify and read number symbols 0 - 1 000 Write number symbols 0 - 1 000 Recognise, identify and read number names 0 - 250 Write number names 0 - 250 	<p>The reading and writing number symbols continues to be practised when:</p> <ul style="list-style-type: none"> counting objects; counting forwards and backwards; completing number sequences; and ordering and comparing numbers. <p>See notes for Term 1.</p>	
<p>1.4 Describe, compare and order numbers</p>	<p>Order and compare numbers to 999</p> <ul style="list-style-type: none"> Describe and compare whole numbers up to 999 using smaller than, greater than, more than, fewer than and is equal to. Describe and order whole numbers up to 999 from smallest to greatest, and greatest to smallest. <p>Use ordinal numbers to show order, place or position</p> <ul style="list-style-type: none"> Use, read and write ordinal numbers, including abbreviated form up to 31. 	<p>Order and compare numbers to 500</p> <ul style="list-style-type: none"> Describe and compare whole numbers up to 500 using smaller than, greater than, more than, fewer than and is equal to. Describe and order whole numbers up to 500 from smallest to greatest, and greatest to smallest. <p>Use ordinal numbers to show order, place or position</p> <ul style="list-style-type: none"> Use, read and write ordinal numbers, including abbreviated form up to 31. 	<p>During this term the number range increases from 99 to 500. Learners are now ordering three-digit numbers. To order three-digit numbers, learners need to:</p> <ul style="list-style-type: none"> say the number name; write the number; and recognise the value of each digit. <p>Allow learners to use a number line, number track, number grids or even their knowledge of breaking up numbers into hundreds, tens and ones to illustrate their understanding. When ordering numbers learners must be able to say why a number is bigger than another using the value of the digits to explain themselves.</p> <p>Example: 239 is smaller than 339 because I know that and 30 and 9 and 30 and 9. Learner should be able to explain that 300 is more than 200 by using grouped objects to show the number of 100s in each number. Learners could also locate the position of the number on the line by saying that 339 comes after 239, therefore I know it is bigger.</p>	

TOPICS	CONCEPTS AND SKILLS REQUIREMENT BY YEAR END	CONCEPTS AND SKILLS FOCUS FOR TERM 2	SOME CLARIFICATION NOTES OR TEACHING GUIDELINES	DURATION (in lessons of 1 hour 24 minutes)
<p>1.5 Place value</p>	<p>Recognise the place value of three-digit numbers to 999</p> <ul style="list-style-type: none"> • Know what each digit represents • Decompose 3 digit numbers up to 999 into multiples of 100, multiple of tens and ones • Identify and state the value of each digit 	<p>Recognise the place value of numbers to 500</p> <ul style="list-style-type: none"> • Know what each digit represents • Decompose 3 digit numbers up to 500 into multiples of hundreds, tens and ones . • Identify and state the value of each digit 	<p>What is different from Term 1?</p> <p>During the second term learners decompose three-digit numbers for the first time. The place value system is extended to include hundreds. Learners' understanding of place value can be developed by asking questions such as, find ten more or fewer than a number. As a result of regular experiences in developing place value concepts, learners should be able to count confidently in 100s, discover patterns related to place value and build up and break down two-and three-digit numbers.</p> <p>During this term learners learn to say and write down the value of a digit in the number.</p> <ul style="list-style-type: none"> • In 452 the value of the 5 is fifty. • In 325, the value of the 5 is five. <p>It is important to link the understanding of 50 to 5 bundles of ten and 5 to five loose ones. This will help learners when ordering and comparing numbers.</p> <p>The place value cards (flared Cards) are equally important. Place value cards are used to break up numbers to show the value of each digit.</p> <p>Learners can make their own set of place value cards. An envelope can be pasted at the back of their class workbook and the cards stored in there. The cards can even be used when they are doing addition and can be one way that they use to check their answers.</p> <p>Use their Flard cards to demonstrate this</p> 	<p>c)</p>

<p>1.9 Grouping and sharing leading to division</p>	<p>Solve and explain solutions to practical problems that involve equal sharing and grouping up to 100 with answers that may include remainders.</p>	<p>Solve and explain solutions to practical problems that involve equal sharing and grouping up to 75 with answers that may include remainders.</p>	<p>Examples of problems that can be done this term How many cars are needed to transport 24 learners if four can fit into a car? There are 65 socks in a drawer. How many pairs of socks are there? Grouping David sells bags with ten oranges each. He has 40 oranges. How many bags can he fill? Tony has 66 sweets. Each day he eats 3 sweets. How many days can he eat sweets?</p>	
<p>1.10 Sharing leading to division</p>	<p>Solve and explain solutions to practical problems that involve equal sharing leading to solutions that include unitary and non-unitary fractions e.g. $\frac{1}{2}$, $\frac{1}{4}$, $\frac{1}{5}$, $\frac{3}{4}$, $\frac{2}{3}$, etc.</p>	<p>Solve and explain solutions to practical problems that involve equal sharing leading to solutions that include unitary and non-unitary fractions e.g. $\frac{1}{2}$, $\frac{1}{4}$, $\frac{1}{5}$, $\frac{3}{4}$, etc.</p>	<p>During term 1 learners were introduced to non-unitary fractions e.g. 3 quarters or 2 thirds. Sufficient opportunity should be given to know these fractions. Examples of problems that can be done this term a) Sharing, leading to fractions b) Share 8 chocolate bars among 3 friends so that they all get the same amount of chocolate bar and there is nothing left over c) Fraction of a collection d) Find 1 quarter of 20 sweets. e) 6 sweets are which fraction of 24 sweets f) Grandmother gives Kiki R12. Kiki wants to save a third of the money. How much money must she save? This problem type must only be posed after learners have solved four or five problems of the sharing, leading to fractions type and know the names of fractional pieces. Writing Learners are not required to write the fraction symbol. Learners continue to label fraction parts as 1 fifth, 3 quarters or 3 sixths. Representing fraction word problems Learners must draw their answers to prove that they understand the problem. Expect that some learners may draw correctly but misname the fraction part. Assist these learners to name fractions correctly (see the notes on naming fractions under context-free calculations). Learners must name the parts that have been shared by writing it as 2 thirds.</p>

<p>4.2 Length</p>	<p>Informal measuring</p> <ul style="list-style-type: none"> Estimate, measure, compare, order and record length using non-standard measures e.g. hand spans, paces, pencil lengths, counters etc Describe the length of objects by counting and stating how many informal units long they are Use language to talk about the comparison e.g. longer, shorter, taller, and wider. <p>Introducing formal measuring</p> <ul style="list-style-type: none"> Estimate, measure, compare, order and record length using metres (either metre sticks or metre lengths of string) as the standard unit of length. Estimate and measure lengths in centimetres using a ruler. <p>No conversions between metres and centimetres required</p>	<p>Informal measuring</p> <ul style="list-style-type: none"> Estimate, measure, compare, order and record length using non-standard measures e.g. hand spans, paces, pencil lengths, counters etc Describe the length of objects by counting and stating how many informal units long they are Use language to talk about the comparison e.g. longer, shorter, taller, wider <p>Introducing formal measuring</p> <ul style="list-style-type: none"> Estimate, measure, order and record length using metres (either metre sticks or metre lengths of string) as the standard unit of length. 	<p>What is different from Grade 2?</p> <p>In Grade 2 learners</p> <ul style="list-style-type: none"> focused on informal measurement with non-standard units of length; and were introduced to measuring in metres. <p>In Term 2 of Grade 3 learners can continue to do informal measurement using non-standard units, and measuring in metres.</p> <p>In Term 3 they can begin to measure in centimetres using a ruler.</p> <p>Estimating, measuring, comparing and recording lengths, heights and widths using non-standard units of length</p> <p>Learners can learn all the principles and practices of measurement using non-standard units. Measuring with non-standard units should not be considered to be inferior to measuring with standard units.</p> <p>Measuring length with non-standard units involves counting how many of the chosen unit are the same length as the object being measured. For example, the length of the desk is 8 hand spans.</p> <p>Learners should measure a variety of objects using a range of objects as informal units. There are three ways to use informal units:</p> <ul style="list-style-type: none"> Pack out in a row across the object being measured a number of objects of the same length, such as matchboxes, identically shaped bottle tops or counters, new pencils etc. For example, to measure the width of a desk, new pencils can be packed out end to end across the desk. <p>Here it is important that</p> <ul style="list-style-type: none"> all the objects are the same length. You cannot state that your book is as wide as 12 bottle tops if the bottle tops are of different sizes e.g. 2 litre milk bottle tops, plastic cool drink bottle tops, metal bottle tops etc; and no gaps are left between the objects: they need to be packed out so that they touch each other. 	<p>2 lessons</p>

TOPICS	CONCEPTS AND SKILLS REQUIREMENT BY YEAR END	CONCEPTS AND SKILLS FOCUS FOR TERM 2	SOME CLARIFICATION NOTES OR TEACHING GUIDELINES	DURATION (in lessons of 1 hour 24 minutes)
<p>4.2 Length</p>	<p>Informal measuring</p> <ul style="list-style-type: none"> Estimate, measure, compare, order and record length using non-standard measures e.g. hand spans, paces, pencil lengths, counters etc Describe the length of objects by counting and stating how many informal units long they are Use language to talk about the comparison e.g. longer, shorter, taller, and wider. <p>Introducing formal measuring</p> <ul style="list-style-type: none"> Estimate, measure, compare, order and record length using metres (either metre sticks or metre lengths of string) as the standard unit of length. Estimate and measure lengths in centimetres using a ruler. <p>No conversions between metres and centimetres required</p>	<p>Informal measuring</p> <ul style="list-style-type: none"> Estimate, measure, compare, order and record length using non-standard measures e.g. hand spans, paces, pencil lengths, counters etc Describe the length of objects by counting and stating how many informal units long they are Use language to talk about the comparison e.g. longer, shorter, taller, wider <p>Introducing formal measuring</p> <ul style="list-style-type: none"> Estimate, measure, order and record length using metres (either metre sticks or metre lengths of string) as the standard unit of length. 	<ul style="list-style-type: none"> Use two identical objects as the non-standard units. Place the one next to the other, and then move the first to the other side of the second. This is done when measuring with hand spans, foot lengths or paces. Using only one object as the non-standard measure and either flipping it over or marking its end point before sliding it along. <p>Learners should be taught always to state the unit, e.g. the book is 12 bottle tops wide, the classroom is 38 paces long.</p> <p>Once learners have measured with any unit a couple of times, they should estimate about how many of that unit long the object to be measured is. Estimation before measuring is important, but can only be done once learners have done some measuring with that unit.</p> <p>Learners need to be taught that in order to compare lengths, heights or widths the same unit needs to be used. For example, if the width of the doorway measured is 20 hand spans and the width of the desk is 8 pencil lengths, you cannot say whether the doorway is wider than the desk.</p> <p>Learners need to measure with a range of informal units, so that they can</p> <ul style="list-style-type: none"> begin to understand that the smaller the unit, the larger the number of times it will be used, e.g. the width of the classroom could be 20 paces but 48 foot lengths; and begin to use units which are appropriate to what they are measuring, e.g. measuring the width of the classroom with bottle tops is a waste of time. <p>Estimating, measuring, comparing and recording lengths, heights and widths using metres</p> <p>Learners should consolidate their understanding of the length of 1 metre, and using metre lengths for measuring. This is best done if learner measure with a 1 metre long “instrument” (such as a metre rule; a stick that is cut to 1 metre long or pieces of string that are 1 metre long). Seeing the 1 metre length helps learners to form an image of how long a metre is. It is possible to measure in metres with a trundle wheel, but the metre length is not as easily seen.</p>	<p>2 lessons</p>

It is useful to have everyday referents as comparisons e.g. the width of a door and height of a window are often 1 m. This helps learners to use these lengths or widths that they can see to estimate the lengths of other objects they measure.</p> <p>Learners should estimate before every measurement. Learners can find things that are either longer to shorter than 1 metre. Learners can measure a variety of lengths in metres. Different lengths should be compared.</p> <p>Recording measurements</p> <p>Although measuring is a practical skill, learners should record their measurements (with both informal units and metres) at all times.</p> <p>Measuring length as a context for solving problems and calculations</p> <p>During time allocated to Numbers, Operations and Relationships learners can solve problems that use the contexts of</p> <ul style="list-style-type: none"> informal measurement of length; and measuring lengths in metres. <p>Take account of the number range appropriate for the term, as well as the range of problems types appropriate for the term.</p>	<p>2 lessons</p>

TOPICS	CONCEPTS AND SKILLS REQUIREMENT BY YEAR END	CONCEPTS AND SKILLS FOCUS FOR TERM 2	SOME CLARIFICATION NOTES OR TEACHING GUIDELINES	DURATION (in lessons of 1 hour 24 minutes)
<p>4.3 Mass</p>	<p>Informal measuring</p> <ul style="list-style-type: none"> Estimate, measure, compare, order and record mass using non-standard measures and a measuring balance e.g. blocks, bricks etc Use language to talk about the comparison e.g. light, e.g. light, heavy, lighter, heavier <p>Introducing formal measuring</p> <ul style="list-style-type: none"> Compare, order and record the mass of commercially packaged objects which have their mass stated in kilograms e.g. 2 kilograms of rice and 1 kilogram of flour or in grams, e.g. 500 grams of salt Measure their own mass in kilograms using a bathroom scale No conversions between grams and kilograms required 	<p>Informal measuring</p> <ul style="list-style-type: none"> Estimate, measure, compare, order and record mass using a measuring balance and non-standard measures e.g. blocks, bricks etc Use language to talk about the comparison e.g. light, heavy, lighter, heavier <p>Introducing formal measuring</p> <ul style="list-style-type: none"> Compare, order and record the mass of commercially packaged objects which have their mass stated in kilograms, e.g. 2 kilograms of rice and 1 kilogram of flour or in grams, e.g. 500 grams of salt Where bathroom scales are available, learners can measure their own mass in kilograms using a bathroom scale. The expectation is that learners only read to the nearest numbered graduation line. They describe their mass as almost/nearly/close to/a bit more than/more or less/or exactly the number (of kilograms) they read off the mass meter. Where balancing scales with mass pieces calibrated in grams are available, learners can measure the mass of different objects. <p>No conversions between grams and kilograms required</p>	<p>What is different from Grade 2?</p> <p>In Grade 2 learners focussed on informal measurement with non-standard units of mass. Learners used a measuring balance to do this. They also began to work with kilograms. They ordered everyday products which have their mass stated in kilograms. They read their mass off bathroom scales.</p> <p>Informal measurement of mass using a measuring balance and non-standard units</p> <p>Learners can learn all the principles and practises of measurement using non-standard units. Measuring with non-standard units should not be considered to be inferior to measuring with standard units. Learners should consolidate their measuring skills by doing some informal measuring of mass with non-standard units.</p> <p>Commercial mass balances can be used. If you don't have a commercial balance, you can make one by attaching a pair of one of the following to a coat hanger: a yoghurt cup, the cut-off base of a 2 litre bottle, the cut-off bottom of a litre milk or cold drink box (identical containers are attached to either side of the coat hanger).</p> <p>Measuring with mass with non-standard units involves counting how many of the chosen unit are the same mass as the object being measured. For example, a ruler has the same mass as 9 blocks.</p> <p>Learners should measure a variety of objects using a range of objects as informal units.</p> <p>Learners should be taught always to state the unit when giving the mass, e.g. the book is has the same mass as 34 marbles.</p> <p>Once learners have measured with any unit a couple of times, they should estimate about how many of that unit will have the same mass as the object being measured. Estimation before measuring is important, but can only be done once learners have done some measuring with that unit.</p> <p>Learners need to be taught that in order to compare masses of different objects the same unit needs to be used. For example if a ruler has a mass of 20 blocks and a pair of scissors has a mass of 20 marbles, you cannot say whether they have the same mass or not, or which one is heavier.</p>	<p>3 lessons</p>

TOPICS	CONCEPTS AND SKILLS REQUIREMENT BY YEAR END	CONCEPTS AND SKILLS FOCUS FOR TERM 2	SOME CLARIFICATION NOTES OR TEACHING GUIDELINES	DURATION (in lessons of 1 hour 24 minutes)
<p>4.3 Mass</p>	<p>Informal measuring</p> <ul style="list-style-type: none"> Estimate, measure, compare, order and record mass using non-standard measures and a measuring balance e.g. blocks, bricks etc Use language to talk about the comparison e.g. light, heavy, lighter, heavier <p>Introducing formal measuring</p> <ul style="list-style-type: none"> Compare, order and record the mass of commercially packaged objects which have their mass stated in kilograms e.g. 2 kilograms of rice and 1 kilogram of flour or in grams e.g. 500 grams of salt Measure their own mass in kilograms using a bathroom scale No conversions between grams and kilograms required 	<p>Informal measuring</p> <ul style="list-style-type: none"> Estimate, measure, compare, order and record mass using a measuring balance and non-standard measures e.g. blocks, bricks etc Use language to talk about the comparison e.g. light, heavy, lighter, heavier <p>Introducing formal measuring</p> <ul style="list-style-type: none"> Compare, order and record the mass of commercially packaged objects which have their mass stated in kilograms, e.g. 2 kilograms of rice and 1 kilogram of flour or in grams, e.g. 500 grams of salt Where bathroom scales are available, learners can measure their own mass in kilograms using a bathroom scale. The expectation is that learners only read to the nearest numbered graduation line. They describe their mass as almost/nearly/close to/a bit more than/more or less/or exactly the number (of kilograms) they read off the mass meter. Where balancing scales with mass pieces calibrated in grams are available, learners can measure the mass of different objects. <p>No conversions between grams and kilograms required</p>	<p>Recording measurements</p> <p>Although measuring is a practical skill, learners should record their measurements at all times.</p> <p>Working with kilograms</p> <ul style="list-style-type: none"> ordering products according to mass <p>Learners can work with groceries that are sold in kilograms, where the number of kilograms is stated on the packaging. Learners can compare the mass of packages of different substances (such as rice, sugar, mealie meal, flour or washing powder) that are sold in 1 kg amounts. They can place these on a measuring balance to see that although the size of the packages may differ, they have more or less the same mass.</p> <p>Learners can then be given a range of packages of different items to sequence from heaviest to lightest, where they sequence according to the mass stated on the package e.g. 2 kg rice, 1 kg sugar, 5 kg mealie meal, 10 kg samp.</p> <p>Learners will need to know the abbreviation “kg” for kilograms.</p> <p>Working with grams</p> <ul style="list-style-type: none"> ordering products according to mass <p>Learners can work with groceries that are sold in grams, where the number of grams is stated on the packaging. Learners can compare the mass of packages of different substances (such as cereals, tea, coffee, salt, beans, small packets of sugar, small packets of milk powder, packets of jelly, small packets of rice etc) that are sold in grams.</p> <p>Learners can then be given a range of packages of different items to sequence from heaviest to lightest, where they sequence according to the mass stated on the package e.g. 2 kg rice, 1 kg sugar, 5 kg mealie meal, 10 kg samp.</p> <p>It is important that learners are exposed to small, heavy packages like salt and large light packages like rice crispies or corn flakes. This allows them to understand that bigger items are not always heavier than smaller items, unless the same substance is being compared. You can only be certain that the bigger item has the greater mass if</p> <ul style="list-style-type: none"> the same substance is being compared; and you check the masses on a scale (which is not required in the Foundation Phase). <p>Learners will need to know the abbreviation “g” for grams.</p>	<p>3 lessons</p>

<p>4.3 Mass</p>	<p>Informal measuring</p> <ul style="list-style-type: none"> Estimate, measure, compare, order and record mass using non-standard measures and a measuring balance e.g. blocks, bricks etc Use language to talk about the comparison e.g. light, heavier, lighter, heavier <p>Introducing formal measuring</p> <ul style="list-style-type: none"> Compare, order and record the mass of commercially packaged objects which have their mass stated in kilograms e.g. 2 kilograms of rice and 1 kilogram of flour or in grams e.g. 500 grams of salt Measure their own mass in kilograms using a bathroom scale No conversions between grams and kilograms required 	<p>Informal measuring</p> <ul style="list-style-type: none"> Estimate, measure, compare, order and record mass using a measuring balance and non-standard measures e.g. blocks, bricks etc Use language to talk about the comparison e.g. light, heavy, lighter, heavier <p>Introducing formal measuring</p> <ul style="list-style-type: none"> Compare, order and record the mass of commercially packaged objects which have their mass stated in kilograms, e.g. 2 kilograms of rice and 1 kilogram of flour or in grams, e.g. 500 grams of salt Where bathroom scales are available, learners can measure their own mass in kilograms using a bathroom scale. The expectation is that learners only read to the nearest numbered gradation line. They describe their mass as almost/nearly/close to/a bit more than/more or less/or exactly the number (of kilograms) they read off the mass meter. Where balancing scales with mass pieces calibrated in grams are available, learners can measure the mass of different objects. <p>No conversions between grams and kilograms required</p>	<p>Learners are NOT required to read kitchen scales in grams. This is done in the Intermediate Phase.</p> <p>Reading bathroom scales in kilograms</p> <p>Where bathroom scales are available learners can use these to read their own mass. There are two kinds of mass meters: digital and analogue.</p> <p>Digital scales are easier to read because the mass is written in numbers. If you have a digital bathroom scale, check that it states the mass only in whole kilograms. You can re-set some scales to show only whole kilograms. If you cannot set it to show only whole kilograms, teach learners to ignore the parts of kilograms for now.</p> <p>Most analogue bathroom scales have every 10 kg numbered, with a longer line showing the position of 5 kg. The 1 kg lines are usually not numbered. This is similar to the way lines and numbers work on a ruler.</p> <p>Let learners start by counting to see that there are 10 spaces before the 10 kg mark, so that each space represents 1 kilogram, and the longer line represents 5 kg.</p> <p>Learners can read measurement off real bathroom scales as well as pictures of bathroom scales. It is easier to read the mass off a picture of a bathroom scale than off a real scale.</p> <p>Recording measurements</p> <p>Although measuring is a practical skill, learners should record their measurements at all times.</p> <p>Measuring mass as a context for solving problems and calculations</p> <p>During time allocated to Numbers, Operations and Relationships learners can solve problems that use the context of</p> <ul style="list-style-type: none"> informal measurement of mass; and measuring mass in kilograms. <p>Take account of the number range appropriate for the term, as well as the range of problems types appropriate for the term.</p> <p>Learners are NOT expected</p> <ul style="list-style-type: none"> to know that 1 000 g = 1 kg; or to do conversions between grams and kilograms. <p>Calculations in grams can be chosen so that they do not go over 1 000 g.</p>	<p>3 lessons</p>

TOPICS	CONCEPTS AND SKILLS REQUIREMENT BY YEAR END	SOME CLARIFICATION NOTES OR TEACHING GUIDELINES	DURATION (in lessons of 1 hour 24 minutes)
<p>4.4 Capacity/Volume</p>	<p>Informal measuring</p> <ul style="list-style-type: none"> Estimate and measure, compare and order the capacity of containers (i.e. the amount the container can hold if filled) by using non-standard measures e.g. spoons and cups Describe the capacity of the container by counting and stating how many of the informal units it takes to fill the container e.g. the bottle has the capacity of 4 cups <p>Introducing formal measuring</p> <ul style="list-style-type: none"> Estimate, measure, compare, order and record the capacity of objects by measuring in litres, half litres and quarter litres Compare, order and record the capacity of commercially packaged objects whose capacity is stated in litres e.g. 2 litres of milk, 1 litre of cool drink, 5 litres of paint or in millilitres e.g. 500 ml of milk, 340 millilitres of cool drink, 750 millilitres of oil Know that a standard cup is 250 millilitres Know that a teaspoon is 5 millilitres <p>No conversions between millilitres and litres required</p>	<p>During independent work time learners should continue to Estimate and measure, compare, order and record the capacity of containers or the volume in containers using non-standard measures. Following recipes, including baking, is a useful context in which learners can practise measuring. Choose recipes where ingredients are given in cups, teaspoons or informal units.</p> <ul style="list-style-type: none"> Compare and order the capacity of a range of bottles and grocery items where the volume is stated on the packaging. Use either 1 litre bottles or 1 litre jugs to estimate and measure, compare, order and record the capacity of containers or the volume in containers in litres. <p>See the notes for Term 3.</p> <p>Learners should be given written tasks to consolidate the following, including reading pictures of</p> <ul style="list-style-type: none"> products with their capacity written on them in order to sequence in order; and pictures of jugs where the volume is near to a numbered 1 litre or 2 litre gradation line. <p>The expectation is that learners only read to the nearest numbered gradation line. They describe their volume as almost/nearly/close to/a bit more than/more or less/ exactly the number (of litres) they read off the jug.</p> <p>Measuring capacity as a context for solving problems and calculations</p> <p>During time allocated to Numbers, Operations and Relationships learners can solve problems that use the context of</p> <ul style="list-style-type: none"> informal measurement of capacity/volume; e.g. Gogo uses 2 cups of milk to make a pudding. If she doubles the recipe, how much milk will she need? litres <p>Take account of the number range appropriate for the term, as well as the range of problems types.</p>	

GRADE 3 TERM 2 5. DATA HANDLING			
TOPICS	CONCEPTS AND SKILLS REQUIREMENT BY YEAR END	CONCEPTS AND SKILLS FOCUS FOR TERM 2	SOME CLARIFICATION NOTES OR TEACHING GUIDELINES
			DURATION (in lessons of 1 hour 24 minutes)
5.4 Collect and organise data	Collect and organise data <ul style="list-style-type: none"> • Collect data about the class or school to answer questions posed by the teacher • Organise data supplied by teacher or book Organise data in <ul style="list-style-type: none"> o lists o tallies o tables 		
5.5 Represent data	Represent data <ul style="list-style-type: none"> • Represent data in pictograph • bar graphs 		
5.6 Analyse and interpret data	Analyse and Interpret data <ul style="list-style-type: none"> • Answer questions about data presented in pictographs • bar graphs 	Analyse data from representations provided.	If learners have worked through the whole data cycle in Term 1, then analysing different forms of data representations should be more meaningful. It is recommended that in Term 2 you give learners data to analyse in at least <ul style="list-style-type: none"> • 1 pictograph • table Learners should answer questions that you ask about the graph and table; see Term 1 for suitable types of questions

GRADE 3 TERM 3				
1. NUMBERS, OPERATIONS AND RELATIONSHIPS				
TOPICS	CONCEPTS AND SKILLS REQUIREMENT BY YEAR END	CONCEPTS AND SKILLS SUGGESTED FOCUS FOR TERM 3	SOME CLARIFICATION NOTES OR TEACHING GUIDELINES	DURATION
1.1 Count objects	Counting concrete objects Estimate and counts to at least 1 000 everyday objects reliably. The strategy of grouping is encouraged.	Group to at least 700 everyday objects to estimate and count reliably. Give a reasonable estimate of a number of objects that can be checked by counting.	What is different from Term 2? The number range has increased and learners should be given the opportunity to touch, move and count out 700 objects grouped differently. See the notes for Term 1 and 2	
1.2 Count forwards and backwards	Count forwards and backwards in: <ul style="list-style-type: none"> 1s from any number between 0 and 1000 10s from any multiple between 0 and 1000 5s from any multiple of 5 between 0 and 1000 2s from any multiple of 2 between 0 and 1000 3s from any multiple of 3 between 0 and 1000 4s from any multiple of 4 between 0 and 1000 20s, 25s, 50s, 100s to at least 1 000 	Count forwards and backwards in: <ul style="list-style-type: none"> 1s from any number between 0 and 700 10s from any multiple between 0 and 700 5s from any multiple of 5 between 0 and 700 2s from any multiple of 2 between 0 and 700 3s from any multiple of 3 between 0 and 700 4s from any multiple of 4 between 0 and 700 20s, 25s, 50s, 100s to at least 1000 	What is different from Term 2 The number range increases to 700. See Term 1 and 2 notes	

TOPICS	CONCEPTS AND SKILLS REQUIREMENT BY YEAR END	CONCEPTS AND SKILLS SUGGESTED FOCUS FOR TERM 3	SOME CLARIFICATION NOTES OR TEACHING GUIDELINES	DURATION
<p>1.3 Number symbols and number names</p>	<p>Recognise, identify and read numbers</p> <ul style="list-style-type: none"> Recognise, identify and read number symbols 0 - 1 000 Write number symbols 0 - 1 000 Recognise, identify and read number names 0 - 1 000 Write number names 0 - 1000 	<p>Recognise, identify and read numbers</p> <ul style="list-style-type: none"> Recognise, identify and read number symbols 0 - 1 000 Write number symbols 0 - 1 000 Recognise, identify and read number names 0 - 500 Write number names 0 - 500 	<p>What is different from Term 2 Learners identify, read and write:</p> <ul style="list-style-type: none"> number symbols to 1 000; and number names to 500. <p>See Term 2 notes–</p>	
<p>1.4 Describe, compare and order numbers</p>	<p>Order and compare numbers to 999</p> <ul style="list-style-type: none"> Order whole numbers up to 999 from smallest to greatest, and greatest to smallest Compare whole numbers up to 999 using smaller than, greater than, more than, fewer than and is equal to. <p>Use ordinal numbers to show order, place or position</p> <ul style="list-style-type: none"> Use, read and write ordinal numbers, including abbreviated form up to 31. 	<p>Order and compare numbers to 500</p> <ul style="list-style-type: none"> Order whole numbers up to 500 from smallest to greatest, and greatest to smallest Compare whole numbers up to 500 using smaller than, greater than, more than, fewer than and is equal to. <p>Use ordinal numbers to show order, place or position</p> <ul style="list-style-type: none"> Use, read and write ordinal numbers, including abbreviated form up to 31. 	<p>What is different from Term 2 Learners order and compare numbers to 500 and continue to use the abbreviated form for writing ordinal numbers.. See term 2 notes</p>	

TOPICS	CONCEPTS AND SKILLS REQUIREMENT BY YEAR END	CONCEPTS AND SKILLS SUGGESTED FOCUS FOR TERM 3	SOME CLARIFICATION NOTES OR TEACHING GUIDELINES	DURATION
<p>1.5 Place value</p>	<p>Recognise the place value of three-digit numbers to 999</p> <ul style="list-style-type: none"> Know what each digit represents Decompose three-digit numbers up to 999 into multiples of 100, multiple of tens and ones/unit Identify and state the value of each digit 	<p>Recognise the place value of numbers to 750</p> <ul style="list-style-type: none"> Know what each digit represents Decompose three-digit numbers up to 750 into multiple of hundreds, tens and ones/units Identify and state the value of each digit 	<p>What is different in Term 3</p> <p>The same type of questions and instructions are given in term 3. The number range has increased but learners are still working with three-digit numbers.</p> <p>The focus during this term should continue to be on:</p> <ul style="list-style-type: none"> the value of the number; decomposing numbers into hundreds, tens and ones using place value cards and base ten blocks; and writing the expanded form of numbers. <p>See notes for Term 2.</p>	
NUMBER PROBLEMS				
<p>1.6 Problem-solving techniques</p>	<p>Use the following techniques when solving problem and explain solutions to problems:</p> <ul style="list-style-type: none"> building up and breaking down numbers doubling and halving number lines rounding off in tens 	<p>Use the following techniques when solving problem:</p> <ul style="list-style-type: none"> building up and breaking down numbers doubling and halving number lines rounding off in tens 	<p>Learners are expected to solve the word problems using the following techniques:</p> <ul style="list-style-type: none"> Building up or breaking down numbers Doubling and halving Number lines Rounding off <p>See notes for Term 2.</p>	
<p>1.7 Addition and subtraction</p>	<p>Solve word problems in context and explain own solution to problems involving addition, subtraction leading answers up to 999.</p>	<p>Solve word problems in context and explain own solution to problems involving addition, subtraction leading answers up to 800</p>	<p>Examples of types of problems that can be done this term</p> <ul style="list-style-type: none"> Addition and subtraction problems Pamela has collected 413 bottle tops. If Ken give her 29 bottle tops, he will have the same number as Pamela. <ul style="list-style-type: none"> How many bottle tops will they both have? How many bottle tops did Ken have to begin with? The grade 2s have a collection of 500 marbles. The Grade 3s have 170 fewer marbles than the Grade 2s. How many marbles do the Grade 3s have? Mark and Martha collect 250 stickers. Mark found 160. How many stickers did Martha find?

<p>1.15 Division</p>	<ul style="list-style-type: none"> • Divide numbers to 99 by 2, 3, 4, 5, 10 • Use appropriate symbols (\div, $=$, \square) 	<ul style="list-style-type: none"> • Divide numbers to 99 by 2, 4, 5, 10, 3, • Use appropriate symbols (\div, $=$, \square) 	<p>What is different from Term 2?</p> <p>During this term the number range learners will work with has increased to 99. Working with an increased number range means that learners need to begin to work with appropriate calculation strategies and written recordings to arrive at their answers.</p> <p>Recording strategies</p> <p>During Terms 3 and 4 learners will be practising recording division using numbers and become less dependent on drawings. The recording strategies will not be accessible to learners if they do not understand the operation. In attempting to try a method that they do not understand will result in errors that learners themselves will not have the ability to detect. It is important that learners are able to identify links among multiplication and division. The purpose of the written recordings should also be to develop learners' understanding of number relationships.</p> <p>Using multiplication</p> <p>Learners should be able to use their knowledge of multiplication. They should begin to say: "What do I know about multiplication in order to find the answer?"</p> <p>$96 \div 3 = \square$</p> <p>I know: $10 \times 3 = 30$</p> <p>Then: $96 - 30 = 66$</p> <p>I know $10 \times 3 = 30$</p> <p>Then: $66 - 30 = 36$</p> <p>I know $10 \times 3 = 30$</p> <p>Then: $36 - 30 = 6$</p> <p>$6 \div 3 = 2$</p> <p>In the above method, learners use multiplication and then repeatedly subtract from 96. They then add up how many times they have subtracted: $2 + 10 + 10 + 10 = 32$</p> <p>Breaking up numbers</p> <p>Learners could 'chunk' 96 into numbers that are associated with 3. Once again learners are using and applying their knowledge of multiplication in order to do a division calculation.</p>	

TOPICS	CONCEPTS AND SKILLS REQUIREMENT BY YEAR END	CONCEPTS AND SKILLS SUGGESTED FOCUS FOR TERM 3	SOME CLARIFICATION NOTES OR TEACHING GUIDELINES	DURATION
<p>1.15 Division</p>	<ul style="list-style-type: none"> • Divide numbers to 99 by 2, 3, 4, 5, 10 • Use appropriate symbols (+, =, □) 	<ul style="list-style-type: none"> • Divide numbers to 99 by 2, 4, 5, 10, 3, • Use appropriate symbols(+, =, □) 	<p> $96 \div 3 = \square$ $96 = 30 + 30 + 30 + 6$  </p> <p> 10 groups of 3 10 groups of 3 2 groups of 3 </p> <p> What learners are doing in both examples is using repeated subtraction by 'chunking'. Just as multiplication 'builds' up numbers, division can be seen as 'breaking down' numbers'. In this way the understanding of division is reinforced as the inverse to multiplication. </p> <p> Learners may use repeated subtraction as chunking, and record in it ways that are similar to shown below. </p>  <p> $96 \div 3 = \square$ $96 \div 3 = 32$ </p> <p>Working with remainders</p> <p>Learners will have worked with remainders when doing grouping and sharing word problems. It is important that they are presented with division number sentences (context-free) that allow for remainders. Example:</p> <p>Explain to learners that:</p> <p>If they know that $28 \div 7 = 4$. What would $29 \div 7 = 4$ be? It is expected that learners record their answers in the following way: $29 \div 7 = 4$ remainder 1. We want learners to be able to say which division facts they know; e.g. I know $25 \div 5 = 5$ therefore $26 \div 5 = 5$ remainder 1</p>

GRADE 3 TERM 3 3. SPACE AND SHAPE (GOMETRY)			
TOPICS	CONCEPTS AND SKILLS: REQUIREMENT BY YEAR END	CONCEPTS AND SKILLS: FOCUS FOR TERM 13	SOME CLARIFICATION NOTES OR TEACHING GUIDELINES
3.1 Position, orientation and views	<p>Position and views</p> <ul style="list-style-type: none"> Match different views of the same everyday object Name an everyday object when shown an unusual view of it Read, interpret and draw informal maps, or top views of a collection of objects. Find objects on maps Position and directions Follow directions to move around the classroom, and school Give directions to move around the classroom and school Follow directions from one place to another on an informal map 	<p>Position and views</p> <ul style="list-style-type: none"> Read, interpret and draw informal maps or top views of a collection of objects Find objects on maps <p>Position and directions</p> <p>Follow directions from one place to another on an informal map</p>	<p>What is new to Grade 3</p> <ul style="list-style-type: none"> Maps, plans and top views of collections of objects <ul style="list-style-type: none"> finding objects on maps following directions on maps drawing informal maps, plans or top views of collections of objects <p>Reading, interpreting maps</p> <p>Maps are a stylised top view of an area. In Grade 3 learners only work with informal maps; this does not include standard road maps or standard geographical maps. It can help learners to start with plans or top views of smaller areas e.g. a tray of objects or a plan of the classroom. before looking at maps of bigger areas.</p> <p>In Term 2 deal with matched top views, side views and front views. An oblique view is a view partly from above and partly from the side. Young children see an oblique view of the world more often than a top view. It can help learners to start by matching oblique views of areas with maps of the same areas. When two views (the oblique and the top view) are provided, learners can match what they see in the one view with the other.</p> <p>First help learners start to understand maps and plans, then ask them to find objects on a plan or places on the map. e.g. "Find the clinic; what is next to it?"</p> <p>Once learners can easily find individual places on a map, start to give them directions from one place on the map to the next.</p> <p>Drawing top views of collections of objects and informal maps</p> <p>It is easier for learners to draw a top view of something they can look down on, than it is for them to draw a map from memory or their imagination. A starting place for drawing top views is to let learners look down on a collection of objects e.g. the objects on the teacher's desk, or a tray of objects placed on the ground, and ask learners to draw it from above. Learners can then move on to drawing informal plans and maps of small areas e.g. the classroom, the school grounds.</p>

<p>1.7 Addition, subtraction</p>	<p>Solve word problems in context and explain own solution to problems involving addition, subtraction leading answers up to 999.</p>		<p>By the end of the term learners should be able to do the following type problems.</p> <p>Addition and subtraction</p> <p>There are at least three basic types of addition and subtraction problems and each type can be posed in different ways. The basic types are:</p> <p>Change</p> <p>Noluthando collected 234 stickers. Silo gave her 80 more stickers. How many stickers does she have now?</p> <p>500 passengers on a train. 176 passengers got off. How many passengers were left on the train?</p> <p>Combine</p> <p>Nosisi collects items for the schools recycling projects. She collected 124 plastic bottles and 268 tin cans. How many items has she collected? The shop has 368 packets of chips; 82 are chippos and the rest are ziksnacks. How many packets or Ziksnacks are there?</p> <p>Compare</p> <p>Grade 2 collected R446. Grade 3 collected R729. How much more money did the Grade 3s collect?</p> <p>Posing each problem in different ways</p> <p>Problems have to be posed in different ways. For example, both of these are change problems, but the “unknowns” are in different places in the problem.</p> <p>The shop had packets of mealie meal; 55 more were ordered. Now there are 170 packets of mealie meal. How many packets were there in the beginning?</p> <p>The shop had 500 packets of sugar. After selling some packets, they had 324 packets of sugar left. How many packets did they sell?</p>	

TOPICS	CONCEPTS AND SKILLS REQUIREMENT BY YEAR END	CONCEPTS AND SKILLS FOCUS FOR TERM 4	SOME CLARIFICATION NOTES OR TEACHING GUIDELINES	DURATION (in lessons of 1 hour 24 minutes)																
<p>1.8 Repeated addition leading to multiplication</p>	<p>Solve word problems in context and explain own solution to problems using multiplication with answers up to 99.</p>		<p>Examples of problems that can be done this term</p> <p>Repeated addition How many wheels do 36 cars have?</p> <p>Rate Thami saves 35c every week. How much money does he save in 8 weeks?</p> <p>Grids Mr Khumalo plants 20 rows of orange trees. There are 12 trees in a row. How many trees are there altogether?</p> <p>Problem situations with different functional relationships Heila sells hotdogs at R4 each. Make a table to help her find the amount for large orders.</p> <table border="1" data-bbox="690 409 794 1320"> <tr> <td>Number of hotdogs</td> <td>1</td> <td>2</td> <td>3</td> <td>4</td> <td>5</td> <td>10</td> <td>20</td> </tr> <tr> <td>Cost in R</td> <td>4</td> <td>8</td> <td></td> <td></td> <td></td> <td></td> <td></td> </tr> </table> <p>Use the table to find the cost of seven hotdogs and 23 hotdogs. Sedick charges R20 for travel costs, and then R5 per hour for babysitting. Complete this table for him.</p>	Number of hotdogs	1	2	3	4	5	10	20	Cost in R	4	8						
Number of hotdogs	1	2	3	4	5	10	20													
Cost in R	4	8																		
<p>1.9 Grouping and sharing leading to division</p>	<p>Solve and explain solutions to practical problems that involve equal sharing and grouping up to 200 with answers that may include remainders.</p>		<p>Examples of problems that can be done this term</p> <p>Grouping Grouping, discarding the remainder A bakery sells bread rolls in bags of 12. They have 118 rolls. How many bags of 12 rolls each can they make up?</p> <p>Grouping, incorporating the remainder in the answer A farmer has 227 eggs. How many egg boxes that can take 6 eggs each does he need to pack all the eggs?</p> <p>Sharing Sharing, discarding the remainder Five friends share 84 sweets so that they all get the same number of sweets. How many sweets does each get?</p>																	

TOPICS	CONCEPTS AND SKILLS REQUIREMENT BY YEAR END	CONCEPTS AND SKILLS FOCUS FOR TERM 4	SOME CLARIFICATION NOTES OR TEACHING GUIDELINES	DURATION (in lessons of 1 hour 24 minutes)
<p>1.10 Sharing leading to fractions</p>	<p>Solve and explain solutions to practical problems that involve equal sharing leading to solutions that include unitary and non-unitary fractions $\frac{1}{2}$, $\frac{1}{4}$, $\frac{3}{4}$, $\frac{2}{5}$ e.g. etc.</p>		<p>Examples of problems that can be done this term</p> <p>Sharing, leading to fractions</p> <p>Share 15 chocolate bars among 6 friends so that they all get the same amount of chocolate bar and there is nothing left over.</p> <p>Share 7 chocolate bars among 3 friends so that they all get the same amount of chocolate bar and there is nothing left over.</p> <p>Fraction of a collection</p> <p>Grandmother gives Kiki R12. Kiki wants to save a third of the money. How much money must she save?</p> <p>This problem type must only be posed after learners have solved four or five problems of the sharing, leading to fractions type and know the names of fractional pieces.</p> <p>Putting fractions together</p> <p>The netball coach gives half an orange to each player. There are 14 players. How many oranges does she need?</p> <p>This problem type must only be posed after learners have solved four or five problems of the sharing, leading to fractions type and know the names of fractional pieces.</p> <p>Writing fractions</p> <p>Learners are not required to write the fraction symbol. Learners learn how to label fraction parts as $\frac{1}{5}$, $\frac{3}{4}$, $\frac{2}{5}$ or $\frac{3}{6}$. This helps them firstly to understand that the fraction names describe how many equal parts the whole has been divided into, for example, halves, thirds, quarters, etc. and secondly how many of those parts are being considered, e.g. 2 thirds.</p> <p>Representing fraction word problems</p> <p>Learners must draw their answers to prove that they understand the problem.</p> <p>Expect that some learners may draw correctly but misname the fraction part.</p> <p>Learners must name the parts that have been shared by writing it as 2 thirds.</p>

5.4 Collect and organise data	Collect and organise data <ul style="list-style-type: none"> • Collect data about the class or school to answer questions posed by the teacher • Organise data supplied by teacher or book • Organise data in <ul style="list-style-type: none"> - lists - tallies - tables 			
5.5 Represent data	Represent data <ul style="list-style-type: none"> • Represent data in <ul style="list-style-type: none"> • pictograph • bar graphs 			
5.6 Analyse and interpret data	Analyse and Interpret data <ul style="list-style-type: none"> • Answer questions about data presented in <ul style="list-style-type: none"> • pictographs • bar graphs 	Analyse data from representations provided.	By this stage of the year, learner should have been exposed to all forms of data required in Grade 3 (lists, tallies, tables, pictographs, bar graphs). It is recommended that in Term 4 learners focus on analysing data. You give learners data to analyse in at least <ul style="list-style-type: none"> • one bar graph; and • one table. Learners should answer questions that you ask about the graph and table; see Term 1 for suitable types of questions.	1 lesson

SECTION 4: ASSESSMENT

4.1 INTRODUCTION

Assessment is a continuous planned process of identifying, gathering and interpreting information about the performance of learners, using various forms of assessment. It involves four steps:

- generating and collecting evidence of achievement;
- evaluating this evidence;
- recording the findings and
- using this information to understand and thereby assist the learner's development in order to improve the process of learning and teaching.

Assessment should be both informal (Assessment for Learning) and formal (Assessment of Learning). In both cases regular feedback should be provided to learners to enhance the learning experience.

In the Foundation Phase, the main techniques of **formal** and **informal** assessment are observation by the teacher, oral discussions, practical demonstrations and written recording. Grade R assessment should be mainly oral and practical.

4.2 INFORMAL OR DAILY ASSESSMENT

Assessment for learning is the process of continuously collecting information on a learner's achievement. This is also called informal assessment. It is a daily monitoring of learners' progress. This is done through observations, discussions, practical demonstrations, informal classroom interactions, etc. It should not be seen as separate from learning activities taking place in the classroom. Informal assessment enables the teacher to monitor learner's progress and to make daily instructional decisions. Informal assessment is used:

- to provide feedback to the learners
- to inform planning for teaching

At times the teacher may keep a checklist or use an observation schedule as a way of recording learners' progress. At times learners or the teacher may mark an exercise. However, informal assessment does not become part of the learners' formal record. The results of informal daily assessment tasks are not taken into account for promotion and certification purposes.

4.3 FORMAL ASSESSMENT

All assessment tasks that make up a formal programme of assessment for the year are regarded as Formal Assessment. Formal assessment tasks are marked and formally recorded by the teacher for progression and certification purposes. Formal assessment provides teachers with a systematic way of evaluating how well learners are progressing in a grade and in a particular subject.

The teacher can only observe about 10 learners at a time, therefore formal assessment tasks will happen mainly in small group focused sessions and it will take a few days to assess the whole class. All the materials and apparatus that learners normally use should be available as usual, (counters, number charts, etc.)

The forms of assessment used should be age and developmental level appropriate. Formal assessments must cater for a range of cognitive levels and abilities of learners. The design of these tasks should cover the content of the subject in a variety of ways.

A variety of forms of assessment (observation, oral, practical and written) should be used to give each learner the opportunity to demonstrate what he or she can do. This is because some learners are more easily able to show what they know in some forms of assessment. For example,

- Some learners who find it difficult to read are good at Mathematics.
- Other learners may not be at the required level of competence in the language of learning and teaching.

Assessment tasks in Mathematics need to include activities and exercises that are not language based, and not reading dependent, to reflect the real abilities of these learners.

However, cognisance should also be taken of what is being assessed. Certain knowledge and skills are best assessed with particular forms of assessment. Different kinds of assessments are appropriate to the skills and concepts necessary for different topics at different age groups. It is useful to use an observation checklist to assess learners measuring in the early grades. Rubrics can be used to evaluate learner's problem solving skills.

4.4 PROGRAMME OF FORMAL ASSESSMENT

The requirements for formal assessment of Mathematics in Grades 1 - 3 are spelt out in the table below:

	TERM 1	TERM 2	TERM 3	TERM 4	TOTAL
Grade 1	2	2	2	1	7
Grade 2	2	2	2	2	8
Grade 3	2	3	3	2	10

Teachers are encouraged to conduct a baseline assessment in the first term. Learners' results in the baseline assessment should not be used to label their ability, but rather to decide how to pitch the initial activities and to assess what aspects of work need more attention. Learners develop at different rates. Some learners have a slow start, but at a later stage they may progress quickly in Mathematics.

Formal Mathematics assessment tasks include more than one topic in Mathematics. The assessment tasks over the year need to cover all content areas and topics, but not everything in the curriculum needs to be formally assessed or formally reported upon. Numbers, Operations and Relationships make up 60% of Mathematics in Grades 1 - 3. This means that 60% of the formal assessment each term and over the year should be focused on Numbers, Operations and Relationships.

Each formal assessment task should not be seen as a single event or test. Some of the criteria can be assessed at the same time, but others will be assessed at different times. For example, if learners' skip counting skills are being assessed, their ability to do the following could be assessed in the same exercise or event:

- Complete counting sequences
- Read and write number symbols
- Count.

However, if an assessment task contains both solving problems by grouping or sharing, and assessing learners' ability to measure capacity; it is more likely that these aspects of Mathematics will be assessed at different times and in different.

4.5 RECORDING AND REPORTING

Recording is a process in which the teacher documents the level of a learner's performance in a specific assessment task. It indicates learner progress towards the achievement of the knowledge as prescribed in the Curriculum and

Assessment Policy Statements. Records of learner performance should provide evidence of the learner’s conceptual progression within a grade and her/his readiness to progress or being promoted to the next grade. Records of learner performance should also be used to verify the progress made by teachers and learners in the teaching and learning process.

Reporting is a process of communicating learner performance to learners, parents, schools, and other stakeholders. Learner performance can be reported in a number of ways. These include report cards, parents’ meetings, school visitation days, parent-teacher conferences, phone calls, letters, class or school newsletters, etc. Teachers in all grades report in percentages against the subject. The various achievement levels and their corresponding percentage bands are as shown in the table below.

Codes and percentages for recording and reporting

Rating code	Description of competence	Percentage
7	Outstanding achievement	80 - 100
6	Meritorious achievement	70 - 79
5	Substantial achievement	60 - 69
4	Adequate achievement	50 - 59
3	Moderate achievement	40 - 49
2	Elementary achievement	30 - 39
1	Not achieved	0 - 29

4.6 MODERATION OF ASSESSMENT

Moderation refers to the process that ensures that the assessment tasks are fair, valid and reliable. Moderation should be implemented at school, district, provincial and national levels. Comprehensive and appropriate moderation practices must be in place for the quality assurance of all subject assessments.

4.7 GENERAL

This document should be read in conjunction with:

4.7.1 *National policy pertaining to the programme and promotion requirements of national Curriculum statement Grades R-12; and*

4.7.2 The policy document, *National Protocol for Assessment Grades R-12*

4.8 EXEMPLAR ASSESSMENT TASKS FOR GRADES 1 TO 3

Exemplar assessment checklists are given below. The aim is to assist teachers to plan and implement formal assessment in a continuous way.

GRADE 1				
Observation checklist for capacity/volume				
Content Area	Topic	Criteria	✓ or ✗	Comments
Measurement	Capacity/volume	Compare and order the amount of liquid (volume) in two containers placed next to each other.		
		Comparing volumes of two or more different-looking containers by pouring into a third container.		
		Record the capacity of containers by using non-standard measures, e.g. spoons and cups.		
		Answer questions about which container holds more.		
		Use language to talk about the comparison e.g. more than, less than, full, empty.		

GRADE 1				
Observation checklist for mass				
Content Area	Topic	Criteria	✓ or ✗	Comments
Measurement	Mass	Order and compare the mass of three or more objects, by placing pairs of objects on a balance, until all objects can be sequenced.		
		State the unit when giving the mass, e.g. the book has the same mass as 34 marbles.		
		Use language to talk about the comparison, e.g. light, heavy, lighter, heavier.		
		Ability to record measurements taken		

Using rubrics to assess problem-solving

Problem-solving can be assessed using a rubric.

What is considered to be an appropriate way of solving a problem,

- changes as learners develop and increase their understanding of number concept and their operational skills; and
- depends on both the number range in the problem and the nature of the problem.

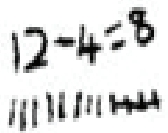

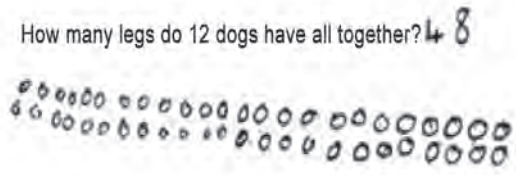

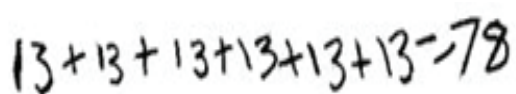

GRADE 1	
Rubric problem-solving	
Does not know where to start or does something inappropriate.	1
Understands problem and starts but cannot finish correctly.	2-3
Understands problem and solves using drawings (marks) or counters. Can explain. May make small errors.	4-5
Completes problem correctly. Can explain own and others' thinking competently.	6-7

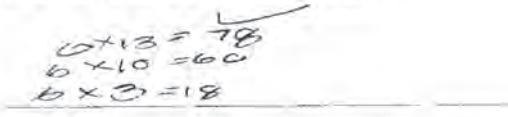

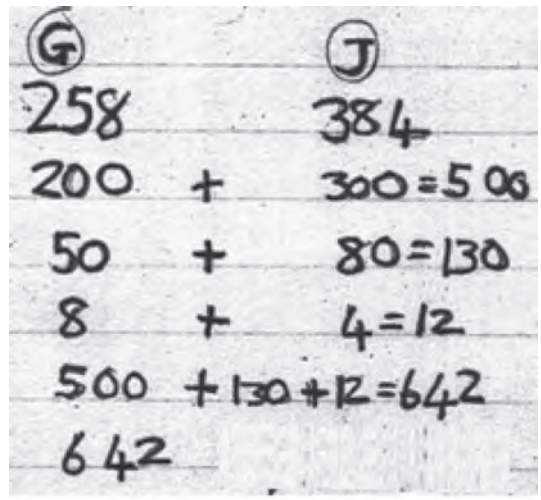

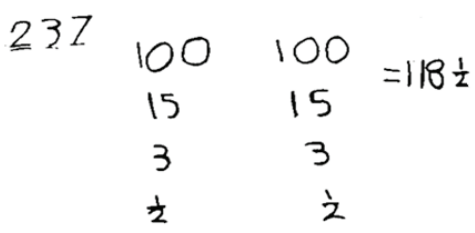

GRADE 2	
Rubric problem-solving	
Does not know where to start or does something inappropriate.	1
Understands problem and starts but cannot finish correctly or Understands problem and solves using drawings (marks) or counters only. *	2-3
Understands problem and solves using numbers, but makes small errors. Can explain.	4-5
Completes problem correctly using number knowledge and techniques like breaking down and recombining numbers, doubling, halving, number lines etc. Can explain own and others' thinking competently.	6-7

* The number range with which Grade 2 learners work begins to make it inefficient to calculate by drawing pictures and counting them. Learners' number sense needs to be sufficiently developed for them to use numbers in problem-solving and calculating.

GRADE 3	
Rubric problem-solving	
Does not know where to start or does something inappropriate.	1
Understands problem and starts but cannot finish correctly, or uses marks (drawings) or counters.	2-3
Understands problem and solves using numbers. Can explain.	4-5
Completes problem correctly using number knowledge and techniques like breaking down and recombining numbers, doubling, rounding and compensating, number lines etc appropriately. Can explain own and others' thinking competently.	6-7

Examples of how to apply this rubric to problems solved by Grade 1 - 3 learners

<i>A dog has 4 legs. How many legs do 12 dogs have?</i>	
	<p>Grade 1: Rating: 1.</p> <p>The learner does not understand the problem, so he or she uses an inappropriate strategy or operation.</p>
<p>One dog has 4 legs.</p> <p>How many legs do 12 dogs have all together? 48</p> 	<p>Grade 1: Rating 6</p> <p>The learner has understood the problem, solved the problem in an appropriate way for Grade 1 and can explain the problem.</p> <p>Grade 2: Rating 4</p> <p>The learner has understood and solved the problem. However, a grade 2 learner should be using number and operational symbols to add repeatedly (or multiply, depending on the time of year).</p>
<i>The farmer plants 6 rows of trees with 13 trees in each row. How many trees does he plant all together?</i>	
	<p>Grade 2 learner, Rating 6</p> <p>The learner has understood and solved the problem, using appropriate number and operational symbols for Grade 2.</p> <p>Grade 3 learner: Rating 4</p> <p>The learners have understood and solved the problem in an adequate way. However, they do not get an outstanding rating since they have not shown the techniques and operations available to Grade 3 learners i.e. multiplication using breaking down and recombining numbers: see below.</p>

<p>The farmer plants 6 rows of 13 trees. How many trees are there all together?</p> 	<p>Grade 3 learner: Rating 5</p> <p>Completes problem correctly using appropriate number and operational symbols as well as appropriate techniques like breaking down and recombining numbers. Can explain own and others' thinking competently.</p>
<p>Gino has 258 stickers and Josie has 384 stickers. How many stickers do they have altogether?</p>	
	<p>Grade 3: Rating: 5</p> <p>Completes problem correctly using number knowledge and techniques like breaking down and recombining numbers, doubling, rounding and compensating, number lines etc. appropriately. Can explain own and others' thinking competently.</p>
<p>What is half of 237?</p>	
	<p>Grade 3. Rating: 5</p> <p>Solves problem correctly using number knowledge and techniques like breaking down and recombining numbers, doubling, halving, rounding and compensating, number lines etc. appropriately. Can explain own and others' thinking competently.</p>

Grade 1 Term 1: Exemplar baseline assessment task

Type of activity	Criteria	✓ or ✗	Comments
Oral	Is the learner able to <ul style="list-style-type: none"> count out objects to 10? say which collection of objects is smallest/biggest? read number symbols to 5? 		
Practical	Is the learner able to <ul style="list-style-type: none"> sequence objects? copy a pattern? place objects in front of him/her? place objects behind him/her? sort objects according to one attribute? engage with a problem in order to find a solution? 		

Grade 1 Term 1: Exemplar Assessment Task 1

Content area	Topic	Criteria
Numbers, operations and relationships	Number Concept	Counts out 10 objects reliably, saying the names in sequence
		Writes and reads number symbols from 1 to 5
		Orders numbers 1 - 5 from smallest to greatest
		Uses language to describe relative size of numbers: before, after, between
	Solve Problems	Solves word problems in context involving addition, subtraction with answers up to 5 using apparatus or drawings and explains own solution to problems
		Solves practical problems involving equal sharing and grouping with whole numbers up to 5 and with answers that may include remainders by using apparatus or drawings Explains solutions
Calculations	Does addition up to 5 using apparatus or drawings	
	Does subtraction from any number 5 or fewer using apparatus or drawings	
Patterns, functions and algebra	Number Patterns	Completes number sequences of counting in ones up to 10 e.g. 1, 2, 3, 4, __, __, __, __, 9, 10
Space and shape (Geometry)	Position	Follows instructions to place one object in relation to another e.g. put the pencil inside the box; put the pencil on the right hand side of the box
	3-D	Recognises and names <ul style="list-style-type: none"> • ball shapes (spheres) • box shapes (prisms)
Measurement	Time	Describes when something happens using language e.g. morning, afternoon, night, early, late
	Length	Measures lengths, widths or heights using informal measures. States measurement in informal units
	Mass	Measures and compares mass of three or more objects using a balancing scale using informal measurements. Order the objects according to mass. Describes order using lighter, heavier, heaviest
Data handling	Sorting collections of objects	Collects and sorts everyday physical objects according to criteria given by teacher Draws a picture of the sorted objects or describes the sorted collection

Grade 1 Term 2: Exemplar Assessment Task 1

Content area	Topic	Criteria
Numbers, operations and relationships	Number Concept	Counts out 20 objects reliably, saying the names in sequence
		Says which of two given collections of objects is more or fewer where both collections are 10 or fewer
		Reads number symbols from up to 30
		Writes number symbols to 10
	Solve Problems	Solves word problems in context involving addition, subtraction with answers up to 10 using one of the following <ul style="list-style-type: none"> • apparatus • drawings • building up and breaking down numbers • number lines • doubling and halving and explains own solution to problems
	Calculations	Does addition up to 10 using one of the following <ul style="list-style-type: none"> • apparatus • drawings • building up and breaking down numbers • number lines • doubling and halving Writes a number sentence using +
Does subtraction from any number 10 or fewer using one of the following <ul style="list-style-type: none"> • apparatus • drawings • building up and breaking down numbers • number lines • doubling and halving Writes a number sentence using -		
Patterns, functions and algebra	Number Patterns	Completes number sequences of counting to 30 <ul style="list-style-type: none"> • in ones e.g. 20, 21, 22, 23, __, __, __, __, 28; __; 30. • in fives e.g. 5, 10, 15, __, __, 30,
	Geometric Patterns	Copies and extends a pattern <ul style="list-style-type: none"> • made by using one object but having the colours of the objects change in a regular way. or • made by using similar objects of different size
Space and shape (Geometry)	2-D	Identifies and names circles squares triangles

Grade 1 Term 2: Exemplar Assessment Task 2

Content area	Topic	Criteria
Numbers, operations and relationships	Number Concept	Counts forwards and backwards in 1s between 1 and 50
		Counts forward in 5s, 2s to 50
		Uses language to describe relative size of numbers: before, after, between
		Compare the size of numbers up to 10 using language e.g. more than, fewer than etc.
		Uses language to describe relative size of numbers: before, after, between
		Orders numbers 1 - 10 from smallest to greatest
		Reads number symbols from up to 50
	Solve Problems	Solves practical problems involving equal sharing and grouping with whole numbers up to 10 and with answers that may include remainders by one of the following <ul style="list-style-type: none"> • apparatus • drawings • number lines Explains solutions
	Solve Problems	Solves word problems in context involving repeated addition with answers up to 10 using one of the following <ul style="list-style-type: none"> • apparatus • drawings • building up and breaking down numbers • number lines • doubling and halving and explains own solution to problems
	Money	Recognises South African currency coins 5c, 10c, 20, 50c, R1, R2; R5
Solves money problems involving totals and change to R10 and in cents up to 20c cents		
Calculations	Does repeated addition up to 10 using one of the following <ul style="list-style-type: none"> • apparatus • drawings • building up and breaking down numbers • number lines • doubling and halving Writes a number sentence using +	
Patterns, functions and algebra	Number Patterns	Completes number sequences of counting <ul style="list-style-type: none"> • in ones back from 50 e.g. 50, 49, 48, __, __, 45, __, __, 42; __; 40. • in tens to 50 e.g. 10, 20, 30, __, __,
Measurement	Capacity/ Volume	Estimates, measures, compares, orders and records the capacity of containers by using non-standard measures e.g. spoons and cups
Data handling	Sorts collections of objects	Collects and sorts everyday physical objects according to criteria given by teacher Draws a picture of the sorted objects or describes the sorted collection

Grade 1 Term 3: Exemplar Assessment Task 1

Content area	Topic	Criteria
Numbers, operations and relationships	Number Concept	Counts out 40 objects reliably, saying the names in sequence
		Says which of two given collections of objects is more or fewer where both collections are 15 or fewer
		Reads number symbols from up to 70
		Writes number symbols to 20
	Solve Problems	<p>Solves word problems in context involving addition, subtraction with answers up to 15 using one of the following</p> <ul style="list-style-type: none"> • apparatus • drawings • building up and breaking down numbers • number lines • doubling and halving <p>and explains own solution to problems</p>
	Calculations	<p>Does addition up to 15 using one of the following</p> <ul style="list-style-type: none"> • apparatus • drawings • building up and breaking down numbers • number lines • doubling and halving <p>Writes a number sentence using +, =</p>
<p>Does subtraction from any number 15 or less using one of the following</p> <ul style="list-style-type: none"> • apparatus • drawings • building up and breaking down numbers • number lines • doubling and halving <p>Writes a number sentence using -, =</p>		
Patterns, functions and algebra	Number Patterns	<p>Completes number sequences of counting</p> <ul style="list-style-type: none"> • in ones. back from 60 e.g. 60, 59, 58, __, __, __, 54, __, __, 51. • in twos e.g. 44, 46, 48, __, __, __, 56; __, 60
	Geometric Patterns	Copies, extend and describes patterns where different shapes are used to make up a group, but the groups of objects are repeated in exactly the same way
Space and shape (Geometry)	3-D	<p>Recognises and names</p> <ul style="list-style-type: none"> • ball shapes (spheres) • box shapes (prisms)
		Sorts objects into those that roll and those that slide

Grade 1 Term 3: Exemplar Assessment Task 2

Content area	Topic	Criteria
Numbers, operations and relationships	Number Concept	Counts forwards in 10s, 5s, 2s to 80
		Uses language to describe relative size of numbers: before, after, between
		Compare the size of numbers up to 15 using language e.g. more than, fewer than etc
		Can split numbers 11 - 15 into 10 + ones e.g. $12 = 10 + 2$
	Solve Problems	Solves word problems in context involving repeated addition with answers up to 15 using one of the following <ul style="list-style-type: none"> • apparatus • drawings • building up and breaking down numbers • number lines • doubling and halving and explains own solution to problems
		Solves practical problems involving equal sharing and grouping with whole numbers up to 15 and with answers that can include remainders by one of the following <ul style="list-style-type: none"> • apparatus • drawings • number lines Explains solutions
Money	Recognises South African currency coins 5c, 10c, 20, 50c, R1, R2; R5	
	Solve money problems involving totals and change to R20 and in cents up to 20c cents	
Calculations	Does repeated addition up to 15 using one of the following <ul style="list-style-type: none"> • apparatus • drawings • building up and breaking down numbers • number lines • doubling and halving Writes a number sentence using +, =	
Patterns, functions and algebra	Number Patterns	Completes number sequences of counting <ul style="list-style-type: none"> • in ones back from 80 e.g. 80, 79, 78, __, __, __, __, 73, __; __; 70. • in tens to 80 e.g. 10, 20, 30, __, __, __, __, __. • in fives e.g. 5, 10, 15, __, __, 30, __, __. 45, __, __, 60, __, __, __, 80
Space and shape (Geometry)	Symmetry	Recognise and draw line of symmetry in 2-D geometrical and non-geometrical shapes
Measurement	Length	Estimate, measure, compare, order and record length using non-standard measures e.g. hand spans, paces, pencil lengths, counters, etc.
Data handling	Data	Answer questions about data in pictograph

Grade 1 Term 4: Exemplar Assessment Task 1

Content area	Topic	Criteria
Numbers, operations and relationships	Number Concept	Counts out 50 objects reliably, saying the names in sequence
		Says which of two given collections of objects is more or fewer where both collections are 20 or fewer
		Reads number symbols from up to 80
	Solve Problems	<p>Solves word problems in context involving addition, subtraction with answers up to 20 using one of the following</p> <ul style="list-style-type: none"> • apparatus • drawings • building up and breaking down numbers • number lines • doubling and halving <p>and explains own solution to problems</p>
Calculations	<p>Does addition up to 20 using one of the following</p> <ul style="list-style-type: none"> • apparatus • drawings • building up and breaking down numbers • number lines • doubling and halving <p>Writes a number sentence using +, =</p>	
	<p>Does subtraction from any number 20 or fewer using one of the following</p> <ul style="list-style-type: none"> • apparatus • drawings • building up and breaking down numbers • number lines • doubling and halving <p>Writes a number sentence using -, =</p>	
Patterns, functions and algebra	Number Patterns	<p>Completes number sequences of counting</p> <ul style="list-style-type: none"> • in ones e.g. back from 80: 80, 79, 78, __, __, __, 74, __, __, 71. • in twos e.g. 64, 66, 68, __, __, __, 76; __, 80
Space and shape (Geometry)	2-D	<p>Recognises and names</p> <ul style="list-style-type: none"> • circles • triangles • squares <p>Sorts according to whether round or straight sides</p>
Measurement	Mass	<ul style="list-style-type: none"> • Estimates, measures, compares, orders and record mass using non-standard measures and a balancing scale e.g. blocks, bricks, etc. • Uses language to talk about the comparison e.g. light, heavy, lighter, heavier

Grade 1 Term 4: Exemplar Assessment Task 2

Content area	Topic	Criteria
Numbers, operations and relationships	Number Concept	Counts forwards in 10s, 5s, 2s to 100
		Uses language to describe relative size of numbers: before, after, between
		Compare the size of numbers up to 20 using language e.g. more than, fewer than etc
		Orders numbers 1 - 20 from greatest to smallest
		Can split numbers 11 - 20 into 10 + ones e.g. $14 = 10 + 4$
		Reads number symbols from up to 100
		Writes number symbols to 20
	Solve Problems	<p>Solves word problems in context involving repeated addition with answers up to 20 using one of the following</p> <ul style="list-style-type: none"> • apparatus • drawings • building up and breaking down numbers • number lines • doubling and halving <p>and explains own solution to problems</p>
		<p>Solves practical problems involving equal sharing and grouping with whole numbers up to 20 and with answers that may include remainders by one of the following</p> <ul style="list-style-type: none"> • apparatus • drawings • number lines <p>Explains solutions</p>
	Money	Recognises South African currency coins 5c, 10c, 20, 50c, R1, R2; R5
Solves money problems involving totals and change to R20 and in cents up to 50c cents		
	Calculations	<p>Does repeated addition up to 20 using one of the following</p> <ul style="list-style-type: none"> • apparatus • drawings • building up and breaking down numbers • number lines • doubling and halving <p>Writes a number sentence using +, =</p>
Patterns, functions and Algebra	Number Patterns	<p>Completes number sequences of counting</p> <ul style="list-style-type: none"> • in ones backwards e.g. 99, 98, __, 96, __, __, __, 92, __; __; 89. • in tens to 100 e.g. 10, 20, 30, __, __, __, __, __, 90, __. <p>in fives e.g. 20, 25, 30, __, __, 45, __, __, 60, __, 70, __, __, 90</p>
Space and Shape (Geometry)	Position	Applies language of position to follow directions to move around the classroom
		Matches different views of the same object
Measurement	Time	<p>Knows days of week</p> <p>Knows months of year</p>
Data handling	Data	Answers questions about data in pictograph

Grade 2 Term 1: Exemplar Assessment Task 1

Content area	Topic	Criteria
Numbers, operations and relationship	Number Concept	Groups and counts up to 100 objects
		Compares and orders whole numbers up to 25
		Decomposes two-digit numbers up to 25 into tens and ones e.g. $23 = 20 + 3$
		Reads and writes number symbols from 0 to 100
	Solve Problems	<p>Solves word problems in context involving addition, subtraction with answers up to 20 using one of the following</p> <ul style="list-style-type: none"> • apparatus • drawings • building up and breaking down numbers • number lines • doubling and halving <p>and explains own solution to problems</p>
	Money	Recognises South African currency coins 5c, 10c, 20, 50c, R1, R2; R5 and notes R10, R20, R50
Solves money problems involving totals and change to R20 and in cents up to 50c cents		
Calculations	<p>Does addition up to 20 using one of the following</p> <ul style="list-style-type: none"> • apparatus • drawings • building up and breaking down numbers • number lines • doubling and halving <p>Writes a number sentence using +, =</p>	
	<p>Does subtraction up to 20 using one of the following</p> <ul style="list-style-type: none"> • apparatus • drawings • building up and breaking down numbers • number lines • doubling and halving <p>Writes a number sentence using +, =</p>	
Patterns, functions and Algebra	Number Patterns	<p>Completes number sequences of counting forwards and backwards</p> <ul style="list-style-type: none"> • in ones from 0 - 100 e.g. 99, 98, 97, __, __, __, 93, __, 91, 90 • in tens from 0 - 100 e.g. 10, 20, 30, __, __, __, 70, __, __, 100 • in twos from 0 - 100 e.g. 80, 82, 84, __, __, 90, __, __, __, __, 100
Space and shape (Geometry)	3-D	<p>Recognises and names</p> <ul style="list-style-type: none"> • ball shapes (spheres) • box shapes (prisms)
	2-D shapes	<p>Recognises and names</p> <p>circles, triangles, squares and rectangles</p>
Measurement	Time	Tells time on analogue clock in hours
	Length	Estimates, measures, compares, orders and records lengths, widths or heights in metres

Grade 2 Term 2: Exemplar Assessment Task 1

Content area	Topic	Criteria
Numbers, operations and relationships	Number Concept	Counts pictures of grouped objects up to 150
		Compares numbers up to 50
Reads and writes numbers from 0 - 150		
Counts forwards and backwards in 10s, 2s, 5s to 150		
	Solve Problems	<p>Solves practical problems involving equal sharing and grouping with whole numbers up to 50 using one of the following</p> <ul style="list-style-type: none"> • apparatus • drawings • building up and breaking down numbers • number lines • doubling and halving <p>and explains own solution to problems</p>
Patterns, functions and algebra	Number Patterns	<p>Completes number sequences of counting forwards and backwards in ones from 0 - 150 e.g. 131, 132, 133, __, __, __, 137, __, __, __, 141</p> <ul style="list-style-type: none"> • in tens between 0 & 200 e.g. 150, 140, 130, __, __, 100, __, __, 70, __, __, 40 • counting in twos e.g. 150, 148, 146, 144, __, __, 138, __, __, 132. • counting in fives from 0 - 150 e.g. 105, 110, 115, __, __, __, 135, __, __, 150
		Copies, extends and describes patterns where different shapes are used to make up a group, but the groups of shapes are repeated in exactly the same way
Measurement	Time	Tells time on analogue clock in hours and half hours

Grade 2 Term 2: Exemplar Assessment Task 2

Content area	Topic	Criteria
Numbers, operations and relationships	Number Concept	Counts forwards in 3s, 4s
	Solve Problems	Solves and explains solutions to problems that involve equal sharing that lead to fractions
	Fractions	Recognises and uses halves, thirds, quarters, fifths in familiar contexts
		Recognises fractions in diagrammatic form
		Writes fractions in form 1 half, 1 third etc
	Calculations	Does addition up to 50 using one of the following <ul style="list-style-type: none"> • apparatus • drawings • building up and breaking down numbers • number lines • doubling and halving Writes a number sentence using +, =
Does subtraction up to 50 using one of the following <ul style="list-style-type: none"> • apparatus • drawings • building up and breaking down numbers • number lines • doubling and halving Writes a number sentence using -, =		
Patterns, functions and algebra	Number Patterns	Completes number sequences between 0 & 150 <ul style="list-style-type: none"> • counting in ones • counting in fours e.g. 4, 8, 12 __, __, 24, __, 32, __, __, __, 48 • counting in threes e.g. 3, 6, 9, __, __, 21, __, __, __, 33, 36.
Measurement	Mass	Estimates, measures, compares, orders and records mass using non-standard measures and a balancing scale e.g. blocks, bricks, etc.
		Orders products on which the mass is written in kilograms

Grade 2 Term 3: Exemplar Assessment Task 1

Content area	Topic	Criteria
Numbers, operations and relationships	Number Concept	Counts up to 180 pictures of grouped objects
		Compares and orders numbers up to 75
		Reads and writes number symbols up to 180
		Counts forwards and backwards in 2s, 10s, 5s between 0 & 180
		Decomposes two-digit numbers up to 75 into tens and ones e.g. $48 = 40 + 8$
	Solve Problems	<p>Solves word problems in context involving repeated addition leading to multiplication up to 40</p> <p>using one of the following</p> <ul style="list-style-type: none"> • apparatus • drawings • building up and breaking down numbers • number lines • doubling and halving <p>and explains own solution to problems</p>
	Calculations	<p>Can multiply the numbers 1 - 10 by 5, 4</p> <p>using one of the following</p> <ul style="list-style-type: none"> • apparatus • drawings • number lines <p>Writes a number sentence using $x, =$</p>
Patterns, functions and algebra	Number Patterns	<p>Completes number sequences of</p> <ul style="list-style-type: none"> • counting forwards and backwards in ones between 0 & 180 e.g. • 180, 170, 160, __, __, 120, __, __ 90, • counting in twos e.g. 150, 152, 154, __, 156, __, 160, __, __, 166 • counting in fives from 0 - 150 e.g. 120, 125, 130, 135, __, __, __, 155, __, __, 170, __, 180
Space and shape (Geometry)	Position	Applies language of position to follow directions to move around the classroom

Grade 2 Term 3: Exemplar Assessment Task 2

Content area	Topic	Criteria
Numbers, operations and relationships	Number Concept	Counts forwards in 4s, 3s
	Solve Problems	Solves and explains solutions to problems that involve equal sharing that lead to fractions
	Fractions	Recognises and uses halves, thirds, quarters, fifths in familiar contexts
		Recognises fractions in diagrammatic form
	Writes fractions in form 1 half, 1 third etc	
Patterns, functions and algebra	Number Patterns	<p>Completes number sequences between 0 & 180</p> <ul style="list-style-type: none"> counting in ones counting in fours e.g. 104, 108, 112 __, __, 124, __, 132, __, __, __, 148 counting in threes e.g. 103, 106, 109, __, __, 121, __, __, __, 133, 136.
	Geometric Patterns	Copies, extends and describes a geometric pattern in which the same shapes occur, but the number of each kind of shape increases or decreases in a regular way
Space and shape (Geometry)	Position	Matches different views of the same object
	2-D shapes	Recognises and names circles, triangles, squares and rectangles
Sorts shapes into those with straight sides and those with round sides		
Measurement	Capacity/ Volume	Estimates, measures, compares, orders and records the capacity of containers by using non-standard measures e.g. spoons and cups
	Time	Reads analogue time in hours, half hours or quarter hours
Uses a calendar to calculate length of time in days or weeks		
Data handling	Data	Constructs a pictograph on blocked paper when given the data

Grade 2 Term 4: Exemplar Assessment Task 1

Content area	Topic	Criteria
Numbers, operations and relationships	Number Concept	Counts pictures of grouped objects up to 200
		Orders and compares numbers to 99
	Solve Problems	Solves word problems in context that involve grouping or sharing up to 99 with answers that include remainder in using one of the following <ul style="list-style-type: none"> • apparatus • drawings • building up and breaking down numbers • number lines • doubling and halving and explains own solution to problems
Money		Recognises South African currency coins 5c, 10c, 20, 50c, R1, R2; R5 and notes R10, R20, R50
		Solves money problems involving totals and change to R99 and in cents up to 95c cents
Patterns, functions and algebra	Number Patterns	Completes number sequences of counting forwards and backwards <ul style="list-style-type: none"> • in ones between 0 and 200 • in tens between 0 and 200 e.g. 130, 140, 150, __, __, __, __, 200
Space and shape (Geometry)	2-D	Recognises and names <ul style="list-style-type: none"> • circles • triangles • squares • rectangles Sorts according to whether round or straight sides
Measurement	Time	Uses a clock to calculate length of time passes in hours, half hours or quarter hours

Grade 2 Term 4: Exemplar Assessment Task 2

Content area	Topic	Criteria
Numbers, operations and relationships	Number Concept	Counts forwards and backwards in 2s, 5s to 200
		Reads and writes number symbols from up to 200
	Calculations	Does addition up to 99 using one of the following <ul style="list-style-type: none"> • apparatus • drawings • building up and breaking down numbers • number lines • doubling and halving Writes a number sentence using +, =
		Does subtraction from any number 99 or fewer using one of the following <ul style="list-style-type: none"> • apparatus • drawings • building up and breaking down numbers • number lines • doubling and halving Writes a number sentence using -, =
Patterns, functions and algebra	Number Patterns	Completes number sequences between 0 & 200 <ul style="list-style-type: none"> • counting in twos e.g. 160, 162, 164, __, 166, __, 170, __, __, 176, __, 180 • counting in fives from 0 - 200 e.g. 160, 165, 170, __, __, __, 190__, 200
Data handling	Data	Answers questions about data in pictograph

Grade 2 Term 4: Exemplar Assessment Task 3

Content area	Topic	Criteria
Numbers, operations and relationships	Number Concept	Counts forwards in 4s, 3s
	Solve Problems	Solves word problems in context involving repeated addition leading to multiplication with answers up to 50 using one of the following <ul style="list-style-type: none"> • apparatus • drawings • building up and breaking down numbers • number lines • doubling and halving and explains own solution to problems
	Calculations	Can multiply the numbers 1 - 10 by 3 using one of the following <ul style="list-style-type: none"> • apparatus • drawings • number lines • doubling Writes a number sentence using \times , $=$
Patterns, functions and algebra	Number Patterns	Completes number sequences between 0 and 180 <ul style="list-style-type: none"> • counting in ones • counting back in fours e.g. 48,44, 40 __, __, 28, __, __, 16, __, __, 0 • counting back in threes e.g. 36, 33, 30, __, __, 21, 18, __, __, 9, __, __, 0.
Space and shape (Geometry)	3-D	Recognises and names <ul style="list-style-type: none"> • ball shapes (spheres) • box shapes (prisms) • cylinders Sorts objects into those that roll and those that slide
	Symmetry	Recognises and draws line of symmetry in 2-D geometrical and non-geometrical shapes
Measurement	Capacity/ Volume	Orders everyday products whose capacity is written on them in litres
		Reads volume in litres from pictures of measuring jugs

Grade 3 Term 1: Exemplar Assessment Task 1

Content area	Topic	Criteria
Numbers, operations and relationship	Number Concept	Groups and counts up to 200 objects
		Compares and orders whole numbers up to 99
		Reads and writes number symbols from 0 to 500
		Decomposes two-digit numbers up to 99 into tens and ones e.g. $78 = 70 + 8$
	Solve Problems	<p>Solves word problems in context involving addition, subtraction with answers up to 99 using one of the following</p> <ul style="list-style-type: none"> building up and breaking down numbers number lines doubling and halving rounding off to 10 <p>and explains own solution to problems</p>
Money	Solves money problems involving totals and change in rands or in cents	
Calculations		<p>Does addition up to 99 using one of the following</p> <ul style="list-style-type: none"> building up and breaking down numbers number lines doubling and halving rounding off to 10 <p>Writes a number sentence using $+$, $=$</p>
		<p>Does subtraction up to 99 using one of the following</p> <ul style="list-style-type: none"> building up and breaking down numbers number lines doubling and halving rounding off to 10 <p>Writes a number sentence using $+$, $=$</p>
Patterns, functions and algebra	Number Patterns	<p>Completes number sequences of counting forwards and backwards</p> <ul style="list-style-type: none"> in ones between 0 and 200 e.g. 199, 198, 197, __, __, __, 13, __, 191, 190 in tens between 0 and 200 e.g. 110, 120, 130, __, __, __, 170, __, __, 200 in hundreds between 0 and 500 e.g. 100, 200, 300, __, __, in fives between 0 and 200 e.g. 150, 155, 160, __, __, __, 180, __, __, 195, __ in twos between 0 and 200 e.g. 180, 182, 184, __, __, 190, __, __, __, __, 200
Space and shape (Geometry)	2-D shapes	<p>Recognises and names circles, triangles, squares and rectangles</p>
		Sorts shapes into those with straight sides and those with round sides
Measurement	Time	Reads dates on a calendar
		Tells time on analogue clock in hours, half hours and quarter hours
	Capacity/ Volume	<p>Estimates, measures, compares, orders and records the capacity of containers by using non-standard measures e.g. spoons and cups</p> <p>Orders everyday products whose capacity is written on them in millilitres</p>

Grade 3 Term 2: Exemplar Assessment Task 1

Content area	Topic	Criteria
Numbers, operations and relationships	Number Concept	Counts pictures of grouped objects (e.g. grouped in 10s, 25s, 50s or 100s) up to 500
		Orders and compares numbers up to 500
		Reads and write numbers from 0 - 1 000
	Solve Problems	Solves practical problems involving equal sharing and grouping with whole numbers up to 75 using one of the following <ul style="list-style-type: none"> • building up and breaking down numbers • number lines • doubling and halving • rounding off to 10 and explains own solution to problems
	Calculations	Divides numbers to 50 by 2, 5, 10
Patterns, functions and algebra	Number Patterns	Completes number sequences of counting forwards and backwards <ul style="list-style-type: none"> • in ones between 0 and 500 e.g. 389, 399, 400,, __, __, __, 404, __, __, __, 408 • in tens between 0 and 500 e.g. 300, 310, 320, __, __, 350, __, __.370, __, __, 400 • in hundreds between 0 and 1 000 e.g. 1000, 900, 800, __, __, 500, __, __.200, __, 0
Space and shape (Geometry)	3-D objects	Recognises and names <ul style="list-style-type: none"> • ball shapes (spheres) • box shapes (prisms) • cylinders
		Sorts objects into those that have curved and those that have flat surfaces
Measurement	Length	Estimates, measures, orders and compares lengths, heights and widths using informal measures
		Estimates, measures, orders and compares length using metres

Grade 3 Term 2: Exemplar Assessment Task 2

Content area	Topic	Criteria
Numbers, operations and relationships	Number Concept	Counts forwards and backwards in 2s, 4s or 3s to 500
	Calculations	Does addition up to 400 using one of the following <ul style="list-style-type: none"> • building up and breaking down numbers • number lines • doubling and halving • rounding off to 10 Writes a number sentence using +, =
		Does subtraction from 400 or fewer using one of the following <ul style="list-style-type: none"> • building up and breaking down numbers • number lines • doubling and halving • rounding off to 10 Writes a number sentence using -, =
Patterns, functions and algebra	Number Patterns	Completes number sequences of <ul style="list-style-type: none"> • counting in twos between 0 and 500 e.g. 450, 448, 446, 444, __, __, 438, __, __, 432. • counting in fours between 0 and 500 e.g. 404, 408, 412 __, __, 424, __, 432, __, __, __, 448 • counting in threes between 0 and 500 e.g. 403, 406, 409, __, __, 421, __, __, __, 433, 436.
	Geometric Patterns	Copies, extends and describes patterns where different shapes are used to make up a group, but the groups of shapes are repeated in exactly the same way

Grade 3 Term 2: Exemplar Assessment Task 3

Content area	Topic	Criteria
Numbers, operations and relationships	Number Concept	Counts forwards in 5s, 50s, 100s between 0 and 500
		Decomposes three-digit numbers into hundreds, tens and ones e.g. $247 = 200 + 40 + 7$
	Solve Problems	Solves and explains solutions to problems that involve equal sharing that lead to fractions
	Fractions	Recognises and uses halves, quarters, eighths, thirds, sixths, fifths in familiar contexts
Recognises fractions in diagrammatic form		
Writes fractions in form 1 half, 2 thirds etc		
Patterns, functions and algebra	Number Patterns	Completes number sequences <ul style="list-style-type: none"> • counting in fives between 0 - 500 e.g. 105, 110, 115, __, __, __, 135, __, __, 150 • counting in fifties between 0 - 1000 e.g. 550, 600, 650, __, __, 800, __, __, __, 1 000,
Space and shape (Geometry)	Position and directions	Follows directions to move around school
		Gives directions to move around school
Measurement	Mass	Estimates, measures, compare orders and records mass using non-standard measures and a balancing scale e.g. blocks, bricks, etc.
		Orders products on which the mass is written in grams

Grade 3 Term 3: Exemplar Assessment Task 1

Content area	Topic	Criteria
Numbers, operations and relationships	Number Concept	Counts up to 750 pictures of grouped objects (e.g. grouped into 20s, 25s, 50, or 100s)
		Compares and order numbers up to 750
		Reads and writes number symbols up to 1 00
	Solve Problems	Solves word problems in context involving multiplication up to 75 using one of the following <ul style="list-style-type: none"> • building up and breaking down numbers • number lines • doubling and halving • rounding off to 10 and explains own solution to problems
	Calculations	Can multiply by 2, 5, 10 to a total of 99 using one of the following <ul style="list-style-type: none"> • apparatus • drawings • number lines Writes a number sentence using $x, =$
Patterns, functions and algebra	Number Patterns	Completes number sequences of counting forwards and backwards <ul style="list-style-type: none"> • in ones between 0 and 750 e.g. 665, 666, 667, __, __, __, 671, __, __, __, 675 __, __, 678 • in tens between 0 and 750 e.g. 650, 660, 670, __, __, 700, __, __, 730, __, __, 760 • in hundreds between 0 and 1 000 e.g. 0, 100, 200, __, __, 500, __, __, 800, __, 1 000

Grade 3 Term 3: Exemplar Assessment Task 2

Content area	Topic	Criteria
Numbers, operations and relationships	Number Concept	Counts forwards and backwards in 2s, 20s, 4s, 3s to 750
		Decompose three-digit numbers up to 750 into hundreds, tens and ones e.g. $648 = 600 + 40 + 8$
	Calculations	Can multiply by 3, 4 to a total of 99 using one of the following <ul style="list-style-type: none"> • apparatus • drawings • number lines • doubling Writes a number sentence using $x, =$
Patterns, functions and algebra	Number Patterns	Completes number sequences of <ul style="list-style-type: none"> • counting in twos between 0 & 750 e.g. 750, 749, 748, __, __, 445, __, __, 742. • counting in twenties between 0 & 1000 e.g. 800, 820, 840, 860, __, __, 920, __, __, 980 • counting in fours between 0 & 750 e.g. 704, 708, 712 __, __, 724, __, 732, __, __, __, 748 • counting in threes between 0 & 750 e.g. 630, 633, 639, 641, __, __, 650, __, __, __, 661
	Geometric Patterns	Copies, extends and describes a geometric pattern in which the same shapes occur, but the number of each kind of shape increases or decreases in a regular way
Space and shape (Geometry)	2-D shapes	Recognises and names circles, triangles, squares and rectangles
		Draws circles, squares, rectangles, triangles
Data handling	Data	Constructs a bar graph on blocked paper when given the data.

Grade 3 Term 3: Exemplar Assessment Task 3

Content area	Topic	Criteria
Numbers, operations and relationships	Number Concept	Counts forwards in 5s, 50s, 25s to 750
	Solve Problems	Solves and explains solutions to problems that involve equal sharing that lead to fractions
	Fractions	Recognises and uses halves, quarters, eights, thirds, sixths, fifths in familiar contexts
		Recognises fractions in diagrammatic form
		Recognises that 2 halves make a whole
	Writes fractions in form 1 half, 1 third etc	
Patterns, functions and algebra	Number Patterns	<p>Completes number sequences</p> <ul style="list-style-type: none"> counting in fives between 0 - 750 e.g. 705, 710, 715, __, __, __, 735, __, __, 750 counting in fifties between 0 - 1000 e.g. 1 000, 950, 800, __, __, 650, __, __, __, 450, counting in twenty-fives between 0 - 1000 e.g. 525, 550, 575, __, __, 650, __, __, __, 750
Space and shape (Geometry)	Position	Follows directions to move from place to place on an informal map
Measurement	Time	Tells time on digital clock in hours and minutes
		Uses a calendar to calculate length of time in days or weeks

Grade 3 Term 4: Exemplar Assessment Task 1

Content area	Topic	Criteria
Numbers, operations and relationships	Number Concept	Counts pictures of grouped objects up to 1 000
		Orders and compares numbers to 999
	Solve Problems	<p>Solves word problems in context that involve grouping or sharing up to 100 with answers that include remainders using one of the following</p> <ul style="list-style-type: none"> building up and breaking down numbers number lines doubling and halving rounding off to 10 <p>and explains own solution to problems</p>
	Calculations	Divides numbers to 99 by 2, 4, 5, 10, 3
	Money	Solves money problems involving totals and change in rands or in cents
Patterns, functions and algebra	Number Patterns	<p>Completes number sequences of counting forwards and backwards</p> <ul style="list-style-type: none"> in ones between 0 & 1000 e.g. 889, 890, 891, __, __, __, 895 __, __, __, 889 __, __, 892 in tens between 0 & 1000 e.g. 1000, 990, 980 __, __, 950, __, __, 920, __, __, 890
Measurement	Time	Uses a clock to calculate length of time passes in hours and minutes

Grade 3 Term 4: Exemplar Assessment Task 2

Content area	Topic	Criteria
Numbers, operations and relationships	Number Concept	Counts forwards and backwards in 2s, 4s, 3s to 1 000
		Reads and writes number symbols from up to 1 000
	Calculations	Does addition up to 999 using one of the following <ul style="list-style-type: none"> • building up and breaking down numbers • number lines • doubling and halving • rounding off to 10 Writes a number sentence using +, =
		Does subtraction from any number 999 or fewer using one of the following <ul style="list-style-type: none"> • building up and breaking down numbers • number lines • doubling and halving • rounding off to 10 Writes a number sentence using -, =
Patterns, functions and algebra	Number Patterns	Completes number sequences of <ul style="list-style-type: none"> • counting in twos between 0 and 1 000 e.g. 1000, 998, 996, __, __, 990, __, __, 984 • counting in fours between 0 and 1 000 e.g. 840, 844, 852 __, __, 864, __, 872, __, __, __, 894 • counting in threes between 0 and 1 000 e.g. 960,963, 966, 969, 971, __, __,980, __, __, __, 691
Space and shape (Geometry)	Symmetry	Recognises and draw line of symmetry in 2-D geometrical and non geometrical shapes
Data handling	Data	Answers questions about data in pictograph

Grade 3 Term 4: Exemplar Assessment Task 3

Content area	Topic	Criteria
Numbers, operations and relationships	Number Concept	Counts forwards in 5s, 50s, 25s between 0 and 1 000
	Solve Problems	Solves word problems in context involving repeated addition leading to multiplication with answers up to 50 using one of the following <ul style="list-style-type: none"> • apparatus • drawings • building up and breaking down numbers • number lines • doubling and halving and explains own solution to problems
	Calculations	Can multiply by 3 up to 99 using one of the following <ul style="list-style-type: none"> • apparatus • drawings • number lines • doubling Writes a number sentence using $x, =$
Patterns, functions and algebra	Number Patterns	Completes number sequences <ul style="list-style-type: none"> • counting in fives between 0 - 1000 e.g. 1 000, 995, 990, 985, __, __, __, 965, __, __, 950 • counting in fifties between 0 - 1000 e.g. 600, 650, 700, __, __, 850, __, __, __, • counting in twenty-fives between 0 - 1000 e.g. 1 000, 975, 950, __, __, 875, __, __, __, 775
Space and shape (Geometry)	3-D	Recognises and names <ul style="list-style-type: none"> • ball shapes (spheres) • box shapes (prisms) • cylinders • pyramids • cones
		Sorts objects into those with flat and those with curved surfaces
		Identifies the 2-D shapes that make up flat surfaces on 3-D objects mentioned above
Measurement	Capacity/ Volume	Reads volume in litres from pictures of measuring jugs
		Reads volume in millilitres from pictures of measuring jugs
